dimension of health inequalities but its trends and determinants in Germany are widely unknown This book examines and illustrates patterns of regional mortality in Germany with focus on small area differentials and their changes over time It identifies explanatory factors at individual and regional level Mortality differences between eastern and western Germany exist but small area mortality differentials are often greater Though the main spatial mortality patterns remain this study provides evidence that some distinct changes in the small area mortality patterns in Germany especially among women occurred within a short period of time Mortality inequalities at younger ages and in behavior related causes as well as differences in socioeconomic conditions contribute strongly to regional mortality differences in Germany The book shows that the complex interplay between individual and regional level mortality risk factors requires a multidimensional approach to reduce regional mortality inequalities

Behavioral Epidemiology and Disease Prevention Robert M. Kaplan, Michael H. Criqui, 2012-12-06 In the United States and in Europe there has been an increasing interest in the relationship between individual behavior and disease The American National Academy of Sciences Hamberg Elliott and Parron 1982 through its Institutes of Medicine has estimated that as many as 50 percent of chronic disease cases can be traced to individual behaviors such as smoking diet exercise etc Similar conclusions have been reached by a variety of European investigators and institutes The World Health Organization has also expressed considerable interest in individual behavior in relation to the development of chronic disease Thus throughout the NATO countries there has been increased

awareness of the relationship between behavior and disease However communication among investigators in different countries has been rather limited Further many different scientific disciplines including psychology sociology medicine microbiology statistics and epidemiology have all developed new and different literatures in this field One purpose of this book is to bring together contributions from scientists in each of these fields Much of the variance in individual health behavior occurs across countries rather than within countries Thus we can learn much from comparing behavior disease relationships across countries To date there have been few studies which have had an adequate international basis for these comparisons Interest in behavioral epidemiology is a relatively recent phenomena Thus many scientists are entering the field without uniform background experience or training This book discusses approaches common in a variety of NATO countries
