Agam, 2012-12-02 The special world of industrial chemistry is illuminated in this text Issues such as naming and classification of chemicals safety formulations and specifications information and patents are treated Process related topics are discussed such as scaling up equipment selection construction materials environmental impact and waste minimization Aspects which fall in between the traditional disciplines of chemistry and chemical engineering are covered which are so critical for the development of a successful industrial process and the awareness of which avoids pitfalls in industrial research and development Case studies are given and special appendices provide useful information for the industrial chemist or student The book is aimed at industrial chemists and engineers and at students in those faculties intending to pursue this field in industry Marketing and purchasing staff will also find this text valuable **Industrial Hygiene Control of Airborne Chemical Hazards** William Popenorf, 2006-05-15 Do you need guidelines for choosing a substitute organic solvent that is safer to use Do you need an effective cheap but perhaps temporary way to reduce exposures before you can convince your employer to spend money on a long term or more reliable solution Do you need information about local exhaust ventilation or personal protective equipment like respirators and gloves Industrial Hygiene Control of Airborne Chemical Hazards provides the answers to these questions and more Science based and quantitative the book introduces methods for controlling exposures in diverse settings focusing squarely on airborne chemical hazards It bridges the gap between existing knowledge of physical principles and their modern application with a wealth of recommendations techniques and tools accumulated by generations of IH practitioners to control chemical hazards Provides a unique comprehensive tool for facing the challenges of controlling chemical hazards in the workplace Although William Popenorf has written the book at a fundamental level he assumes the reader has some experience in science and math as well as in manufacturing or other work settings with chemical hazards but is inexperienced in the selection design implementation or management of chemical exposure control systems Where the book

is quantitative of course there are lots of formulae but in general the author avoids vague notation and long derivations
