Mapping Vulnerability Greg Bankoff, Dorothea Hilhorst, George Frerks, 2013-06-17 Raging floods massive storms and cataclysmic earthquakes every year up to 340 million people are affected by these and other disasters which cause loss of life and damage to personal property agriculture and infrastructure So what can be done The key to understanding the causes of disasters and mitigating their impacts is the concept of vulnerability Mapping Vulnerability analyses vulnerability as a concept central to the way we understand disasters and their magnitude and impact Written and edited by a distinguished group of disaster scholars and practitioners this book is a counterbalance to those technocratic approaches that limit themselves to simply looking at disasters as natural phenomena Through the notion of vulnerability the authors stress the importance of social processes and human environmental interactions as causal agents in the making of disasters They critically examine what renders communities unsafe a condition they argue that depends primarily on the relative position of advantage or disadvantage that a particular group occupies within a society's social order The book also looks at vulnerability in terms of its relationship to development and its impact on policy and people's lives through consideration of selected case studies drawn from Africa Asia and Latin America Mapping Vulnerability is essential reading for academics students policymakers and practitioners in disaster studies geography development studies economics environmental studies and sociology
