New Risks: Issues and Management Louis A. Cox,Paolo F. Ricci,2013-06-29 This volume contains the proceedings of the 1986 annual meeting and conference of the Society for Risk Analysis It provides a detailed view of both mature disciplines and emerging areas within the fields of health safety and environmental risk analysis as they existed in 1986 In selecting and organizing topics for this conference we sought both i to identify and include new ideas and application areas that would be of lasting interest to risk analysts and to users of risk analysis results and ii to include innovative methods and applications in established areas of risk analysis In the three years since the conference many of the topics presented there for the first time to a broad risk analysis audience have become well developed and sometimes hotly debated areas of applied risk research Several such as the public health hazards from indoor air pollutants radon in the home high voltage electric fields and the AIDS epidemic have been the subjects of headlines since 1986 Older areas such as hazardous waste site ranking and remediation air emissions dispersion modeling and exposure assessment transportation safety seismic and nuclear risk assessment and occupational safety in the chemical industry have continued to receive new treatments and to benefit from advances in quantitative risk assessment methods as documented in the theoretical and methodological papers in this volume A theme of the meeting was the importance of new technologies and the new and uncertain risks that they create

Liability Robert E. Litan,Clifford Winston,2010-12-01 The United States has recently witnessed an explosion of personal injury lawsuits involving medical malpractice unsafe products and widespread environmental hazards Jury awards and out of court settlements have escalated in many cases to hundreds of thousands of dollars At the same time premiums for liability insurance have skyrocketed As a result physicians have cut back services and some municipalities and businesses have been denied liability coverage altogether Some experts claim that only fundamental reform of the nation s civil justice system will end this insurance crisis But critics of such wholesale judicial reform contend that the insurance industry has

launched a tort reform campaign to cover its own past underwriting mistakes Liability brings together economists and experts in liability law and the insurance industry to assess the merits of the conflicting positions and to formulate sound public policy Led by Robert Litan and Clifford Winston the contributors describe the major changes that have contributed to the insurance crunch and set forth a methodological framework for evaluating the debate over the current liability system They conclude that increases in premiums and cutbacks in coverage have been real but selective that the forces in the judicial system responsible for rising liability costs are not readily subject to change and that we know too little about the cost and benefits of the current tort system to replace it with an alternative compensation program
