The Distribution of Wealth - Growing Inequality? Michael Schneider, Mike Pottenger, J.E. King, 2016-11-25 This book answers a number of important questions about the distribution of wealth among people and the way that this distribution has changed over time It provides a comprehensive analysis of the personal distribution of wealth from many dimensions economic statistical ethical political sociological and legal Using data from 21 countries this book demonstrates how inequality in the distribution of wealth varies between different parts of the world and how it evolves with particular emphasis on the claim that there has been a long term and continued increase in inequality since the 1970s in most countries It discusses alternative ways of measuring the degree of inequality analyses Thomas Piketty's claim that society has become more unequal in recent decades and assesses the relative importance of the various determinants of the distribution of wealth The authors explain why the distribution of wealth is unequal and discuss how it could be changed with alternative policies and the possible consequences of these policies for economic efficiency The authors also compare the different distributions of wealth that are implied by alternative views of society This is a valuable resource for students and academics in economics political science and sociology seeking a state of the art account of the theory and evidence surrounding inequality in the distribution of wealth

New Perspectives on Income Inequality in BC Marc Lee, 2004 We consider the changes in BC inequality in a number of different ways broad trends using the gini coefficient the most common summary index of inequality changes in incomes for different income groups the shares of income accruing to each income group and the ratio of incomes at the top bottom and middle of the distribution A large part of the increase in inequality stems from the near collapse of incomes at the bottom of the distribution If changes in inequality appear more at the top or bottom of the distribution they may not be adequately captured by the gini 3 This paper also examines changes in the average income of different income groups over time and the ratio of the average income at the top bottom and middle of the distribution For the bottom five vingtiles 25% of the population the absolute decline in income not shown was greater after taxes and transfers than it was for market income 7 To further illustrate the changes over time Figure 4a shows that the changes in average income for the bottom vingtile are not aberrations for the year 2000 As a result of the gains at the top and losses at the bottom the ratio of market incomes of the top vingtile to the bottom vingtile grew dramatically over the 1992 2000 period

China, India and Southeast Asia Edmund Terence Gomez, Kee Cheok

Cheong,Vamsi Vakulabharanam,2018-12-07 This volume studies the outcomes of the two way flow of investments and people between China and India and Southeast Asia These cross border flows have led to new settlements in Southeast Asia from which new outlooks have emerged among locally born generations that have given rise to new forms of solidarity and identification The advent of new generations of ethnic Chinese and Indians in Southeast Asia with no ties to China or India has spawned important debates about identity shifts which have not been registered by government leaders in Southeast Asia China and India as reflected in policy statements and investment patterns Identity changes are assessed in forms where they best manifest themselves in social life and in business ventures forged or unsuccessfully nurtured through tie ups involving foreign and domestic capital A state society distinction is employed to determine how the governments of these rapidly developing countries envision development through state intervention as well as with the employment of highly entrepreneurial ethnic groups and the outcomes of this on their societies and on their economies The chapters were originally published as a special issue in The Round Table Regional Economic Outlook, April 2017, Asia and Pacific

Mr.Ranil M Salgado,2017-05-08 The Asia Pacific region continues to be the world leader in growth and recent data point to a pickup in momentum We expect the region to expand by 5.5 percent in 2017 up from 5.3 percent in 2016 Accommodative policies will underpin domestic demand offsetting tighter global financial conditions However the risks to the outlook on balance are slanted to the downside A possible shift toward protectionism in major trading partners could suppress Asia's trade while the continued tightening of global financial conditions and economic uncertainty could trigger capital flow volatility A bumpier than expected transition in China would also have large negative spillovers to the region Beyond the short term many parts of Asia face secular headwinds from population aging and slow productivity growth These challenges call for domestic policies that support growth while boosting resilience and inclusiveness To sustain long term growth structural reforms are needed to deal with challenges from demographic transition and to boost productivity
