large scale and complex airport investments need a detailed long medium term planning of airport infrastructure Such planning requires at least predictable traffic volumes and traffic composition within the planning horizon On the other hand airline route networks are increasingly dynamic structures that frequently show discontinuous changes As a consequence the much more volatile airport traffic restricts the value of detailed traffic forecasts Volatility of airport traffic and its composition requires flexibility of airport strategies and planning processes The book explores this dilemma through a detailed study of airline network development airport connectivity and airport planning in the deregulated EU air transport market The questions the book seeks to answer are how have airlines responded to the regime changes in EU aviation with respect to the configuration of their route networks what has been the impact of the reconfiguration of airline network configurations for the connectivity of EU airports how can airport planners and airport authorities deal with the increasingly uncertain airline network behaviour in Europe

Underwater Robots Junku Yuh,Tamaki Ura,George A. Bekey,2012-12-06 All life came from sea but all robots were born on land The vast majority of both industrial and mobile robots operate on land since the technology to allow them to operate in and under the ocean has only become available in recent years A number of complex issues due to the unstructured hazardous undersea environment makes it difficult to travel in the ocean while today s technologies allow humans to land on the moon and robots to travel to Mars Clearly the obstacles to allowing robots to operate in a saline aqueous and pressurized environment are formidable Mobile robots operating on land work under nearly constant atmospheric pressure their legs or wheels or tracks can operate on a firm footing their bearings are not subjected to moisture and corrosion they can use simple visual sensing and be observed by their creators working in simple environments In contrast consider the environment where undersea robots must operate The pressure they are subjected to can be enormous thus requiring extremely rugged designs The deep oceans range between 19 000 to 36 000 ft At a mere 33 foot depth the pressure will be twice the normal one atmosphere pressure of 29 4 psi The chemical environment of the sea is highly corrosive thus requiring the use of special materials Lubrication of moving parts in water is also difficult and may require special sealed waterproof joints

Well-run project meetings allow teams to get through the maze of distractions and obstacles to achieve results. Unfortunately, many project meetings aren't well-run; they are viewed by team members as unproductive, tedious wastes of precious time. But you can change that. The Project Meeting Facilitator contains practical techniques and practices that will help you facilitate our meetings more effectively, transforming them into well-planned, well-managed journeys that engage the team while achieving the intended goals.

Planning and Place in the City Marichela Sepe, 2013-03-05 Under the influence of globalization, the centres of many cities in the industrialised world are losing their place identity: the set of cultural markers that define a city's uniqueness and make it instantly recognisable. A key task for planners and residents working together is to preserve that unique sense of place without making the city a parody of itself. In *Planning and Place in the City*, Marichela Sepe explores the preservation, reconstruction, and enhancement of cultural heritage and place identity. She outlines the history of the concept of placemaking and sets out the range of different methods of analysis and assessment that are used to help pin down the nature of place identity. This book also uses the author's own survey-based method called PlaceMaker to detect elements that do not feature in traditional mapping and identifies appropriate planning interventions. Case studies investigate cities in Europe, North America, and Asia which demonstrate how surveys and interviews can be used to draw up an analytical map of place identity. This investigative work is a crucial step in identifying cultural elements which will influence what planning decisions should be taken in the future. The maps aim to establish a dialogue with local residents and support planners and administrators in making sustainable changes. The case studies are amply illustrated with survey data sheets, photos, and coloured maps. Innovative and broad-based *Planning and Place in the City* lays out an approach to the identification and preservation of place and cultural heritage suitable for students, academics, and professionals alike.
