Simpson, David Raubenheimer, 2012-07-22 The first book to address nutrition s complex role in biology Nutrition has long been considered more the domain of medicine and agriculture than of the biological sciences yet it touches and shapes all aspects of the natural world The need for nutrients determines whether wild animals thrive how populations evolve and decline and how ecological communities are structured The Nature of Nutrition is the first book to address nutrition s enormously complex role in biology both at the level of individual organisms and in their broader ecological interactions Stephen Simpson and David Raubenheimer provide a comprehensive theoretical approach to the analysis of nutrition the Geometric Framework They show how it can help us to understand the links between nutrition and the biology of individual animals including the physiological mechanisms that determine the nutritional interactions of the animal with its environment and the consequences of these interactions in terms of health immune responses and lifespan Simpson and Raubenheimer explain how these effects translate into the collective behavior of groups and societies and in turn influence food webs and the structure of ecosystems Then they demonstrate how the Geometric Framework can be used to tackle issues in applied nutrition such as the problem of optimizing diets for livestock and endangered species and how it can also help to address the epidemic of human obesity and metabolic disease Drawing on a wealth of examples from

slime molds to humans The Nature of Nutrition has important applications in ecology evolution and physiology and offers promising solutions for human health conservation and agriculture

Immunomodulatory Functions of Nutritional Ingredients in Health and Disease Jia Sun,Paul de Vos,2019-04-09 Nutritional immunology is a rapidly developing field An expanding body of evidence demonstrates the impact of foods and nutritional components on gut and systemic immunity of consumers During recent years the implications of nutrition and nutritional intervention on prevention of disease have become accepted and has become an important tool in management of several diseases Nutritional immunology might become even more important in the prevention of disease when the interplay between nutritional processes and immune system is better understood Particularly specific cellular and molecular immune responses provoked by nutrition and the role of the gut barrier and microbiota in the interplay needs more study This content of eBook was designed to provide a timely collection on mechanistic translational and clinical research on the interplay between foods nutritional components and immunity in physiological and pathophysiological conditions

Armbricht,J.M. Prendergast,R.M. Coe, 2012-12-06 There has been much popular and scientific interest in the fields of nutrition and aging in recent years As the importance of proper nutrition in children and young adults becomes more fully understood it is natural to wonder if proper nutrition could play a similar role in later life Recent research has indicated that nutrition can potentially intervene in the aging process in at least two ways First studies in animals and humans have shown that nutrition can be used to improve functional status which in turn is related to perceived quality of life Second nutritional manipulation has been used to extend maximal life span in laboratory animals How these interesting findings apply to the human situation remains to be explored The purpose of this book is twofold The first is to present recent advances in our basic knowledge of how nutrition and aging interact with each other The second is to discuss some applications of this knowledge to the care of the elderly patient The interaction between aging and nutrition is complex because each may act on the other in either a synergistic or antagonistic fashion Aging may alter the nutritional status of the elderly by affecting the way nutrients are absorbed and utilized by the body Aging may also influence food intake and therefore nutritional status by decreasing the palatability of food The environment of the elderly may change so they are less likely to eat well balanced meals
