*Pharmacy Practice* Mr. Sri Venkatesh Uriti,Mr. Venkateswarlu Garla, Miss Pratiksha P. performing the test close to the patient and the speed at which test results can be obtained compared to sending a sample to a laboratory and waiting for results to be returned. Thus a series of clinical applications are possible that can shorten the time for clinical decision making about additional testing or therapy as delays are no longer caused by preparation of clinical samples transport and central laboratory analysis. Tests in a POC format can now be found for many medical disciplines including endocrinology diabetes cardiology nephrology critical care fertility hematology coagulation infectious disease and microbiology and general health screening. Point of care testing POCT enables health care personnel to perform clinical laboratory testing near the patient. The idea of conventional and POCT laboratory services presiding within a hospital seems contradictory yet they are in fact complementary together. POCT and central laboratory are important for the optimal functioning of diagnostic processes. They complement each other provided that a dedicated POCT coordination integrates the quality assurance of POCT into the overall quality management system of the central laboratory. The motivation of the third edition of the POCT book from Lippa Junker which is now also available in English is to explore and describe clinically relevant analytical techniques organizational concepts for application and future perspectives of POCT. From descriptions of the opportunities that POCT can provide to the limitations that clinicians must be cautioned about this book provides an overview of the many aspects that challenge those who choose to implement POCT. Technologies clinical applications networking issues and quality regulations are described as well as a survey of future technologies that are on the future horizon. The editors have spent considerable efforts to update the book in general and to highlight the latest developments e.g. novel POCT applications of nucleic acid testing for the rapid identification of infectious agents. Of particular note is also that a cross country comparison of POCT quality rules is being described by a team of international experts in this field.
