Sex Determination, Differentiation and Intersexuality in Placental Mammals R. H. F. Hunter, 1995-03-09 How do males become male and females become female And what are the consequences if the decision is not incisive Drawing upon interests in animal genetics and molecular biology the author endeavours to answer these difficult yet fascinating questions Originally published in 1995 this book describes the genetic determination of sex and examines how sexual organs are differentiated Using examples of intersexuality chimaeras and asymmetries the book describes the underlying molecular basis of sex determination and sexual differentiation and focuses on the critical role of the rate of embryonic development in these vital processes Male precocity is a recurrent theme as is the involvement of Sertoli cells and their secretion of anti Mllerian hormone An invaluable book for reproductive physiologists geneticists and developmental biologists whose interests may extend from animal science through veterinary medicine to human clinical medicine

The Genetics and Biology of Sex Determination Derek J. Chadwick,Jamie A. Goode,2002-04-26 Nature employs a wide variety of sex determining mechanisms and it is only comparatively recently that the tools have become available for these to be explored at the cellular and molecular levels A major landmark was the discovery in 1990 of the SRY gene and the subsequent demonstration of its key role in triggering male sex determination in transgenic mice This book reviews and discusses our current understanding of the molecular genetic pathways of sex determination with special emphasis on vertebrates It features comparisons with other modes of sex determination consideration of the biology of sexual development and discussion of the evolution of sex determining mechanisms By bringing together an international and interdisciplinary group of experts who study many different aspects of the problem the book highlights much new and exciting work in this area and serves to identify and stimulate promising new research directions **The 7 Sexes** Elof Axel Carlson,2013-02-12 What makes us male or female A geneticist explains the history of scientific research into human sexuality and reproduction In this book geneticist and science historian Elof Carlson tells the incredible story of the difficult quest to understand how the body forms girls and boys Carlson s history takes us from antiquity to the present day to detail how each component of human reproduction and sexuality was identified and studied how this knowledge enlarged our understanding of sex determination and how it was employed to interpret such little understood aspects of human biology as the origin of intersex births Reveals the various scientific advances in both methods and understanding that allowed researchers to identify anatomical structures gametes sex hormones sex chromosomes and ultimately a firm comprehension of the genetics of sex This scientific story of discovery is quite fascinating Barbara Baumgartner Washington University St Louis **Pathology and Epidemiology of Cancer** Massimo Loda,Lorelei A. Mucci,Megan L. Mittelstadt,Mieke Van Hemelrijck,Maura Bríd Cotter,2016-09-01 This book integrates the disciplines of cancer pathology and epidemiology to provide a synergistic and complementary approach to understanding the molecular mechanisms of cancer This book provides relevant information on the diagnostic prognostic and predictive molecular pathology of cancer Epidemiological studies including descriptive epidemiology risk factors and molecular mechanisms of disease inform on the etiology and progression of cancer The text concentrates on major cancers that are currently prevalent and those for which substantial molecular pathological and epidemiological data is available Each section is designed to provide an overview of that cancer type in terms of basic biology review the current epidemiological data surrounding that cancer type and provide information on common practices and challenges related to the molecular pathology of that cancer type Several relevant techniques in molecular pathology which facilitate diagnosis and treatment are also explored Pathology and Epidemiology of Cancer provides a succinct and comprehensive overview of multiple cancer types to guide clinicians during patient care and to guide

scientists for innovations in research It represents an integral resource for pathologists epidemiologists medical students as well as translational basic and clinical science researchers who are all working to progress the field of cancer in terms of diagnosis treatment and prevention

The Genetics of the Pig Max Frederick Rothschild, Anatoly Ruvinsky, 2011 The understanding of pig genetics and genomics has advanced significantly in recent years creating fresh insights into biological processes This comprehensive reference work discusses pig genetics and its integration with livestock management and production technology to improve performance Fully updated throughout to reflect advances in the subject this new edition also includes new information on genetic aspects of domestication colour variation genomics and pig breeds with contributions from international experts active in the field

Sexing the Body Anne Fausto-Sterling, 2020-06-30 Now updated with groundbreaking research this award winning classic examines the construction of sexual identity in biology society and history Why do some people prefer heterosexual love while others fancy the same sex Is sexual identity biologically determined or a product of convention In this brilliant and provocative book the acclaimed author of *Myths of Gender* argues that even the most fundamental knowledge about sex is shaped by the culture in which scientific knowledge is produced Drawing on astonishing real life cases and a probing analysis of centuries of scientific research Fausto Sterling demonstrates how scientists have historically politicized the body In lively and impassioned prose she breaks down three key dualisms sex gender nature nurture and real constructed and asserts that individuals born as mixtures of male and female exist as one of five natural human variants and as such should not be forced to compromise their differences to fit a flawed societal definition of normality

Knobil and Neill's Physiology of Reproduction Ernst Knobil, 2006 The 3rd edition the first new one in ten years includes coverage of molecular levels of detail arising from the last decade's explosion of information at this level of organismic organization There are 5 new Associate Editors and about 2/3 of the chapters have new authors Chapters prepared by return authors are extensively revised Several new chapters have been added on the topic of pregnancy reflecting the vigorous investigation of this topic during the last decade The information covered includes both human and experimental animals basic principles are sought and information at the organismic and molecular levels are presented The leading comprehensive work on the physiology of reproduction Edited and authored by the world's leading scientists in the field Is a synthesis of the molecular cellular and organismic levels of organization Bibliographies of chapters are extensive and cover all the relevant literature

Engendering Psychology Florence Denmark, Vita Carulli Rabinowitz, Jeri A. Sechzer, 2016-01-08 Engendering Psychology's treatment of issues is based solidly on scientific evidence and presented in a balanced manner The text combines a developmental and topical approach Denmark Rabinowitz and Sechzer explore the concept of gender as a social construction across the lines of race ethnicity class age and sexual orientation pulling from the exciting new scholarship that has emerged over the last few years Thoughtful discussion questions emphasize critical thinking skills as well as encourage students to open a dialogue with both their professors and their peers This text will help

readers understand the concept of gender as a social construct in contrast to the concept of sex which denotes biological differences Upon completing this text readers will have a deeper understanding of women and the knowledge that woman is a diverse and multifaceted category *Lucy's Legacy* Alison Jolly,2001 Takes a look at human evolution focusing on the long line of women and of female behavior that was to follow the age of the much studied oldest human remains Twentieth Century Mouse Genetics Robert P. Erickson,2021-08-26 Twentieth Century Mouse Genetics A Historical and Scientific Review provides a comprehensive examination of key advances in mouse genetics throughout the 20th century Here Dr Robert P Erickson a leader in the field identifies the contributions of historic mouse genetics studies and how those approaches and early discoveries are still shaping human genetics research and medical genetics today In addition to historical overviews the author provides researcher biographies and updates connecting historic research to ongoing advances Past studies discussed use the T t complex as an example and include the origins of mouse genetics the synthesis of genetics and evolution cytogenetics and gene mapping population genetics and mutation research immunogenetics reproductive genetics molecular cloning X inactivation and epigenetics sex determination and pharmacogenetics Here researchers students and clinicians will find fresh inspiration to engage in human genetics research employing mouse models and to translate those findings to clinical practice Offers a comprehensive examination of key advances in mouse genetics throughout the 20th century Includes updates connecting historic research to ongoing advances Authored by a thought leader in the field Physiology of the Graafian Follicle and Ovulation R. H. F. Hunter,2003-05 The development and selection of ovarian follicles is one of the most active areas of contemporary reproductive research Relevant experimental work extends from laboratory rodents across a wide range of domestic species to human clinical studies especially as related to problems of fertility and in vitro fertilisation This 2003 volume provides comprehensive coverage of the field integrating research findings from animal and human studies and condensing the vast published literature into a meaningful and digestible physiological account which highlights the key role played by the oocyte in influencing all stages of follicular development **Darwinian Natural Right** Larry Arnhart,1998-01-01 This book shows how Darwinian biology supports an Aristotelian view of ethics as rooted in human nature Defending a conception of Darwinian natural right based on the claim that the good is the desirable the author argues that there are at least twenty natural desires that are universal to all human societies because they are based in human biology The satisfaction of these natural desires constitutes a universal standard for judging social practice as either fulfilling or frustrating human nature although prudence is required in judging what is best for particular circumstances The author studies the familial bonding of parents and children and the conjugal bonding of men and women as illustrating social behavior that conforms to Darwinian natural right He also studies slavery and psychopathy as illustrating social behavior that contradicts Darwinian natural right He argues as well that the natural moral sense does not require religious belief although such belief can sometimes reinforce the dictates of nature Monoclonal

Antibodies James W. Goding, 1996-02-26 Monoclonal Antibodies now have applications in virtually all areas of biology and medicine and much of the world's biotechnology industry has its foundations in the exploitation of this technology The Third Edition of this well established book meets the needs of both newcomers to the area and experienced researchers by providing an integrated treatment of both the production and application of monoclonal antibodies As in previous editions detailed and critical accounts of the theory production purification fragmentation storage and radiolabelling of monoclonal antibodies are given along with descriptions of their use in antigen characterization affinity chromatography and immunofluorescence The present volume has been comprehensively updated to cover recent rapid advances particularly with respect to the applications of molecular biology the use of antibodies in cloning and heterologous expression of genes immunohistology and phage display libraries Since the previous edition there has been a growing trend towards the replacement of procedures using radioactive isotopes and the current edition incorporates these newer technologies The text is oriented towards problems solving and makes it easy to adapt each procedure to individual needs Extensive cross referencing a glossary and a comprehensive index make this book an essential reference This book will be vital both for laboratories already producing or using monoclonal antibodies and for workers in many disciplines who are contemplating their use Provides an integrated treatment of both the production and application of monoclonals in cell biology biochemistry and immunology Gives detailed and critical accounts of the theory production purification storage and relabelling of monoclonals and their use in antigen characterization affinity chromatography and immunofluorescence Comprehensively updated to cover the rapid advances that have occurred since the publication of the Second Edition Paediatric and Adolescent Gynaecology Adam H. Balen, Sarah M. Creighton, Melanie C.
