during the next 20 years The book is based on the international conference River Conservation and Management 20 Years On held at York Thirty one chapters with contributions from North and South America Europe Asia and Australasia provide a wide ranging perspective on this complex but profoundly important subject Following an introduction that chronicles the most important contextual changes the book is organized into four broad topics Catchment management ecosystem integrity and the threats to river ecosystems this covers progress on understanding and addressing the pressures affecting rivers many of which will be amplified by climate change and increasing human demands for water Methods and approaches illustrating some recent techniques that have been developed to assess condition and conservation status across different types of river Recovery and rehabilitation providing an insight into the principles practice public involvement and institutional networks that support and make improvements to modified river reaches Integrating nature conservation into wider river management demonstrating the importance of integrated planning involvement of local communities and the use of adaptive management in achieving multiple environmental and economic benefits along rivers used for different purposes The final chapter discusses the challenges faced in dealing with an uncertain future More than 1200 different references and numerous web site citations provide the reader with an invaluable source of knowledge on the subject area River Biota

Peter P. Calow,2009-07-08 As with all ecosystems river systems involve a complex interaction of a rich diversity of micro organisms plants and animals with their physical and chemical environment The river habitat presents unique problems for organisms exposed to unidirectional currents seasonal variation in flow and disturbance due to pollution and other human interference The book starts with a description of the taxa their adaptations and their ecologies followed by chapters describing the ecosystem processes in terms of trophic interactions and the key production processes related to photosynthesis and decomposition A major chapter then considers the principles practices and problems associated with making reliable observations on river organisms leading to final chapters investigating how river biota are impacted by human activity and how in turn they can be used as indicators of these effects in river management programmes *The Routledge Handbook of Landscape Ecology* Robert A. Francis,James D.A. Millington,George L.W. Perry,Emily S. Minor,2021-09-08 The Handbook provides a supporting guide to key aspects and applications of landscape ecology to underpin its research and teaching A wide range of contributions written by expert researchers in the field summarize the latest knowledge on landscape ecology theory and concepts landscape processes methods and tools and emerging frontiers Landscape ecology is an interdisciplinary and holistic discipline and this is reflected in the chapters contained in this Handbook Authors from varying disciplinary backgrounds tackle key concepts such as landscape structure and function scale and connectivity landscape processes such as disturbance flows and fragmentation methods such as remote sensing and mapping fieldwork pattern analysis modelling and participation and engagement in landscape planning and emerging frontiers such as ecosystem services landscape approaches to biodiversity conservation and climate change Each chapter
