Human Mobility, Spatiotemporal Context, and Environmental Health: Recent Advances in Approaches and Methods
Mei-Po Kwan, 2019-07-12 Environmental health researchers have long used concepts like the neighborhood effect to assessing people's exposure to environmental influences and the associated health impact However these are static notions that ignore people's daily mobility at various spatial and temporal scales e.g daily travel migratory movements and movements over the life course and the influence of neighborhood contexts outside their residential neighborhoods Recent studies have started to incorporate human mobility non residential neighborhoods and the temporality of exposures through collecting and using data from GPS accelerometers mobile phones various types of sensors and social media Innovative approaches and methods have been developed This Special Issue aims to showcase studies that use new approaches methods and data to examine the role of human mobility and non residential contexts on human health behaviors and outcomes It includes 21 articles that cover a wide range of topics including individual exposure to air pollution exposure and access to green spaces spatial access to healthcare services environmental influences on physical activity food environmental and diet behavior exposure to noise and its impact on mental health and broader methodological issues such as the uncertain geographic context problem UGCoP and the neighborhood effect averaging problem NEAP This collection will be a valuable reference for scholars and students interested in recent advances in the concepts and methods in environmental health and health geography **Human Interface and the Management of Information. Star Lake, Bisti Regional Coal Right-of-way ,1979 **Laser Scanning Systems in Highway and Safety Assessment** Biswajeet Pradhan,Maher Ibrahim Sameen,2019-04-02 This book aims to promote the core understanding of a proper modelling of road traffic accidents by deep learning methods using traffic information and road geometry delineated from laser scanning data The first two chapters of the book introduce the reader to laser scanning technology with creative explanation and graphical

illustrations review and recent methods of extracting geometric road parameters The next three chapters present different machine learning and statistical techniques applied to extract road geometry information from laser scanning data Chapters 6 and 7 present methods for modelling roadside features and automatic road geometry identification in vector data After that this book goes on reviewing methods used for road traffic accident modelling including accident frequency and injury severity of the traffic accident Chapter 8 Then the next chapter explores the details of neural networks and their performance in predicting the traffic accidents along with a comparison with common data mining models Chapter 10 presents a novel hybrid model combining extreme gradient boosting and deep neural networks for predicting injury severity of road traffic accidents This chapter is followed by deep learning applications in modelling accident data using feed forward convolutional recurrent neural network models Chapter 11 The final chapter Chapter 12 presents a procedure for modelling traffic accident with little data based on the concept of transfer learning This book aims to help graduate students professionals decision makers and road planners in developing better traffic accident prediction models using advanced neural networks

Understanding the Construction Client David Boyd,Ezekiel Chinyio,2008-04-15 This book breaks new ground by creating a framework to understand clients actions and needs Most construction management books focus on improving the construction process this one focuses on a better engagement with the client It challenges conceptions of both the construction industry and clients businesses so that a more effective process and greater client satisfaction can be achieved The book suggests that buildings are not about building but about changing and developing the client The technical organisational and psychological aspects of this are described and analysed in detail so that current experience can be explained and better practice determined The book offers well researched information about clients in a number of sectors developers supermarkets NHS government airports and housing associations which will help you understand what these client s business or service needs are and how construction fits into this It demonstrates how to develop an appreciation of the client s perspective with a toolkit for ensuring successful client engagement This makes Understanding the Construction Client a user friendly and practical guide as well as significant text for academia

Approaches to Geo-mathematical Modelling Alan G. Wilson,2016-08-26 Geo mathematical modelling models from complexity science Sir Alan Wilson Centre for Advanced Spatial Analysis University College London Mathematical and computer models for a complexity science tool kit Geographical systems are characterised by locations activities at locations interactions between them and the infrastructures that carry these activities and flows They can be described at a great variety of scales from individuals and organisations to countries Our understanding often partial of these entities and in many cases this understanding is represented in theories and associated mathematical models In this book the main examples are models that represent elements of the global system covering such topics as trade migration security and development aid together with examples at finer scales This provides an effective toolkit that can not only be applied to global systems but more widely in the modelling of complex systems All

complex systems involve nonlinearities involving path dependence and the possibility of phase changes and this makes the mathematical aspects particularly interesting It is through these mechanisms that new structures can be seen to emerge and hence the current notion of emergent behaviour The range of models demonstrated include account based models and biproportional fitting structural dynamics space time statistical analysis real time response models Lotka Volterra models representing war agent based models epidemiology and reaction diffusion approaches game theory network models and finally integrated models Geo mathematical modelling Presents mathematical models with spatial dimensions Provides representations of path dependence and phase changes Illustrates complexity science using models of trade migration security and development aid Demonstrates how generic models from the complexity science tool kit can each be applied in a variety of situations This book is for practitioners and researchers in applied mathematics geography economics and interdisciplinary fields such as regional science and complexity science It can also be used as the basis of a modelling course for postgraduate students
