Regeneration Des Legumineuses Ligneuses Du Sahel Aau Reports 28:

Régénération des légumineuses ligneuses du Sahel Knud Tybirk, 1991 French edition of Regeneration of Woody Legumes in Sahel *Bulletin of the International Group for the Study of Mimosoideae*, 1991 **AETFAT bulletin** Association pour l'étude taxonomique de la flora d'Afrique tropicale, 1992 Initiation à l'agroforesterie en zone sahélienne Daniel Yves Alexandre, 2002-01-01 Traditionnellement les systèmes agricoles du Sahel sont caractérisés par une présence importante des arbres. Quand la place ne manque pas, ceux-ci offrent leur ombre, une protection des sols et de nombreux produits. Le plus représentatif des systèmes traditionnels est le système dit du parc où les arbres kariténs etc. sont dispersés au-dessus des cultures de céréales. Les systèmes anciens ont su exploiter l'importante variété des arbres pour mettre en valeur la diversité des sols. On trouve par exemple les arbres exigeants sur les sols profonds et les arbres frugaux sur sols minces. Confrontés à une forte croissance démographique, les sociétés sahéliennes doivent accroître leur production. L'intensification agricole qui passe par un raccourcissement des temps de jachère, l'introduction de la charrue et une concurrence accrue vis-à-vis des cultures conduit la disparition progressive des arbres et une dégradation des sols et une perte de ressources. Pour permettre aux pratiques agricoles de s'adapter aux conditions actuelles, il importe de mieux connaître les arbres du Sahel, qui sont ils, quels sont leurs produits, leurs effets sur l'écosystème et leurs rôles sociaux. L'arbre n'est pas la panacée qui résoudra tous les problèmes, mais c'est une ressource importante. C'est aussi un témoin de l'histoire des paysages et c'est dans les lieux de cette histoire que l'on peut trouver de nouveaux scénarios de développement. Cet ouvrage d'agroforesterie discipline scientifique nouvelle qui veut concilier savoirs agronomiques et forestiers longtemps contradictoires propose une approche originale systémique et globale des plantes des champs et des terroirs. Après une réflexion de fond sur l'arbre et sa place dans les systèmes agricoles sahéliens, l'auteur s'attache nous faire mieux connaître les principales espèces rencontrées. La majorité des exemples provient de son expérience au Burkina Faso, mais des exemples sont également pris au Sénégal, au Mali, en Côte d'Ivoire.

Woody Plants in Agro-Ecosystems of Semi-Arid Regions Henk Breman, Jan-Joost Kessler, 2012-12-06 This book provides a quantitative analysis of the role of woody plants in semi arid regions for the assessment of their benefits in agrosilvopastoral land use systems with productive and sustainability objectives. The insights presented and conclusions drawn allow the additional benefits of woody plants for specific climatic and physical site conditions and land use systems to be estimated. The Sahel and Sudan zones in West Africa on which the book focusses represent resource poor conditions whose ecological dynamics have been relatively well studied. The role of woody plants in this region as assessed in this book is extrapolated to other semi arid regions leading to general conclusions on agroforestry's potential as an option for sustainable land use in semi arid regions. The origins of this book go back to 1982 when the Club du Sahel requested that available data on woody plants in the Sahel region be synthesised to provide basic information to enable better attention to be given to woody plants in rural development programmes. We are grateful to the Club du Sahel for this challenge. Various

people contributed to studies used in this book The preliminary inventory of the data available was made by Frits Ohler later his work was continued by Franciska Dekker

Field Guide to Palms in Papua New Guinea Anders S. Barfod, Roy Banka, John L. Dowe, 2001 Within Southeast Asia there are over 1000 species of palms and two centers of diversity Sumatra, Borneo and the Malay Peninsula constitute one such center The other is the world's second largest island New Guinea which is estimated to have over 300 species Palms are generally poorly represented in herbaria mainly because they are avoided by non specialists Collecting palms is hard work and unless it is correctly done the specimens will contain little information This applies particularly to the large tree palms The aim of the book is to stimulate interest in Papua New Guinea palms The guide contains a multi access key which is very flexible and easy to use even though information is sparse It is based on 42 simple characters All technical terms are explained in a
