Theory of Finite Element Methods Susanne Brenner, L. Ridgway Scott, 2013-03-14 Mathematics is playing an ever more important role in the physical and biological sciences provoking a blurring of boundaries between scientific disciplines and a resurgence of interest in the modern as well as the classical techniques of applied mathematics This renewal of interest both in research and teaching has led to the establishment of the series Texts in Applied Mathematics TAM The development of new courses is a natural consequence of a high level of excitement on the research frontier as newer techniques such as numerical and symbolic computer systems dynamical systems and chaos mix with and reinforce the traditional methods of applied mathematics Thus the purpose of this textbook series is to meet the current and future needs of these advances and to encourage the teaching of new courses TAM will publish textbooks suitable for use in advanced undergraduate and beginning graduate courses and will complement the Applied Mathematical Sciences AMS series which will focus on advanced textbooks and research level monographs

Numerical Analysis II Ralph E. Morganstern, 2014-11-03 These Lecture Slide Notes have been used over the past several years for a two quarter graduate level sequence in numerical analysis Part 1 covers introductory material on the Nature of Numerical Analysis Root Finding Techniques Polynomial Interpolation Derivatives and Integrals Part 2 covers Ordinary Differential Equations and Numerical solutions to Linear Systems of Equations Each slide stands alone to encapsulate a complete concept algorithm or theorem using a combination of equations graphs diagrams illustrative tableaux and comparison tables The explanatory notes are placed directly below each slide in order to reinforce and give additional insight into the particular numerical technique or concept illustrated in the slide Students have found this Lecture Slide Note format to be extremely useful in reviewing the concepts in preparation for an exam This format is convenient for self study it covers the subject matter in a concise and easily accessible form using many visualizations The Table of Contents serves to organize the slides in terms of the main numerical analysis topics covered and gives a complete list of slide Titles and their page numbers A selection of Illustrative MatLab scripts is given in Appendix A Finally references to a number of standard text books are given but there has been no attempt to make an exhaustive bibliography
