Modelling and Analysis in Arms Control Rudolf Avenhaus, Reiner K. Huber, John D. Kettelle, 2012-12-06 This book presents the results of an international workshop on Modelling and Analysis of Arms Control Problems held in Spitzingsee near Munich in October 1985 under the joint sponsorship of NATO's Scientific Affairs Division and the Volkswagen Foundation The idea for this workshop evolved in 1983 as a consequence of discussions in the annual Systems Science Seminar at the Computer Science Department of the Federal Armed Forces University 1 Munich on the topic of Quantitative Assessment in Arms Control 1 There was wide agreement among the contributors to that seminar and its participants that those efforts to assess the potential contributions of systems and decision sciences as well as systems analysis and mathematical modelling to arms control issues should be expanded and a forum should be provided for this activity It was further agreed that such a forum should include political scientists and policy analysts working in the area of arms control *Samson Abramsky on Logic and Structure in Computer Science and Beyond* Alessandra Palmigiano, Mehrnoosh Sadrzadeh, 2023-08-01 Samson

Abramsky's wide ranging contributions to logical and structural aspects of Computer Science have had a major influence on the field. This book is a rich collection of papers inspired by and extending Abramsky's work. It contains both survey material and new results organised around six major themes: domains and duality, game semantics, contextuality and quantum computation, comonads and descriptive complexity, categorical and logical semantics and probabilistic computation. These relate to different stages and aspects of Abramsky's work reflecting its exceptionally broad scope and his ability to illuminate and unify diverse topics. Chapters in the volume include a review of his entire body of work spanning from philosophical aspects to logic programming, language theory, quantum theory, economics and psychology and relating it to a theory of unification of sciences using dual adjunctions. The section on game semantics shows how Abramsky's work has led to a powerful new paradigm for the semantics of computation. The work on contextuality and categorical quantum mechanics has been highly influential and provides the foundation for increasingly widely used methods in quantum computing. The work on comonads and descriptive complexity is building bridges between currently disjoint research areas in computer science relating Structure to Power. The volume also includes a scientific autobiography and an overview of the contributions. The outstanding set of contributors to this volume including both senior and early career academics serve as testament to Samson Abramsky's enduring influence. It will provide an invaluable and unique resource for both students and established researchers.
