**New Trends in Fluorescence Spectroscopy**, 2001      New Trends in Fluorescence Spectroscopy Bernard

Valeur, Jean-Claude Brochon, 2012-12-06 Fluorescence is more and more widely used as a tool of investigation analysis control and diagnosis in many fields relevant to physical chemical biological and medical sciences New technologies continuously emerge thanks to the progress in the design of light sources e.g. laser diodes detectors 3D 4D and compact ultrafast electronic devices In particular much progress has been made in time resolved fluorescence microscopy FRET Fluorescence Lifetime Imaging Microscopy FCS Fluorescence Correlation Spectroscopy Furthermore the sensitivity now allows one to detect a single molecule in the restricted field of a confocal microscope which actually offers the possibility to study phenomena at a molecular level The development of new fluorescent probes is still a necessity In particular the growing use of lasers implies high resistance to photo degradation Fluorescence emission at long wavelengths is also a distinct advantage Furthermore in vivo inclusion of new fluorescent aromatic residues in proteins offer new potentialities in biology of ions and molecules is Fluorescence based selective detection still the object of special attention Considerable effort is being made in the design of supramolecular systems in which the recognition event is converted into a fluorescence signal easily detected New fluorescent sensors for clinical diagnosis and detection of pollutants in atmosphere and water are extensively developed All these developments justify the regular publication of books giving the state of the art of the methods and applications of fluorescence spectroscopy      *Springer series on fluorescence*, 2001      Molecular Fluorescence Bernard Valeur, Mário

Nuno Berberan-Santos, 2013-03-27 Molecular Fluorescence This second edition of the well established bestseller is completely updated and revised with approximately 30 % additional material including two new chapters on applications which has seen the most significant developments The comprehensive overview written at an introductory level covers fundamental aspects principles of instrumentation and practical applications while providing many valuable tips For photochemists and photophysicists physical chemists molecular physicists biophysicists biochemists and biologists lecturers and students of chemistry physics and biology      **Fluorescence Spectroscopy, Imaging and Probes** Ruud

Kraayenhof, Antonie J.W.G. Visser, Hans C. Gerritsen, 2012-12-06 The application of fluorescence in drug discovery high throughput screenings in genomics and proteomics is and will be evidently successful The increased use of fluorescence techniques is greatly enhanced by the improved instrumentation pioneered by inventive scientists and now made available commercially by several high tech companies Moreover the design and development of many new molecular probes with higher selectivity for specific microenvironmental properties has stimulated many new researchers to employ fluorescence techniques for solving their problems Probably the most significant breakthrough in fluorescence is its use in detection of single molecules and even of their real time dynamics Also probing inside living cells has become a hot topic in the life sciences This topic book reflects the updates of scientific progress presented by frontline researchers      Springer Handbook

of Inorganic Photochemistry Detlef Bahnemann, Antonio Otavio T.
