

Low-cost sewerage

—Duncan Mara¹

Research and development undertaken by the World Bank during 1976–1986 (1, 2, 3) has shown clearly that possession, proper use and maintenance of a sanitation facility are more important, in terms of improving health, than the actual sanitation technology employed, provided that it is affordable and socioculturally acceptable. Nevertheless, sanitation technology choices have to be made, and the principal choice is between on-site and off-site systems, as follows:

- On-site technologies:**
 - VIP latrines (or other types of pit latrine)
 - pour-flush toilets
 - septic tanks
- Off-site technologies:**
 - conventional sewerage
 - low-cost (unconventional) sewerage
 - settled sewerage
 - simplified sewerage

These technologies are described in the literature (see, for example, Mara (4, 5), Mara and Sinnatamby (6), Otis and Mara (7), Sinnatamby (8), Bakalian et al. (9) and, more generally, Mara (10)). The two low-cost sewerage technologies are less well known. Yet, in low-income areas with an adequate water supply these are viable sanitation options—often, depending on housing density, they are the only feasible options. This article reviews these low-cost sewerage options, their potential and their limitations. It also provides guidance on how to choose the most appropriate option, and gives examples of their successful application (see also (16)).

Nomenclature of low-cost sewerage

Both settled sewerage and simplified sewerage use small-diameter sewers laid at shallow depths and in which the flow is, ideally, due to gravity. Other terms, such as small-bore sewerage, small-diameter gravity sewerage or shallow sewerage are unclear. The definitions used in this article follow the Portuguese terminology developed in Brazil (see (11)) and are outlined below.

Settled sewerage: a system in which wastewater from one or more households is discharged into a single-compartment septic tank (usually called a solids interceptor tank). The settled (or solids-free) effluent from the septic tank is then discharged into shallow, small-bore gravity sewers. Settled sewerage is thus the same as small-bore sewerage as described by Otis and Mara (7), small-diameter gravity sewerage (12) and common effluent drainage (13). (In Portuguese it is called *redes de esgotos decantados*; in French, *réseaux d'eaux usées décantées*; and in Spanish (17), *alcantarillado sin arrastre de sólidos*.)

Simplified sewerage describes shallow sewerage as used by Sinnatamby (8) and its in-block variant called backyard or condominium sewerage (15). This system does not

Low Cost Sewerage:

Low-Cost Sewerage Duncan Mara,1996-10-07 Low cost sewerage provides practical solutions to the sanitation needs of low income areas As a result of the currently very rapid urban population growth the demand for sewerage exceeds the resources of most high density urban areas in developing countries Low cost alternatives to conventional sewerage such as settled sewerage and simplified sewerage therefore need to be developed This book is the result of contributions by both academics and practitioners who attended the International Conference on Low cost Sewerage which was held at the University of Leeds England in July 1995 Low cost sewerage technologies are described and their applications in both developed and developing countries are detailed

Low Cost Urban Sanitation Duncan Mara,1996-12-23 This book covers the public health technical socioeconomic sociocultural and institutional aspects of sanitation in towns and cities of developing countries The text features excreta related diseases and the use of sanitation to reduce their transmission The sanitation technologies covered in detail are VIP latrines pour flush toilets septic tanks settled sewerage and simplified sewerage with additional chapters on sullage disposal pit emptying and sewage treatment and reuse Sociocultural constraints on sanitation systems and their socioeconomic costing are described together with hygiene education which is essential in order to achieve maximum benefits to health The text also explains how to choose the most appropriate sanitation option for a given low income community Finally institutional aspects are reviewed including effective sanitation programme planning monitoring and evaluation
