For the next half century hospitals coped with relentlessly escalating demands for accessibility by both medical indigents and a new clientele of patients able and willing to pay for hospitalization. With limited statutory revenues and unpredictable voluntary support, hospitals taxed paying patients through ever increasing user fees, offering in return privacy, comfort, service, and medical attendance in private and semi-private wards that were more appealing to middle class patients than the stark and grudging service of the public wards.

**J.B. Collip and the Development of Medical Research in Canada** Alison Li, 2003-10-27. In the early years of the twentieth century, medical research in Canada was the job of a select few. By mid-century, it had grown into a systematic, large-scale venture that involved teams of professional scientists and dozens of laboratories in universities, government, and industry. J. B. Collip, skilled both as a bench scientist and an entrepreneur, played a leading role in this transformation. In *J. B. Collip and the Development of Medical Research in Canada*, Alison Li details how Collip leapt into prominence in 1921-22 as part of the team at the University of Toronto that isolated insulin. When the Nobel Prize was awarded to Frederick Banting and J. J. R. Macleod in 1923, Banting announced he was sharing his award with Charles Best; Macleod, in turn, announced he was sharing his award with Collip. Collip was known for his remarkable skills in making hormone extracts, many of which proved to have therapeutic and therefore commercial value. At McGill University in the 1930s, he headed a thriving research group that carried out investigations of the pituitary and sex hormones, including development of one of the first orally active estrogen products. Collip's story sheds light on early negotiations between academic science and the pharmaceutical industry and on the complexities of sustaining a research laboratory before the rise of government funding. As the head of the National Research Council's medical research division during its formative years, Collip helped shape the foundations of organized support for medical research in Canada.

**SARS Unmasked** Michael G. Tyshenko, Cathy Paterson, 2010-03-19. Severe Acute Respiratory Syndrome (SARS) was the first global pandemic of the twenty-first century, spreading within weeks from southern China to over thirty-seven countries around the world. In Canada, intense news media coverage had a profound impact on how the disease was perceived, with frontline health care workers, despite their heroic efforts, stigmatized due to their contact with patients.

**Expelling the Plague** Zlata Blazina Tomic, Vesna Blazina, 2015-04-17. A vibrant city state on the Adriatic sea, Dubrovnik, also known as Ragusa, was a hub for the international trade between Europe and the Ottoman Empire. As a result, the city suffered frequent outbreaks of plague. Through a comprehensive analysis of these epidemics in Dubrovnik, *Expelling the Plague* explores the increasingly sophisticated plague control regulations that were adopted by the city and implemented by its health officials. In 1377, Dubrovnik became the first city in the world to develop and implement quarantine legislation, and in 1390 it established the earliest recorded permanent Health Office. The city's preoccupation with plague control and the powers granted to its Health Office led to a rich archival record chronicling the city's experience of plague, its attempts to

safeguard public health and the social effects of its practices of quarantine prosecution and punishment These sources form the foundation of the authors analysis in particular the manuscript Libro deli Signori Chazamorbi 1500 30 a rare health record of the 1526 27 calamitous plague epidemic Teeming with real people across the spectrum including gravediggers laundresses and plague survivors it contains the testimonies collected during trial proceedings conducted by health officials against violators of public health regulations Outlining the contributions of Dubrovnik in conceiving and establishing early public health measures in Europe Expelling the Plague reveals how health concerns of the past greatly resemble contemporary anxieties about battling epidemics such as SARS avian flu and the Ebola virus
