*New Strategies in Locust Control* S. Krall,R. Peveling,B.D. Diallo,2012-12-06 In the late eighties large scale control operations were carried out to control a major desert locust upsurge in Africa For the first time since the banning of organochlorine pesticides these operations relied mainly on non persistent pesticides such as organophosphates and pyrethroids The amount of pesticides sprayed and the area covered were probably the highest in the history of locust control and raised criticism with respect to efficacy economic viability and environmental impact As a consequence applied research into the problem was intensified both at the national and the international level with the goal of finding new and environmentally sound approaches and solutions to locust and grasshopper control Emphasis was laid on developing new control agents and techniques

**Integrated Management of Arthropod Pests and Insect Borne Diseases** Aurelio Ciancio,K.G. Mukerji,2010-06-16 This is the last volume of the IPMD series It aims in a multi disciplinary approach at reviewing and discussing recent advances and achievements in the practice of crop protection and integrated pest and disease management This last effort deals with management of arthropods and is organized with a first section on biological control in citrus orchards a second one on advanced and integrated technologies for insect pest management and a last section dealing with mites and their biological control A wide and exhaustive literature already covers several aspects of chemical or biological control of insects and mites but there is still a need for a more holistic vision of management accounting for different problems and solutions as they are applied or developed in different regions and cropping systems worldwide In this series we attempted to fill this gap providing an informative coverage for a broad range of agricultural systems and situations

**Area-Wide Control of Insect Pests** M.J.B. Vreysen,A.S. Robinson,J. Hendrichs,2007-10-30 Insect pests are becoming a problem of ever more biblical proportions This new textbook collates a series of selected papers

that attempt to address various fundamental components of area wide insect pest control Of special interest are the numerous papers on pilot and operational programs that pay special attention to practical problems encountered during program implementation It s a compilation of more than 60 papers authored by experts from more than 30 countries

**Biology, Ecology and Systematics of Australian Scelio** Paul Dangerfield, Andrew Austin, Graeme Baker, 2001-12-01 Parasitic wasps of the genus *Scelio* play an important role in the regulation of orthopteran populations and are implicated in suppressing numbers of numerous pest locusts and grasshoppers This landmark volume provides a full taxonomic treatment of the sixty species of *Scelio* found on the Australian continent and reviews in detail the biology and ecology and host relationships of *Scelio* on a worldwide basis Taking an international perspective the text outlines our current knowledge on topics such as host finding population biology and methods and techniques for collection and study in the field The use of *Scelio* as biological control agents is discussed and comprehensive checklists document the recorded host relationships of each known species worldwide There is a full taxonomic revision of all Australian species of *Scelio* half of which are newly described Each species description is complemented with high quality line drawings micrographs and distribution maps In addition an illustrated key to species enables easy identification of species by non taxonomists **Biology Ecology and Systematics of Australian Scelio** provides wasp taxonomists researchers of orthoptera and biological control workers with a basis for detailed studies elsewhere on this economically important group of insects

**Biological Control in IPM Systems in Africa** P. Neuenschwander, C. Borgemeister, J. Langewald, 2003 Annotation Biological control has made a major contribution to integrated pest management IPM in Africa but its documentation has been scattered and often under reported This book provides a review of the most important studies including not only successes but also on going challenges The focus is on arthropod pests and weeds but diseases are also covered where significant In 24 chapters case studies and promising research results are presented that cover biocontrol by naturally occurring agents by exotic agents or by seasonal manipulation This book provides a valuable resource for scientists worldwide It is particularly useful for pest control professionals working in Africa

**New Strategies for Locust Control** H. Rembold, 1994 *Pesticidal Plants* Philip C. Stevenson, Steven R. Belmain, Murray B. Isman, 2020-05-27 The global biodiversity and climate emergencies demand transformative changes to human activities For example food production relies on synthetic industrial and non sustainable products for managing pests weeds and diseases of crops Sustainable farming requires approaches to managing these agricultural constraints that are more environmentally benign and work with rather than against nature Increasing pressure on synthetic products has reinvigorated efforts to identify alternative pest management options including plant based solutions that are environmentally benign and can be tailored to different farmers needs from commercial to small holder and subsistence farming Botanical insecticides and pesticidal plants can offer a novel effective and more sustainable alternative to synthetic products for controlling pests diseases and weeds This Special Issue reviews and reports the latest developments

in plant based pesticides from identification of bioactive plant chemicals mechanisms of activity and validation of their use in horticulture and disease vector control Other work reports applications in rice weeds combination biopesticides and how chemistry varies spatially and influences the effectiveness of botanicals in different locations Three reviews assess wider questions around the potential of plant based pest management to address the global challenges of new invasive and established crop pests and as yet underexploited pesticidal plants
