**Regeneration of Vertebrate Sensory Receptor Cells** Gregory R. Bock, Julie Whelan, 2008-04-30 An international group of leading investigators discuss recent progress of sensory structures in lower and higher vertebrates Experts in two relevant fields the cell cycle and mitogenic growth factors present insightful contributions in the search for precursors and or stem cells in each sense organ plus the signals which regulate those precursors differentiation both in normal development and regeneration

*The Biology of Hagfishes* Jørgen Mørup Jørgensen, J.P. Lomholt, R.E. Weber, H. Malte, 2012-12-06 The hagfishes comprise a uniform group of some 60 species inhabiting the cool or deep parts of the oceans of both hemispheres They are considered the most primitive representatives of the group of craniate chordates which apart from the hagfishes that show no traces of vertebrate includes all vertebrate animals Consequently the hagfishes have played and still play a central role in discussions concerning the evolution of the vertebrates Although most of the focus on hagfishes may be the result of their being primitive it should not be forgotten that at the same time they are specialized animals with a unique way of life that is interesting in its own right It is now more than 30 years since a comprehensive treatise on hagfishes was published The Biology of Myxine edited by Alf Brodal and Ragnar Fänge Universitetsforlaget Oslo 1963 provided a wealth of information on the biology of hagfishes and over the years remained a major source of information and inspiration to students of hagfishes

*Growth Factors as Drugs for Neurological and Sensory Disorders* Gregory R. Bock, Jamie A. Goode, 2008-04-30 Degeneration of sensory receptors or of the nerves innervating them leads to a sensory deficit Various strategies have been tried for promoting regrowth of sensory receptors particularly in the eye and ear The latest data from experimental studies in animals are presented in the book including applications of BDNF and CNTF in the eye and epidermal growth factor in the ear

**Histology for Pathologists** Stacey Mills, 2019-02-01 Filled with more than 1 000 images the latest edition of this award winning comprehensive classic written by anatomic pathologists for anatomic pathologists has been updated with new information on surgical principles and techniques Like previous editions the book is designed to bridge the gap between normal histology and pathologic alterations

**Histology for Pathologists** Stacey E. Mills, 2012-07-16 A strong grounding in basic histology is essential for all pathologists However there had always been a gap between histology and pathology in which histologic information specifically for the pathologist was often lacking Histology for Pathologists deals with the microscopic features of normal human tissues from the perspective of the surgical pathologist This is the only text that uses human vs animal tissues for the histology It is the best reference in the literature for information on normal histology and as such is essential for all clinical pathologists Written by pathologists for pathologists the new edition updates the pathologist's understanding of normal histology up to date with the incremental advances made in the last five years The 3rd edition has become a classic purchased by virtually all residents beginning their pathology training as well as pathologists in practice The 4th edition builds on that substantial foundation The table of contents remains

essentially the same with the exception of some changes in authorship      **Current Catalog** National Library of Medicine (U.S.),1992 First multi year cumulation covers six years 1965-70      **Auditory Neuroscience** Proceedings of the National Academy of Sciences,Masakazu Konishi,2001-05      **Notch Signaling in Embryology and Cancer** Jörg Reichrath,Sandra Reichrath,2020-02-14 This thoroughly revised second edition is an up to date overview of the current knowledge of Notch and Notch signaling in embryology and cancer It discusses this topic from Notch's role in the development of the embryo to the Notch signaling pathway's role in the development of a number of cancers including breast cancer malignant melanoma Non melanoma skin cancer intestinal cancer and others In the years since the previous edition there have been numerous developments and insights within this rapidly moving field making this new edition urgently needed This volume also features discussions of current insights on Notch's role in senescence the regulation of Notch signaling by microRNAs Notch's role in the microbiome diet and its influence on Notch signaling and more Taken as a whole with its companion books *Molecular Biology of Notch Signaling* and *Notch Signaling in Cancer* this is a definitive discussion of the topic presented by internationally recognized contributors Presented in a coherent and accessible structure this revised and updated second edition is an essential and up to date guide for oncologists embryologists researchers and advanced students      National Library of Medicine Current Catalog National Library of Medicine (U.S.),1992      **Development, Growth and Senescence in the Chemical Senses** ,1993      **Auditory System Plasticity and Regeneration** Richard Salvi,1996 Contributions from leading international specialists critically document the rapid and substantive progress achieved in understanding plasticity and regeneration of the adult auditory system Articles synthesize what is currently known about the principles and mechanisms of hair cell regeneration and identify future research directions in this challenging area of hearing science

**Advances In Hearing Research - Proceedings Of The 10th International Symposium On Hearing** H Fastl,G M Klump,C Koppl,Geoffrey A Manley,1995-05-31 The main aim of the symposium on the hearing system is to provide a forum in which data ideas and models from both the physiological and psychoacoustical standpoints can be presented and discussed Apart from those areas traditionally covered by such meetings two areas with important recent advances have been included viz development and regeneration The present volume will be of interest to all scientists working in the field of auditory research      *Rehabilitation R & D Progress Reports* ,1991      Fish Physiology: Primitive Fishes ,2011-09-21 Primitive fishes are a relatively untapped resource in the scientific search for insights into the evolution of physiological systems in fishes and higher vertebrates Volume 26 in the Fish Physiology series presents what is known about the physiology of these fish in comparison with the two fish groups that dominate today the modern elasmobranchs and the teleosts Chapters include reviews on what is known about cardiovascular nervous and ventilatory systems gas exchange ion and nitrogenous waste regulation muscles and locomotion endocrine systems and reproduction Editors provide a thorough understanding of how these systems have evolved through piscine and vertebrate evolutionary history Primitive Fishes includes ground breaking

information in the field including highlights of the most unusual characteristics amongst the various species which might have allowed these fishes to persist virtually unchanged through evolutionary time This volume is essential for all comparative physiologists fish biologists and paleontologists Provides an analysis of the evolutionary significance of physiological adaptations in ancient fishes Offers insights on the evolution of higher vertebrates The only single source that presents an in depth discussion of topics related to the physiology of ancient fishes

**Regeneration and Development of the Nervous System in the Ascidian *Ciona Intestinalis* (L.)** Tomas Bollner,1992 International Review of Cytology V146,1993-09-01 International Review of Cytology V146 Animal Models in Eye Research ,2011-04-28 The eye is a complex sensory organ which enables visual perception of the world Thus the eye has several tissues that do different tasks One of the most basic aspects of eye function is the sensitivity of cells to light and its transduction through the optic nerve to the brain Different organisms use different ways to achieve these tasks In this sense eye function becomes a very important evolutionary aspect as well This book presents the different animal models that are commonly used for eye research and their uniqueness in evaluating different aspects of eye development evolution physiology and disease Presents information on the major animal models used in eye research including invertebrates and vertebrates Provides researchers with information needed to choose between model organisms Includes an introductory chapter on the different types of eyes stressing possible common molecular machinery

**Vomerolateral Chemoreception In Vertebrates: A Study Of The Second Nose** Charles Evans,2003-07-02 The Vomerolateral Organ is an olfactory structure in the nose originally described in 1813 by the Danish court veterinarian Ludwig Jacobson After some 150 years interest in it was reawakened following the discovery of its key role in social and sexual responses The organ serves to alert the emotional brain to the presence of specific semiochemicals or signal molecules which identify sex or status Typically such scents elicit responses at a non conscious level altering internal chemistry hormones in reaction to odours from the social environment pheromones The importance of vomerolateral olfaction has recently been confirmed by findings on the genetic basis of smell This book surveys the biology of the Organ of Jacobson from toads to tamarins It provides an analysis of the neural pathway which processes pheromonal information delivered by the second nose to the brain Vomerolateral olfaction is examined in its evolutionary perspective from molecular capture of scents to the consequent changes in reproductive activity The treatment integrates structural and functional aspects with the system s development and considers the implications of its unique genome The student or researcher is lead up to the edge of contemporary thinking by an overview of vomerolateral contributions to individual survival and to population dynamics The issues raised by recent research are evaluated in relation to the properties of primary olfaction Questions posed by the persistence of vomerolateral olfaction as a distinct sense are explored for man and other higher primates

Vallergha,2012-12-06 This book deals with the cellular biology biochemistry and physiology of photoreceptors and their interactions with the second order neurons bipolar and horizontal cells The focus is upon the contributions made by these neurons to vision Thus the basic neurobiology of the outer retina is related to the visual process and visual defects that could arise from abnormalities in this part of the retina are highlighted in the first 16 chapters Since all vertebrate retinas have the same basic structure and physiological plan examples are given from a variety of species with an emphasis upon mammals extending to human vision The last four chapters approach the problem from the other end This part of the book covers a range of clinical conditions involving visual abnormalities that are due to cellular defects in the outer retina Although the contents of this book do not represent the proceedings of a conference the concept arose at an international symposium on Recent Advances in Retinal Research which was held at the International Marine Centre in Oristano Sardinia We hope that the book will give a coherent up to date review of the neurobiology and clinical aspects of the outer retina and encourage further integration of these areas Retinal neurobiology has been an intense field of investigation for several decades More recently it has seen significant advances with the application of modern techniques of cell and molecular biology
