Nelson, 2007-08-27 Of all the literature I use while preparing field guides for the Food and Agriculture Organization of the United Nations Nelson's *Fishes of the World* is by far the one I refer to most often. This book is a standard reference I continue to use it extensively in the ichthyology courses I teach particularly in laboratory sessions.

Kent E. Carpenter, Old Dominion University *Fishes of the World* is a unique and essential resource for anyone seriously interested in the diversity and evolution of fishes. The family accounts provide quick summaries of current knowledge on all groups of living fishes and many key fossil taxa. It is a required work for every student in my laboratory.

William E. Bemis, Kingsbury, Director of Shoals Marine Laboratory, Cornell University. Only classics are known by the single name of their author and certainly Nelson's book has for four editions been such a book for all those who seek an accessible up to date readable reference on fish classification. Once again Nelson presents a balanced view of the sometimes tumultuous but ever exciting study of the phylogenetic relationships and classification of fishes. In doing so Nelson makes an excellent case for organismal biology highlighting the many and varied morphological characters we use to diagnose fish taxa and differentiate among the 515 families of living species.

Lynne R. Parenti, Curator of Fishes and Research Scientist, National Museum of Natural History, Smithsonian Institution. *Fishes of the World* Fourth Edition is the updated edition of a true classic in the field. A unique presentation of a modern cladistically based classification of all the major living and fossil fish groups, this indispensable reference helps scientists and others identify and classify specimens, make familial connections, understand the evolution of fishes and springboard into further research. The taxonomy of fishes presented includes the anatomical characteristics, distribution, common and scientific names and phylogenetic relationships for all 515 families of living fishes. Packed with representative species drawings and information on phylogenetic relationships, this informative Fourth Edition features both fossil and extant species. More than 500 illustrations. Fully vetted scientific and common names. An extensive bibliography.

**California Fish and Game**, 2009 **Sea of Cortez Marine Animals** Daniel Gotshall, 1998 This color field guide describes 189 species of fish and 65 species of invertebrates that are commonly observed by divers and snorkelers in this region. Each species is illustrated with a color photo. The narrative includes identification, maximum size, habitat, geographic range and in most cases natural history notes.

*Diving Pioneers and Innovators* Bret Gilliam, 2007. Manages to combine humour, adventure, tragedy, triumph, heroism and even some forays into the risqué while chronicling the careers of 20 personalities that helped make diving. This book presents the personal lives of this diving's heroes. It is illustrated with photographs that capture each interviewee throughout their diving careers.

*Undercurrent*, 2007 *Coral Reefs of the Eastern Tropical Pacific* Peter W. Glynn, Derek P. Manzello, Ian C. Enochs, 2016-08-12 This book documents and examines the state of health of coral reefs in the eastern tropical Pacific region. It touches on the occurrence of coral reefs in the waters of surrounding countries and it explores their biogeography, biodiversity and condition relative to the El Niño, southern oscillation and human impacts. Additionally contained within is a field that presents information on many of the species presented in the preceding chapters.

*Marine Animals of Baja California* Daniel Gotshall,1982      **Choice** ,2005      **Reef Fishes of the Sea of Cortez** Donald A. Thomson,Lloyd T. Findley,Alex N.
