Ice Mariana Gosnell, 2011-04-27 Like the adventurer who circled an iceberg to see it on all sides Mariana Gosnell former Newsweek reporter and author of *Zero Three Bravo* a book about flying a small plane around the United States explores ice in all its complexity grandeur and significance More brittle than glass at times stronger than steel at other times flowing like molasses ice covers 10 percent of the earth's land and 7 percent of its oceans In nature it is found in myriad forms from the delicate needle ice that crunches underfoot in a winter meadow to the massive centuries old ice that forms the world's glaciers Scientists theorize that icy comets delivered to Earth the molecules needed to get life started and ice ages have shaped much of the land as we know it Here is the whole world of ice from the freezing of Pleasant Lake in New Hampshire to the breakup of a Vermont river at the onset of spring from the frozen Antarctic landscape that emperor penguins inhabit to the cold watery route bowhead whales take between Arctic ice floes Mariana Gosnell writes about frostbite and about the recently discovered 5 000 year old body of a man preserved in an Alpine glacier She discusses the work of scientists who extract cylinders of Greenland ice to study the history of the earth's climate and try to predict its future She examines ice in plants icebergs icicles and hail sea ice and permafrost ice on Mars and in the rings of Saturn and several new forms of ice developed in labs She writes of the many uses humans make of ice including ice skating ice fishing iceboating and ice climbing building ice roads and seeding clouds making ice castles ice cubes and iced desserts Ice is a sparkling illumination of the natural phenomenon whose ebbs and flows over time have helped form the world we live in It is a pleasure to read and important to read for its natural science and revelations about ice's influence on our everyday lives and for what it has to tell us about our environment today and in the future

Mountains Figured and Disfigured in the English-Speaking World Françoise Besson, 2020-06-01 The essays in this book written by poets novelists mountain climbers and academics from all over the world evoke the representation of mountains in the English speaking world as artists writers philosophers or mountain climbers have represented them from the sixteenth to the twenty first centuries From the Alps to the Pyrenees from Mount Fuji to Mount Shasta from the Himalayas to the Scottish Highlands from Ikere in Nigeria to Devil's Tower in the United States from Uluru in Australia to the most northern mountain of the Arctic the shapes of the world speak the same language and tell the world its own story This interdisciplinary book weaving together mountaineering literature philosophy painting cinema ecology history palaeontology geography geopolitics toponymy law religion and myth invites

people to an innovative reading of mountains it reveals the close relationship existing between the shapes of the world and all forms of writing and at the same time it shows how the representations of the imagination may be instrumental in protecting the natural world The story told by the landscape inscribes a broken line in the shapes of the world tearing the landscape like a fragile page whenever historical and political events wars mining or deforestation leave scars in the landscape but writers and artists representations of mountains constitute a path to awareness as they are not only a painting of beauty but an image of our link to nature and a warning as well For centuries the image of the mountain has conveyed a symbolism telling the story of human thought and this book shows to what extent literature and art play an essential part in our awareness of nature

The Theory of Architecture Paul-Alan Johnson,1994-04-18 The Theory of Architecture Concepts Themes Practices Paul Alan Johnson Although it has long been thought that theory directs architectural practice no one has explained precisely how the connection between theory and practice is supposed to work This guide asserts that architectural theory does not direct practice but is itself a form of reflective practice Paul Alan Johnson cuts through the jargon and mystery of architectural theory to clarify how it relates to actual applications in the field He also reveals the connections between new and old ideas to enhance the reader s powers of critical evaluation Nearly 100 major concepts themes and practices of architecture as well as the rhetoric of architects and designers are presented in an easily accessible format Throughout Johnson attempts to reduce each architectural notion into its essential concept By doing so he makes theory accessible for everyday professional discussion Topics are arranged under ten headings identification definition power attitudes ethics order authority governance relationship and expression Areas covered under these headings include Utopic thought in theories of architecture Advocacy and citizen participation in architecture The basis of architectural quality and excellence The roles of the architect as artist poet scientist and technologist Ethical obligations of architecture Rationales for models and methods of design How authority is determined in architecture How architects structure their concepts Conventions of communication within the architectural profession Each section begins by showing the etymology of key terms of the topic discussed along with a summary history of the topic s use in architecture Discussions probe the conceptual and philosophical difficulties of different theories as well as their potential and limitations in past and present usage Among the provocative issues discussed in terms of their relationship to architecture are chaos theory feminism service to the community and the use of metaphor Johnson points out with stunning clarity the intentions as well as the contradictions and inconsistencies of all notions and concepts All architects and designers as well as students and teachers in these disciplines will gain many insights about architectural thought in this groundbreaking text
