Joseph Roisman, 2012-08-24 From antiquity until now most writers who have chronicled the events following the death of Alexander the Great have viewed this history through the careers ambitions and perspectives of Alexander's elite successors Few historians have probed the experiences and attitudes of the ordinary soldiers who followed Alexander on his campaigns and who were divided among his successors as they fought for control of his empire after his death Yet the veterans played an important role in helping to shape the character and contours of the Hellenistic world This pathfinding book offers the first in depth investigation of the Macedonian veterans experience during a crucial turning point in Greek history 323-316 BCE Joseph Roisman discusses the military social and political circumstances that shaped the history of Alexander's veterans giving special attention to issues such as the soldiers conduct on and off the battlefield the army assemblies the volatile relationship between the troops and their generals and other related themes all from the perspective of the rank and file Roisman also reexamines the biases of the ancient sources and how they affected ancient and modern depictions of Alexander's veterans as well as Alexander's conflicts with his army the veterans motives and goals and their political contributions to Hellenistic history He pays special attention to the Silver Shields a group of Macedonian veterans famous for their invincibility and martial prowess and assesses whether or not they deserved their formidable reputation

Islamic Astronomical Tables Benno van Dalen, 2023-05-31 This volume comprises nine articles on Islamic astronomy published since 1989 by Benno van Dalen Van Dalen was the first historian of Islamic astronomy who made full use of the new possibilities of computers in the early 1990s He implemented various statistical and numerical methods that can be used to determine the mathematical properties of medieval astronomical tables and utilized these to obtain entirely new until then unattainable historical results concerning the interdependence of individual tables and hence of entire astronomical works His programmes for analysing tables making sexagesimal calculations and converting calendar dates continue to be widely used The five articles in the first part of this collection explain the principles of a range of statistical methods for determining unknown parameter values underlying astronomical tables and present extensive step by step examples for their use The four articles in the second part provide extensive studies of materials in unpublished primary sources on Islamic astronomy that heavily depend on these methods The volume is completed with a detailed index
