Rivers Of Change:

Geomorphic Analysis of River Systems Kirstie A. Fryirs, Gary J. Brierley, 2012-12-10 Filling a niche in the geomorphology teaching market this introductory book is built around a 12 week course in fluvial geomorphology Reading the landscape entails making sense of what a riverscape looks like how it works how it has evolved over time and how alterations to one part of a catchment may have secondary consequences elsewhere over different timeframes These place based field analyses are framed within their topographic climatic and environmental context Issues and principles presented in the first part of this book provide foundational understandings that underpin the approach to reading the landscape that is presented in the second half of the book In reading the landscape detective style investigations and interpretations are tied to theoretical and conceptual principles to generate catchment specific analyses of river character behaviour and evolution including responses to human disturbance This book has been constructed as an introductory text on river landscapes providing a bridge and or companion to quantitatively framed or modelled approaches to landscape analysis that are addressed elsewhere Key principles outlined in the book emphasise the importance of complexity contingency and emergence in interpreting the character behaviour and evolution of any given system The target audience is second and third year undergraduate students in geomorphology hydrology earth science and environmental science as well as river practitioners who use geomorphic understandings to guide scientific and or management applications The primary focus of Kirstie and Gary s research and teaching entails the use of geomorphic principles as a tool with which to develop coherent scientific understandings of river systems and the application of these understandings in management practice Kirstie and Gary are co developers of the River Styles Framework and Short Course that is widely used in river management decision making and training Additional resources for this book can be found at www.wiley.com/go/fryirs_riversystems

Superintendent of Documents, 1967-07 **Gravel-bed Rivers in the Environment** Peter C. Klingeman, Paul D. Komar, Robert L. Beschta, 1998 Read what over 60 internationally recognized authors say about fluvial processes the environment and management of gravel bed rivers Learn about efforts to restore more natural ecosystem functions to adversely impacted rivers And for some mind stretching consider the hydraulic geomorphic implications of cataclysmic floods on Earth and Mars Beginning in 1980 and held at five year intervals these workshops have brought together leading international researchers to present and discuss new results concepts and state of the art methods to analyze fluvial processes in and manage gravel bed rivers The fourth workshop was held at Gold Bar Washington near the dynamic Skykomish River and strikingly beautiful Cascade Mountains Workshop papers and discussions are published to document new concepts and ideas for broad use by those who study manage or have general interests in rivers This fourth Gravel Bed Rivers Workshop covers three focus topics The first topic reviews new developments regarding fluvial processes sediment transport and channel morphology in eight chapters on distinct subjects The second and third focus topics strongly emphasize gravel bed rivers in the environment their influences and their management in the next 19 chapters River

restoration is examined for large European and North American rivers as parts of several of the environment management chapters Seven appended short papers report on research in progress presented at the Workshop in a poster discussion session Also included are two special interest chapters on giving a detailed analysis and morphologic hydraulic interpretation of cataclysmic floods and one summarizing a field exercise in management options for a long braided meandering reach of the Skykomish River near Gold Bar Publisher's description *Little Wood River Irrigation District, Gravity Pressurized Delivery System*, 2004 Rivers: A Very Short Introduction Nick Middleton, 2012-04-26 Rivers have played an extraordinarily important role in creating the world in which we live They create landscapes and provide water to people plants and animals nourishing both town and country The flow of rivers has enthused poets and painters explorers and pilgrims Rivers have acted as cradles for civilization and agents of disaster a river may be a barrier or a highway it can bear trade and sediment culture and conflict A river may inspire or it may terrify This Very Short Introduction is a celebration of rivers in all their diversity Nick Middleton covers a wide and eclectic range of river based themes from physical geography to mythology to industrial history and literary criticism Worshipped and revered respected and feared rivers reflect both the natural and social history of our planet ABOUT THE SERIES The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area These pocket sized books are the perfect way to get ahead in a new subject quickly Our expert authors combine facts analysis perspective new ideas and enthusiasm to make interesting and challenging topics highly readable **National Waterways Roundtable**, 1980 **Geomorphology** Mateo Gutierrez, 2012-12-07 This book provides a detailed coverage of the landforms of Planet Earth and the processes that shaped them The study of these morphologies some of which formed during past geological periods under environmental conditions very different from those of today makes it possible to reconstruct the evolution of relief and to infer environmental changes that have involved geological media the climate or human activity A major advance of Geomorphology in recent decades is the development of techniques that make it possible to quantify morphogenetic processes and rates at which forms change under different environmental conditions The development of Geochronology or absolute dating methods is helping us correct the limitations of relative dating that have prevailed in Geomorphology for many years The ability to assign numerical ages to both landforms and deposits opens up multiple possibilities for reconstructing the evolution of relief making correlations calculating rates and estimating recurrence periods A theme of major concern facing people today is the possible warming of the planet due to the release of greenhouse gases into the environment Investigations conducted by the scientific community show that this temperature increase is at least partially anthropogenic Given this more than probable cause and effect relationship the most sensible and prudent path is to design and apply mitigation measures to alleviate this heating that can negatively affect both the natural environment and human society The information that Geomorphology can provide on the recent past Historical Geomorphology may be very useful in making predictions on the activity of these

potentially dangerous processes in the future and on the possible effects of environmental changes The aim of this book is to provide a general vision of the multiple aspects of Geomorphology and to provide a methodological foundation to approach the study of various branches of geomorphology To this end the book contains a basic bibliography that can be used for future research In addition applied aspects of Geomorphology are covered at the end of each chapter to provide knowledge of the activities of geomorphologists in the professional world

Managing Urban River Ecosystems for Achieving Regional Sustainability in the Pearl River Delta Region Hui Liu, 2024-12-13 This book provides a systematic understanding of urban river management from the perspective of ecosystem health in the Pearl River Delta region of China where rapid socio economic development happens together with exploitation and pollution of the natural environment Urban rivers which used to support navigation and provide water resources to humans now suffer from various kinds of ecosystem degradation and thus create threats to regional sustainability This book treats the urban river as an ecosystem which closely relates to and interacts with humans and defines urban river ecosystem health as a requirement at three levels sensorial fitness living water and affinity with humans which emphasizes more on the human oriented needs The evolution processes of urban river ecosystem health protection can generally be divided into four phases demonstrating the relationships between human activities and UREH status as simple balance uncontrolled imbalance continuous interlocking and stable harmony The relationships between typical urban rivers and humans in the Pearl River Delta region China are then analyzed on both regional and local scales and from lateral time longitudinal and spatial dimensions Intensive human activities together with the intrinsic complex and high density river network result in deteriorating water quality changing hydrological conditions and damaging the river ecosystem in this region From the perspective of political ecology various actors in urban river management include governmental agencies business multilateral institutions ENGOs and grassroots actors whose unequal power relations vary over time and space causing conflicts as well as coordination Especially different governmental agencies are engaged resulting into overlap and gap among their functions as well as spatial discrepancy River Chief System as a new practice of urban river management has strengthened the collaboration effect and got success in river pollution control The spatial scale effect of human activities on urban river water quality is examined implying the necessity of adopting a unified management strategy at the buffer zone scale to protect and restore urban river ecosystem health The target audience of this book includes postgraduate students and researchers who have research interests in as well as government officers whose routine is related to water management

Fundamentals of Fluvial Geomorphology Ro Charlton,2007-11-12 Fundamentals of Fluvial Geomorphology will be an indispensable introductory text for first and second year undergraduates providing a clear understanding of how the fluvial system operates at different spatial and temporal scales River Sedimentation Silke Wieprecht,Stefan Haun,Karolin Weber,Markus Noack,Kristina Terheiden,2016-11-30 Sediment dynamics in fluvial systems is of great ecological economic and human health related significance worldwide Appropriate management strategies are therefore needed to limit maintenance costs as well as minimize potential hazards to the aquatic and adjacent environments Human intervention ranging from nutrient pollutant release to physical modifications has a large impact on sediment quantity and quality and thus on river morphology as well as on ecological functioning Truly understanding sediment dynamics requires as a consequence a multidisciplinary approach River Sedimentation contains the peer reviewed scientific contributions presented at the 13th International Symposium on River Sedimentation ISRS 2016 Stuttgart Germany 19 22 September 2016 and includes recent accomplishments in theoretical developments numerical modelling experimental laboratory work field investigations and monitoring as well as management methodologies

Earth's Changing Rivers Neil Morris,2003 Looks at the geography and people that make up river regions throughout the world focusing on the changing characteristics of both Alabama Rivers, A Celebration and Challenge William G. Deutsch,2019-06-18 ALABAMA RIVERS A CELEBRATION AND CHALLENGE invites you to travel down rivers and through time to encounter the rich human history and natural wonders that have defined Alabama Along the way you will celebrate an array of magnificent rivers filled with unique plants

and animals shaped over the ages by a remarkably diverse geology You will appreciate how rivers have served people from the first Paleo Indian settlements to the present Accept the challenge to restore and protect our rivers for their economic cultural and ecological benefits but most of all because it is the right thing to do **River Biota** Peter P. Calow, 2009-07-08

As with all ecosystems river systems involve a complex interaction of a rich diversity of micro organisms plants and animals with their physical and chemical environment The river habitat presents unique problems for organisms exposed to unidirectional currents seasonal variation in flow and disturbance due to pollution and other human interference The book starts with a description of the taxa their adaptations and their ecologies followed by chapters describing the ecosystem processes in terms of trophic interactions and the key production processes related to photosynthesis and decomposition A major chapter then considers the principles practices and problems associated with making reliable observations on river organisms leading to final chapters investigating how river biota are impacted by human activity and how in turn they can be used as indicators of these effects in river management programmes *Floodplain Management Assessment of the Upper Mississippi River and Lower Missouri Rivers and Tributaries* ,1995
