optimization The prerequisites are familiarity with the basic properties of matrices finite dimensional vector spaces and advanced calculus and some exposure to fundamental notions from functional analysis The book is divided into two parts The first part deals with numerical linear algebra numerical analysis of matrices direct and indirect methods for solving linear systems calculation of eigenvalues and eigenvectors and the second optimizations general algorithms linear and nonlinear programming Summaries of basic mathematics are provided proof of theorems are complete yet kept as simple as possible applications from physics and mechanics are discussed a great many exercises are included and there is a useful guide to further reading

Numerical Linear Algebra Folkmar Bornemann, 2018-01-29 This book offers an introduction to the algorithmic numerical thinking using basic problems of linear algebra By focusing on linear algebra it ensures a stronger thematic coherence than is otherwise found in introductory lectures on numerics The book highlights the usefulness of matrix partitioning compared to a component view leading not only to a clearer notation and shorter algorithms but also to significant runtime gains in modern computer architectures The algorithms and accompanying numerical examples are given in the programming environment MATLAB and additionally in an appendix in the future oriented freely accessible programming language Julia This book is suitable for a two hour lecture on numerical linear algebra from the second semester of a bachelor's degree in mathematics

Guaranteed Accuracy in Numerical Linear Algebra S.K. Godunov, A.G. Antonov, O.P. Kiriljuk, V.I. Kostin, 2013-03-14 There exists a vast literature on numerical methods of linear algebra In our bibliography list which is by far not complete we included some monographs on the subject 46 15 32 39 11 21 The present book is devoted to the theory of algorithms for a single problem of linear algebra namely for the problem of solving systems of linear equations with non full rank matrix of coefficients The solution of this problem splits into many steps the detailed discussion of which are interesting problems on their own bidiagonalization of matrices computation of singular values and eigenvalues procedures of deflation of singular values etc Moreover the theory of algorithms for solutions of the symmetric eigenvalues problem is closely related to the theory of solving linear systems Householder's algorithms of bidiagonalization and tridiagonalization eigenvalues and singular values etc It should be stressed that in this book we discuss algorithms which to computer programs having the virtue that the accuracy of computations is guaranteed As far as the final program product is concerned this means that the user always finds an unambiguous solution of his problem This solution might be of two kinds 1 Solution of the problem with an estimate of errors where absolutely all errors of input data and machine round offs are taken into account 2
