Christian Streffer, H. Bolt, D. Follesdal, P. Hall, J.G. Hengstler, P. Jacob, D Oughton, K. Prieß, E. Rehbinder, E. Swaton, 2004-05-03 The ever increasing release of harmful agents due to human activities have led in some areas of the world to heavy pollution In order to protect human health and the environment environmental standards that shall limit the release and the concentration of those toxic agents in the environment and hence the exposure to it have to be established The related assessment and decision making procedures have to be based on solid scientific data about the effects and mechanisms of these agents as well as on ethical social and economic aspects For risk evaluation the knowledge of the dose response curve is an essential prerequisite Dose responses without a threshold dose are most critical in this connection Such dose responses are assumed for mutagenic and carcinogenic effects which therefore dominate also the discussion in this book In the environmentally important low dose range risk estimation can only be achieved by extrapolation from higher doses with measurable effects The extrapolation is accompanied with uncertainties which makes risk evaluation as well as risk communication frequently problematic In order to ensure rational efficient and fair decisions beyond a sound scientific assessment the dialogue between disciplines with the affected people and with the general public is necessary In this book

the whole range of relevant and essential aspects of risk evaluation and standard setting is addressed Starting with the ethical foundations the sound analysis of recent scientific findings sets the frame for further reflections by theory of cognition psychosocial sciences and jurisprudence The authors end up with concluding recommendations for coping with the recent problems of standard setting in the field of environmentally relevant low doses The book is designed to a readership of scientists legislators administrators and the interested public

Radiobiology and Environmental Security Carmel E Mothersill, Victoria Korogodina, Colin B. Seymour, 2011-10-17 This volume like the NATO Advanced Research Workshop on which it is based addresses the fundamental science that contributes to our understanding of the potential risks from ecological terrorism i.e. dirty bombs atomic explosions intentional release of radionuclides into water or air Both effects on human health DNA and systemic effects and on ecosystems are detailed with particular focus on environmentally relevant low dose ranges The state of the art contributions to the book are authored by leading experts they tackle the relevant questions from the perspectives of radiation genetics radiobiology radioecology radiation epidemiology and risk assessment

Mechanisms of Environmental Mutagenesis-Carcinogenesis A. Kappas, 2012-12-06 The 19th annual meeting of the European Environmental Mutagen Society was held in Rhodes Greece from October 21st to 26th 1989 The programme was chosen to explore what is currently known about the mechanisms of mutagenesis and carcinogenesis induced by environmental agents and the questions regarding the relationship of these two processes Recent findings techniques and methodologies in the area of biomonitoring of humans exposed to environmental mutagens carcinogens were presented and considerable attention was also paid to the aspects and issues of collaborative environmental policy Researchers from all over the world contributed to the programme of the meeting with posters and oral presentations providing a variety of new data and interesting scientific approaches A number of outstanding scientists were invited to present the results of their work It is only their presentations which are included in this book covering the following topics Mutations and carcinogenesis mechanisms of chemically induced genetic effects on molecular chromosomal and cell division level adaptability and repair mechanisms chemical carcinogenesis and oncogenes structure and metabolism of mutagens carcinogens biomonitoring and epidemiology of humans exposed to environmental mutagens carcinogens For the sake of evaluating and controlling the mutagenic and carcinogenic potential of our environment it is indispensable to understand the mechanisms and processes by which chemicals act on the genetic material causing either hereditary disease or cancer The publication of these proceedings will hopefully contribute to this task

Environmental Radiobiology Paul N. Schofield, Carmel E. Mothersill, 2023-10-17 This book focuses on the impacts of anthropogenic radiation on wildlife and ecosystems and provides an in depth look at the approaches and available tools we can use to gain information about biological effects of radiation in the environment The nuclear accidents in Chernobyl in 1986 and Fukushima in 2011 focussed the attention of the world on the vulnerability of ecosystems to radiation In Chernobyl there still remains an exclusion zone where levels are considered to be too high for people and impacts on terrestrial and aquatic ecosystems can still be measured 35 years later In the area impacted by the Fukushima disaster intense remediation is still under way at tremendous cost and causing widespread disruption to the environment That accident impacted the terrestrial and marine ecosystems In both accidents it became obvious that a radiation protection framework focussing on protection of humans a single species and using evacuation as a key strategy was not sufficient to protect the natural environment The complexity of ecosystems makes developing a protection framework very challenging but in order to even start the process it is vital to gather information about likely impacts of low dose exposures on wildlife and to develop monitoring tools to measure changes over time This book contains reviews and original research aimed at filling our knowledge gaps about these important areas Environmental Radiobiology will be a key resource for academics researchers and advanced students of Radiobiology Radioecology Biology Ecology Biomedicine and Research Methods The chapters included in this book were originally published as a special issue of International Journal of Radiation Biology *Reviews of Environmental Contamination and Toxicology Volume 258* Pim de Voegt, 2021-11-17 Reviews of Environmental Contamination and Toxicology attempts to provide concise critical reviews of timely advances philosophy and significant areas of accomplished or needed endeavor in the total field of xenobiotics in any segment of the environment as well as toxicological implications **Environmental Effects on Cognitive Abilities** Robert J. Sternberg, Elena L.

Grigorenko,2014-04-08 It sometimes seems that it is difficult to pick up a current newspaper or a magazine without it containing a story about some behavioral characteristic for which it has been found that a gene is responsible Even aspects of behavior that one would feel certain are environmentally controlled are now being attributed in part to the effects of the genes But genes never act alone Their effects are always filtered through the environment The goal of this volume is to discuss how the environment influences the development and the maintenance of cognitive abilities It is a successor to the editors 1997 volume Intelligence Heredity and Environment and a companion to their new volume Family Environment and Intellectual Functioning A Life Span Perspective Taken together the two volume set comprises the most comprehensive existing work on the relation between the environment and cognitive abilities Psychologists parents social workers educators and employers are all likely to find this book of interest *The Overestimation of Medical Consequences of Low-Dose Exposure to Ionizing Radiation, 2nd Edition* Sergei V. Jargin,2023-10-16 This book analyzes bias and conflicts of interest in numerous papers exaggerating the medical and biological consequences of low dose radiation After the Chernobyl accident many publications overestimated its medical consequences Among the motives for doing so were financing international help publication pressure and the pressure to write numerous theses and articles throughout one s scientific career The accident has been exploited to strangle nuclear energy thus boosting fossil fuel prices Nuclear facilities are potential targets in armed conflicts One of the motives to unleash the war in Ukraine and threats to use nuclear weapons seems to be boosting fossil fuel prices In more developed countries antinuclear resentments have been supported by Green activists well in agreement with the interests of fossil fuel vendors several companies and certain governments Today there are no alternatives to nuclear energy This book argues that in the long run non renewable fossil fuels will become more expensive contributing to excessive population growth in oil producing regions and poverty elsewhere Federal Register ,1998-02 *Reviews in Environmental Health (1998)* Gary E.
