Lubricants from Renewable Feedstocks Subhalaxmi Pradhan, Lalit Prasad, Chandu Madankar, S. N. Naik, 2024-07-02. Written and edited by a team of industry experts, this exciting new volume covers the field of renewable lubricants: their processing, optimization, end use application, and their future potential. Biolubricants are a viable alternative to synthetic lubricants because they are produced from organic materials such as plant oils, waste oils, and by-products. Renewable biolubricants are the subject of research because of their biodegradability, eco-friendliness, and favorable socioeconomic consequences to counteract imitations of synthetic lubricants. Biolubricants have thus emerged as an ideal substitute for mineral oil-based lubricants as significant economic and environmental acceptability has been received over the last few decades, and it has been estimated that there would be a further steady growth in its demand over the next few decades. Furthermore, biolubricants' high quality lubricating properties, high load-carrying ability, long service life, and fast biodegradability have expanded the recent interest. These lubricants can be derived from different sources of vegetable oils, non-edible oils, waste cooking oils, WCO, and microbe-derived oils. Among all these sources, the use of WCOs and microbe-derived oils has received immense interest and provides superior quality biolubricants. This outstanding new volume covers the prospects and processing of feedstocks for biolubricants, extraction techniques, new advancements in the field of bio-based lubricants, epoxide lubricants, hydrogenated lubricants, microbial-based biolubricants, nano biolubricants, polyester-based biolubricants, lubricants from waste oils and waste materials, its economic and environmental acceptability, and biorefinery approaches. The book will be helpful to industry professionals and engineers of all types, students, and other stakeholders working in the field of lubricant, chemical engineering, mechanical engineering, and material science, tribological sectors, and biorefinery industries. It will also be of great interest to new start-up companies working in the area of processing feedstocks for biolubricant production and end use application, biorefineries, valorization of biolubricant waste, and in the recycling industries.

Environmentally Friendly and Biobased Lubricants Brajendra K. Sharma, Girma Biresaw, 2016-09-19. A Comprehensive Review of Developing Environmentally Friendly Lubricants. A push from environmentally savvy consumers along with recent changes in governmental regulations have paved the way for a marketplace of products with high levels of environmental performance. Fueled by the growing demand for biobased lubricants, *Environmentally Friendly and Biobased Lubricants* highlights the development of environmentally friendly additives that are compatible with environmental regulations and describes the approaches being used in this emerging area. Derived from research topics shared over the years at various technical sessions of the Society of Tribologists and Lubrication Engineers (STLE) Annual Meetings, the book includes a critical assessment of gaps and weaknesses in the field of environmentally friendly fluids and biobased lubricants. Each chapter is written by authors selected from the environmentally

friendly fluids and biobased lubricants sessions of STLE and also incorporates input from prominent researchers invited to take part in the book. Expert contributors discuss the control production usage and disposal of lubricants factor in related policies, laws and regulations around the world and include case studies demonstrating the uses and values of commercially viable biobased lubricants. The book is divided into five sections that cover advanced environmentally friendly base oils and feedstocks, biobased hydraulic lubricants and biodegradability, chemically/enzymatically modified environmentally friendly base oils, vegetable oil based environmentally friendly fluids and additives for environmentally friendly fluids.
