The Fast and The Furious: Drivers, Speed Cameras and Control in a Risk Society Dr Helen Wells, 2012-10-01 The Fast and The Furious Drivers Speed Cameras and Control in a Risk Society presents a sociological and criminological perspective critical to understanding the driver's role at the centre of road safety interventions Such an approach is it is argued as crucial to an understanding of attempts to reduce road crashes deaths and injuries as approaching such questions from an engineering or educational perspective The book offers an explanation for the continued debate about one road safety intervention the speed camera by situating that debate within contemporary literature about the risk society Beck 1992 and more broadly understood experiences of risk faced on a daily basis by drivers Rather than a focus on risk as something that can be objectively assessed measured and managed separately from the social context in which it is encountered it suggests that risk is something that permeates this particular debate from every angle The book achieves its aims by utilising sociological and criminological perspectives to investigate issues such as the social context in which it is possible for drivers to reject official scientific expertise about crash causation and camera effectiveness the self defined respectability of the population being problematised and its juxtaposition with a proper police focus on real criminals the reconceptualisation of law breaking as risk taking rather than inherently wrong behaviour and its consequences for the enforcement of laws based on risk assessment the experience of being controlled by technology and of receiving what is essentially automated justice These and other issues are explored and suggested as illuminating of both the real concerns underpinning this debate and potentially instructive for future attempts to control risky behaviour both within and beyond a road safety context

Peter Rothe, 2020-03-12 By the turn of the century the elderly will

comprise about 20 percent of the population in North America and 28 percent of those who drive. Place this percentage in high powered automobiles and the need for planning and policy development becomes evident. Most standard research on elderly drivers has not gone beyond gathering data on specific situations or characteristics. This book rises beyond simple statistical presentation. It blends sociological insight with statistical detail to produce an absorbing description of the elderly drivers' daily lives, driving styles, experiences with accident and injury, social relationships and life aspirations. It also describes areas of neglect, imagined and real health problems, driving exposure and traffic violations, accidents and loss of self esteem. It presents in depth accounts of the trauma of loss of license and the importance of the automobile for sustaining mental, physical and social well being. The self imposed or self defined rules elderly drivers use to navigate traffic or compensate for physical frailties are described in depth. The Safety of Elderly Drivers includes penetrating comments from elderly drivers who have been involved in serious accidents and from random elderly drivers speaking for their generation of drivers. Integrating statistical findings based on Motor Vehicle Department accident data and survey data with comprehensive interviews and discussions with elderly drivers, the book provides an empirically grounded in depth view of the elderly driver today. Rothe summarizes theories and models of aging along with past research on elderly drivers projecting what the future may hold. If present trends in medicine, housing, politics, migration and mass transit continue, it closes with a series of recommendations for future traffic planning. This book will be of interest to policymakers concerned with traffic safety as well as social scientists and others interested in gerontological issues.
