New Profession Old Order Engineers And German Society 1815 1914:

New Profession, Old Order Kees Gispén, 2002-07-25 New Profession Old Order explores the creative tension between modern technology and preindustrial Germany. It offers an explanation of why the engineering profession is so successful in transforming the physical world did not achieve the professional power cohesion and prestige that its technological accomplishments would seem to have warranted.

Steps toward a Philosophy of Engineering Carl Mitcham, 2019-12-06 The rise of classic Euro American philosophy of technology in the 1950s originally emphasized the importance of technologies as material entities and their mediating influence within human experience. Recent decades however have witnessed a subtle shift toward reflection on the activity from which these distinctly modern artifacts emerge and through which they are engaged and managed that is on engineering. What is engineering? What is the meaning of engineering? How is engineering related to other aspects of human existence? Such basic questions readily engage all major branches of philosophy: ontology, epistemology, ethics, political philosophy, and aesthetics, although not always to the same degree. The historico-philosophical and critical reflections collected here record a series of halting steps to think through engineering and the engineered way of life that we all increasingly live in what has been called the Anthropocene. The aim is not to promote an ideology for engineering but to stimulate deeper reflection among engineers and non-engineers alike about some basic challenges of our engineered and engineering lifeworld.

The Enigma of the Aerofoil David Bloor, 2011-10-03 Why do aircraft fly? How do their wings support them? In the early years of aviation there was an intense dispute between British and German experts over the question of why and how an aircraft wing provides lift. The British, under the leadership of the great Cambridge mathematical physicist Lord Rayleigh, produced highly elaborate investigations of the nature of discontinuous flow, while the Germans, following Ludwig Prandtl in Göttingen, relied on the tradition called technical mechanics to explain the flow of air around a wing. Much of the basis of modern aerodynamics emerged from this remarkable episode, yet it has never been subject to a detailed historical and sociological analysis. In *The Enigma of the Aerofoil* David Bloor probes a neglected aspect of this important period in the history of aviation. Bloor draws upon papers by the participants, their restricted technical reports, meeting minutes, and personal correspondence, much of which has never before been published, and reveals the impact that the divergent mathematical traditions of Cambridge and Göttingen had on this great debate. Bloor also addresses why the British, even after discovering the failings of their own theory, remained resistant to the German circulation theory for more than a decade. The result is essential reading for anyone studying the history, philosophy, or sociology of science or technology, and for all those intrigued by flight.

God and Gadgets Brad J. Kallenberg, 2011-01-01 Technologies are deeply embedded in the modern West. What would our lives be like without asphalt, glass, gasoline, electricity, window screens, or indoor plumbing? We naturally praise technology when it is useful and bemoan it when it is not. But there is much more to technology than the usefulness of this or that artifact. Unfortunately, we tend not to consider the inherently

social and moral character of technology As a result we are prone to overlook the effects of technology on our spiritual lives This book investigates the role technology plays in helping and hampering our Christian practice and witness **Shifting**

Lines, Entangled Borderlands Jan Musekamp, 2024-03-05 Tracing multiple mobilities entangled borderlands microhistory and space and human and nonhuman actors Jan Musekamp demonstrates how an inner Prussian railroad line turned into a transnational force overcoming borders and connecting Europeans in a time of rising nationalism **Shifting Lines Entangled Borderlands** investigates the dichotomy between a globalizing world and tighter border control in nineteenth century Central and Eastern Europe focusing on the Royal Prussian Eastern Railroad Ostbahn between the 1830s and 1930s The line was initially planned as a major internal modernizing project to connect Prussia's capital of Berlin to East Prussia's provincial capital of Königsberg today's Kaliningrad Soon the Ostbahn connected to the growing Imperial Russian railroad network thus becoming a backbone of European East West transportation in trade tourism technological exchange and migration The First World War temporarily disrupted and reconfigured existing networks adapting them to new political regimes and borders However World War II and its aftermath altered mobility patterns more permanently dividing not only the Ostbahn tracks but the whole continent for decades to come From border towns and major cities to unique structures such as stations or bridges this volume analyzes the obvious and not so obvious nodes of the Central and Eastern European rail network and the spaces in between **Desert Edens** Philipp Lehmann, 2024-12-17 How technological advances and colonial fears inspired utopian

Geiger, Nathan M. Sorber, 2013-03-01 This work provides a critical reexamination of the origin and development of America's land grant colleges and universities created by the most important piece of legislation in higher education The story is divided into five parts that provide closer examinations of representative developments Part I describes the connection between agricultural research and American colleges Part II shows that the responsibility of defining and implementing the land grant act fell to the states which produced a variety of institutions in the nineteenth century Part III details the first phase of the conflict during the latter decades of the nineteenth century about whether land colleges were intended to be agricultural colleges or full academic institutions Part IV focuses on the fact that full fledged universities became dominant institutions of American higher education The final part shows that the land grant mission is alive and well in university colleges of agriculture and in fact is inherent to their identity Including some of the best minds the field has to offer this volume follows in the fine tradition of past books in Transaction's Perspectives on the History of Higher Education series *Poems in Steel* Kees Gispén, 2002 The role of National Socialism in the development of German society remains a central question of historical inquiry This study presents original answers by examining the politics of

inventing a crucial but long ignored problem at the intersection of the history of technology legal political and business history The analysis of conflicts over the rights of inventors and the meaning of inventing from the 1920s to the 1950s reveals a deep chasm reaching back to the late nineteenth century between the forces of capital and big business on one hand and the exponents of intellectual capital inventors engineers industrial scientists on the other The Intellectual Appropriation of Technology Mikael Hard, Andrew Jamison, 1998-10-27 This book examines the broad range of social and intellectual responses to technology in the first four decades of this century and suggests that these responses set the terms that continue to govern contemporary debates Starting around 1900 technology became a lively subject for debate among intellectuals writers and other opinion leaders The expansion of the machine into ever more areas of social and economic life had led to a need to interpret its meanings in a more comprehensive way than in the past World War I and its aftermath shifted the terms of this ongoing debate by underlining both the potential dangers of technology and its centrality to modern life This book examines the broad range of social and intellectual responses to technology in the first four decades of this century and suggests that these responses set the terms that continue to govern contemporary debates Focusing on the broader contexts within which intellectual positions are formed the book highlights the ways in which attitudes toward technology were shaped in a wide variety of national and organizational settings A common theme is that in debating technology people drew on their distinctive national symbols and cultural traditions By emphasizing the interplay between debates on technology and the making of modernity the book challenges standard historical accounts of the early twentieth century Contributors Ketil G Andersen Aant Elzinga Tor Halvorsen Mikael H rd Kjetil Jakobsen Andrew Jamison Catharina Landstr m Conny Mithander Sissel Myklebust Dick van Lente Peter Wagner *Railroads and the Transformation of China* Elisabeth Köll, 2019-01-14 As a vehicle to convey both the history of modern China and the complex forces still driving the nation s economic success rail has no equal Railroads and the Transformation of China is the first comprehensive history in any language of railroad operation from the last decades of the Qing Empire to the present China s first fractured lines were built under semicolonial conditions by competing foreign investors The national system that began taking shape in the 1910s suffered all the ills of the country at large warlordism and Japanese invasion Chinese partisan sabotage the Great Leap Forward when lines suffered in the battle for steel and the Cultural Revolution during which Red Guards were granted free passage to make revolution across the country nearly collapsing the system Elisabeth Köll s expansive study shows how railroads survived the rupture of the 1949 Communist revolution and became an enduring model of Chinese infrastructure expansion The railroads persisted because they were exemplary bureaucratic institutions Through detailed archival research and interviews Köll builds case studies illuminating the strength of rail administration Pragmatic management combining central authority and local autonomy sustained rail organizations amid shifting political and economic priorities As Köll shows rail provided a blueprint for the past forty years of ambitious semipublic business development and remains an essential

component of the PRC's politically charged technocratic economic model for China's future *Crossing Boundaries, Building Bridges* Annie Canel, Ruth Oldenziel, 2005-08-08 Women engineers have been in the public limelight for decades yet we have surprisingly little historically grounded understanding of women in this field This book considers the mechanisms of exclusion and inclusion of them **Supervision and Authority in Industry** Patricia vanden Eeckhout, 2009 The number of studies discussing the labour relationship under industrial capitalism is overwhelming but the literature on labour and its concrete day today shop floor practices is much less abundant How and by whom workers were supervised is one of the neglected aspects in the history of labour relations After an insightful introductory chapter discussing the different forms of supervision in the United States Britain France and Germany before the First World War the case studies in this volume focus on foremen vital but largely unstudied figures in the history of factory life labour relations and management Illustrating the multiple faces of the foreman the contributors examine the artisanal sector textiles mining printing engineering heavy manufacturing and car industries in Western Europe and show that the foreman was a multifaceted character who possessed technical expertise in addition to educational and organizational qualities This comprehensive volume is further enhanced by comparisons with practices of supervision in Russia Japan China and India Networks of Modernity Jean-Michel Johnston, 2021 *Networks of Modernity* Germany in the Age of the Telegraph 1830-1880 investigates the origins and impact of the communications revolution in nineteenth century Germany focusing on one of the most transformative technologies of the period the electric telegraph *Intellectual Property Rights and the Life Science Industries* Graham Dutfield, 2009 This book is a highly readable and entertaining account of the co evolution of the patent system and the life science industries since the mid 19th century The pharmaceutical industries have their origins in advances in synthetic chemistry and in natural products research Both approaches to drug discovery and business have shaped patent law as have the lobbying activities of the firms involved and their supporters in the legal profession In turn patent law has impacted on the life science industries Compared to the first edition which told this story for the first time the present edition focuses more on specific businesses products and technologies including Bayer Pfizer GlaxoSmithKline aspirin penicillin monoclonal antibodies and polymerase chain reaction Another difference is that this second edition also looks into the future addressing new areas such as systems biology stem cell research and synthetic biology which promises to enable scientists to OC inventOCO life forms from scratch

Toys, Consumption, and Middle-class Childhood in Imperial Germany, 1871-1918 Bryan Ganaway, 2009 Drawing on a variety of techniques from history anthropology and literary criticism the author argues toy consumption helped adults negotiate the transmission of middle class values regarding modernity technology gender roles and nationalism to their children Practices of consumption permitted self fashioning from above and below women used their control over childhood to insert themselves into political debates about the future shape of the nation at a time when they lacked the vote Although the project to build a middle class utopia via shopping never succeeded millions of Germans happily bought toys at Christmas

and birthdays showing their faith in the ability of modern society to make the world a better place To understand why ordinary consumers made these choices the book draws on a variety of sources including periodicals trade journals advertisements pedagogical literature memoirs and toys

- 2 How has organization theory developed over time and what structure has the field taken What assumptions does knowledge produced in organization theory incorporate and what forms do its knowledge claims take as they are put forward for public adoption
- 3 How have certain well known controversies in organization theory such as for example the structure agency dilemma the study of organizational culture the different modes of explanation the micro macro controversy and the different explanations produced by organizational economists and sociologists been dealt with
- 4 How and in what ways is knowledge generated in organization theory related to action What features must organization theory knowledge have in order to be actionable and of relevance to the world out there How have ethical concerns been taken into account in organization theory
- 5 What is the future of organization theory What direction should the field take What must change in the way research is conducted and key theoretical terms are conceptualized so that organization theory enhances its capacity to generate valid and relevant knowledge

Manufacturing Rationality Yehouda A. Shenhav, 2002

Through careful analysis of contemporary records in the engineering profession the author shows how management invented itself and carved its own domain in the face of hostility and resistance from both manufacturers and workers The book demonstrates how the new language and rhetoric of management emerged and how it confronted and replaced the language of traditional capitalism system instead of individuals jobs instead of natural rights planning instead of free initiatives

Zionist Architecture and Town Planning Nathan Harpaz, 2013-11-15

Established as a Jewish settlement in 1909 and dedicated a year later Tel Aviv has grown over the last century to become Israel's financial center and the country's second largest city This book examines a major period in the city's establishment when Jewish architects moved from Europe including Alexander Levy of Berlin and attempted to establish a new style of Zionist urbanism in the years after World War I The author explores the interplay of an ambitious architectural program and the pragmatic needs that drove its chaotic implementation during a period of dramatic population growth He explores the intense debate among the Zionist leaders in Berlin in regard to future Jewish settlement in the land of Israel after World War I and the difficulty in imposing a town plan and architectural style based on European concepts in an environment where they clashed with desires for Jewish revival and self identity While modern values advocated universality Zionist ideas struggled with the conflict between the concept of New Order and traditional and historical motifs As well as being the first detailed study of the formative period in Tel Aviv's development this book presents a valuable case study in nation building and the history of Zionism Meticulously researched it is also illustrated with hundreds of plans and photographs that show how much of the fabric of early twentieth century Tel Aviv persists in the modern city

The Rise of Engineering Science David F. Channell, 2018-07-10

The 18th and 19th

centuries saw the emergence of new intermediary types of knowledge in areas such as applied mechanics fluid mechanics and thermodynamics which came to be labeled as engineering science transforming technology into the scientific discipline that we know today This book analyzes how the Scientific Revolution of the 16th and 17th centuries and the Industrial Revolution of the 18th and 19th centuries provided the intellectual social economic and institutional foundations for the emergence of engineering science The book then traces the rise of engineering science from the 18th century through the 19th century and concludes by showing how it led to new technological developments in such areas as steel production the invention of internal combustion engines the creation of automobiles and airplanes and the formulation of Mass Production and Scientific Management all of which brought about major transformations in the materials power sources transportation and production techniques that have come to shape our modern world
