DEFINING DIGITAL ETHNOGRAPHY

Ethnography relies greatly on up-close, personal experience. Participation, rather than just observation, is one of the keys to this process (Genzuk., 1999). Traditional ethnographers focus attention on a community, selecting knowledgeable informants who know the activities of the community well (Garson, 2008).

Digital Ethnography is participation and observation on a community in the digital world. Digital ethnographers can participate and observe online films, digital games, blogs, and virtual worlds, to name a few (The Qualitative Report, Stokrocki, 2010).

During this class we focus on digital ethnography in the virtual world of Second Life.

Points Of Viewing Childrens Thinking A Digital Ethnographers Journey:

Points of Viewing Children's Thinking Ricki Goldman-Segall,Ricki Goldman,2014-04-08 This book is about learning and ethnography in the context of technologies Simultaneously it portrays young people s thinking attitudes in computer based learning environments and it describes how the practice of ethnography is changing in a digital world The author likens this form of interaction to the double helix where learning and ethnography are intertwined to tell an emergent story about partnerships with technology Two school computer cultures were videotaped for this study Separated not only by geography one school is on the east coast of New England and the other on the west coast of British Columbia on Vancouver Island they are also separated in other ways ethnic make up and inner city vs rural settings to name only two Yet these two schools are joined by a strong thread a change in their respective cultures with the advent of intensive computer use on the part of the students Both school communities have watched their young people gain literacy and competence and their tools have changed from pen to computer video camera multimedia and the Internet Perhaps most striking is that the way they think of themselves as learners has also changed they see themselves as an active participant in the pilot s seat or director s chair as they chart new connections between diverse and often unpredictable worlds of knowledge *Points of Viewing Children's Thinking* Ricki Goldman-Segall,1998 This eye opening book pieces together three parts of a story understanding media creating ethonographies with digital video and describing children s thinking Readers can become participants by using the website to engage with and add to the stories being told Learning and Instructional Technologies for the 21st Century Leslie Moller,Douglas M. Harvey,2008-12-16 Learning and Instructional Technologies for the 21st Century gathers research which identify models and approaches to improve learning through the inclusion of technology These papers from leading researchers and thinkers in instructional technology begin by refuting the idea that education can be improved through more or better technology Instead the contributors emphasize specific research based ideas which re evaluate learning reorganize schools redirect technology and provide instruction Acknowledging the critical role of technology these contributions explore technology s main advantage its ability to enable advanced learning designs and emerging paradigms as well as to evolve learning interactions While each paper explores a specific aspect of the role of technology the collection shares this common theme Without sufficient consideration to the process of learning and its many facets technological availability alone will not provide a sustained impact on the educational process Originating from the first AECT Research Symposium Learning and Instructional Technologies for the 21st Century will be of interest to researchers and practitioners alike Learning Together Online Starr Roxanne Hiltz,Ricki Goldman,2004-09-22 This book is about the past and future of research on the effectiveness of learning networks also known as e learning or online learning or Web based learning Learning networks are groups of people using computer technology communicating and collaborating online to build knowledge together Over the past decade there has been an explosion not only of online courses but also of studies on them

In Learning Together Online Research on Asynchronous Learning Networks leading researchers in the field use an integrated theoretical framework which they call Online Interaction Learning Theory to organize what past research shows and where future research is going It models the variables and processes that are important in determining the relative effectiveness of online learners working to reach a deeper level of understanding by interacting with each other and with the texts under investigation Now that there have been hundreds of studies and thousands of courses offered online what does the empirical evidence show This book addresses the question directly by presenting what is known from research results about how to design and teach courses effectively online ranging from the organizational context and characteristics of students to learning theories and research design methods It also provides a research agenda for the next decade Learning Together Online Research on Asynchronous Learning Networks is both a textbook for graduate students and a professional reference for faculty teaching online researchers conducting studies and graduate students taking courses about learning technologies who need to know the state of the art of research in the area of online learning   Technologies of Knowing John Willinsky,2000-02-15 In this age of ever more powerful computers our ability to collect and spread knowledge is growing at an exponential rate Far from liberating humanity our information exasperation as John Willinsky describes it in this pathbreaking book has made our ability to reach conclusions about the world around us all the more difficult With little order to guide us through the mountains of new information in the Internet the public as well the sciences that have amassed such knowledge has little confidence in its potential to change the world for the better For example the overload of conflicting new findings in breast cancer research has so paralyzed progress that some researchers now recommend that women stop examining themselves to avoid the psychological burden of monthly searches for this deadly disease While some critics have condemned computers and the Internet for putting us in this age of overflow and still others have praised them for their own sake Willinsky takes a middle ground Using the fictitious Automata Data Corporation as the vehicle for an ingenious thought experiment he plays out what would happen if all information collected from social science research were centralized catalogued and processed by one company serving the public interest Willinsky describes in great detail how such an entity could work to fulfill the promises of the human sciences and technology Sure to stir debate Technologies of Knowing offers a starting point from which to rethink our understanding of our emerging wired world and adds new insight into how to make the uses of knowledge more democratic   **Social Computing: Concepts, Methodologies, Tools, and Applications** Dasgupta, Subhasish,2009-11-30 Uncovers the growing and expanding phenomenon of human behavior social constructs and communication in online environments   **The Impact of Pen and Touch Technology on Education** Tracy Hammond,Stephanie Valentine,Aaron Adler,Mark Payton,2015-07-09 This book presents perspectives for and by teachers school and university administrators and educational researchers regarding the great impact pen and tablet technology can have on classrooms and education presents three distinctly valuable threads of research Emerging

technologies and cutting edge software invented by researchers and evaluated through real classroom deployments First hand perspectives of instructors and administrators who actively implement pen or tablet technologies in their classrooms Up and coming systems that provide insight into the future of pen touch and sketch recognition technologies in the classrooms and the curriculums of tomorrow The Impact of Pen and Touch Technology on Education is an essential read for educators who wish get to grips with ink based computing and bring their teaching methods into the twenty first century as well as for researchers in the areas of education human computer interaction and intelligent systems for pedagogical advancement **Pragmatic Approach to Qualitative Case Study Research Learning by Doing: A Case of Distance Learning Research in Malaysia (UUM Press)** Hisham Dzakiria,2008-01-01 This book for anyone who wants to undertake an engaging satisfying productive and a more successful career as a qualitative researcher This book is intended to contribute to the popularisation of qualitative research in Malaysia Qualitative studies in educational research are very limited in many countries and to date there has been very little work done using this form of educational inquiry in Malaysia The dominant tradition has followed the positivist paradigm A qualitative case study offers a different approach and generates a range of information of different qualities from that obtained using traditional approaches This book provides both the theories and practical practices to undertake a qualitative study The conception of this book began from the assumption that our world is interpreted through language as means of communication and understanding Writing narratives of experience is becoming a common way of describing how people make sense of their experience or problems at hand At the root of the naturalistic inquiry exhibited in this book is an interest in understanding the experience of learners and the meanings they make of the distance learning experience at Universiti Utara Malaysia UUM This study was designed as a single case focusing on distance learners of different backgrounds in UUM **Falling for Science** Sherry Turkle,2008 Passion for objects and love for science scientists and students reflect on how objects fired their scientific imaginations

Handbook of Research on New Media Literacy at the K-12 Level: Issues and Challenges Tan Wee Hin, Leo,Subramaniam, R.,2009-05-31 Provides comprehensive articles on significant issues methods and theories currently combining the studies of technology and literacy New Science of Learning Myint Swe Khine,Issa M. Saleh,2010-06-16 The earliest educational software simply transferred print material from the page to the monitor Since then the Internet and other digital media have brought students an ever expanding low cost knowledge base and the opportunity to interact with minds around the globe while running the risk of shortening their attention spans isolating them from interpersonal contact and subjecting them to information overload The New Science of Learning Cognition Computers and Collaboration in Education deftly explores the multiple relationships found among these critical elements in students increasingly complex and multi paced educational experience Starting with instructors insights into the cognitive effects of digital media a diverse range of viewpoints with little consensus this cutting edge resource acknowledges the double edged potential inherent in computer based education

and its role in shaping students thinking capabilities Accordingly the emphasis is on strategies that maximize the strengths and compensate for the negative aspects of digital learning including Group cognition as a foundation for learning Metacognitive control of learning and remembering Higher education course development using open education resources Designing a technology oriented teacher professional development model Supporting student collaboration with digital video tools Teaching and learning through social annotation practices The New Science of Learning Cognition Computers and Collaboration in Education brings emerging challenges and innovative ideas into sharp focus for researchers in educational psychology instructional design education technologies and the learning sciences **Upon What Does the Turtle Stand?** Aharon Aviram,Janice Richardson,2006-03-06 This book brings together the reflections of independent researchers from around the world Sixteen authors from fourteen countries present their views on the use of information and communication technology ICT in education offering valuable insights through the examination of current issues relevant to the future of education What will education be in tomorrow s world How can ICT be used without rendering education a purely technical process How can we succeed the renovation of educational subjects without transforming them into technical objects The introductory chapter of this publication guides us into the essays through a classification organized by the editors to illustrate different attitudes to technologies The Globalizers see the integration of ICT and education as a means of enhancing the competitiveness of their society in a global economy The Reformists see it as a means of bringing about significant change in didactics in the various disciplines and even in the basics of education The Humanists consider technologies as possible catalysts for changing the aims and values of education from learni oriented to humanistic The Heretic sees values and aims as being determined exclusively by technology and economy and culture as s products of the technology guided process He therefore does not see any sense in interrogations as to which aims should guide us in integrating technology with education Obviously some arguments stretch across all four categories without completely matching any so called type Video Research in the Learning Sciences Ricki Goldman,Roy Pea,Brigid Barron,Sharon J. Derry,2014-05-01 Video Research in the Learning Sciences is a comprehensive exploration of key theoretical methodological and technological advances concerning uses of digital video as data in the learning sciences as a way of knowing about learning teaching and educational processes The aim of the contributors a community of scholars using video in their own work is to help usher in video scholarship and supportive technologies and to mentor video scholars so that video research will meet its maximum potential to contribute to the growing knowledge base about teaching and learning This volume contributes deeply to both to the science of learning through in depth video studies of human interaction in learning environments whether classrooms or other contexts and to the uses of video for creating descriptive explanatory or expository accounts of learning and teaching It is designed around four themes each with a cornerstone chapter that introduces and synthesizes the cluster of chapters related to it Theoretical frameworks for video research Video research on

Morrell,Kate Popejoy,2014-11-04 We are all familiar with the expression teachers bag of tricks It is fairly easy for K 12 teachers to do a quick web search scan library shelves and browse through journals to provide them with numerous lessons and ideas to keep their bags filled Science teacher educators need to not only provide preservice teachers with resources to help them fill their bags but also include crucial theory and pedagogy what constitutes minds on lessons not merely hands on activities But where do we science methods instructors find ideas to put in our bag of tricks to help us with the pedagogy we teach and model These kinds of teaching ideas are not so easy to find using the internet or even science methods textbooks This book is a collection of some favorite teaching ideas from science teacher educators from across the United States and abroad This book is NOT a collection of teaching ideas about specific science content This book IS a set of activities that help us prepare our preservice science teachers in the areas of Constructivism Conceptual Change Nature of Science Integration including Technology Integration Scientific Inquiry Engineering Design and Diversity Differentiation Each section starts with a brief overview of the topic and an introduction to the activities included on the theme The individual activities include step by step instructions modifications extensions references and additional readings to help you easily and fully implement the idea in your own classroom These ideas are a few of our favorites we hope they will become some of yours as well   The Cambridge Handbook of the Learning Sciences R. Keith Sawyer,2014-11-17 The interdisciplinary field of the learning sciences encompasses educational psychology cognitive science computer science and anthropology among other disciplines The Cambridge Handbook of the Learning Sciences is the definitive introduction to this

innovative approach to teaching learning and educational technology This dramatically revised second edition incorporates the latest research in the field includes twenty new chapters on emerging areas of interest and features contributors who reflect the increasingly international nature of the learning sciences The authors address the best ways to design educational software prepare effective teachers organize classrooms and use the internet to enhance student learning They illustrate the importance of creating productive learning environments both inside and outside school including after school clubs libraries museums and online learning environments Accessible and engaging the Handbook has proven to be an essential resource for graduate students researchers teachers administrators consultants educational technology designers and policy makers on a global scale   *Computing and Educational Studies* Eugene F. Provenzo, Jr.,2014-05-01 This special issue calls for a greater awareness of computing as a critical area of study for those interested in educational studies Its purpose is to open up a wider dialogue about computing and education than has previously existed in the field The questions raised provide the basis for a lively discussion and analysis of the role of educational studies in interpreting the role of computing in our culture and educational system This issue also provides a model for exploring other topics of similar significance and importance to the field in future issues of the journal   **Handbook of Complementary Methods in Education Research** Judith L. Green,Judith Green,Gregory Camilli,Patricia B. Elmore,Patricia Elmore,2012-01-04 Published for the American Educational Research Association by Routledge The Handbook of Complementary Methods in Education Research is a successor volume to AERA s earlier and highly acclaimed editions of Complementary Methods for Research in Education More than any book to date including its predecessors this new volume brings together the wide range of research methods used to study education and makes the logic of inquiry for each method clear and accessible Each method is described in detail including its history its research design the questions that it addresses ways of using the method and ways of analyzing and reporting outcomes Key features of this indispensable book include the following Foundations Section Part I is unique among research books Its three chapters examine common philosophical epistemological and ethical issues facing researchers from all traditions and frames ways of understanding the similarities and differences among traditions Together they provide a tripartite lens through which to view and compare all research methods Comprehensive Coverage Part II the heart of the book presents 35 chapters on research design and analysis Each chapter includes a brief historical overview of the research tradition examines the questions that it addresses and presents an example of how the approach can be used Programs of Research Part III examines how research programs connected to eight specific lines of inquiry have evolved over time These chapters examine phenomena such as classroom interaction language research issues of race culture and difference policy analysis program evaluation student learning and teacher education Complementary Methods As the title suggests a central mission of this book is to explore the compatibility of different research methods Which methods can be productively brought together and for what purposes How and on what scale can they be made compatible and what phenomena are they best suited to explore

Flexibility The chapters in Parts II and III are largely independent Therefore selected portions of the book can be used in courses devoted to specific research methods and perspectives or to particular areas of education Likewise established researchers interested in acquiring new techniques or greater expertise in a given methodology will find this an indispensable reference volume This handbook is appropriate for any of the following audiences faculty teaching and graduate students studying education research education researchers and other scholars seeking an accessible overview of state of the art knowledge about specific methods policy analysts and other professionals needing to better understand research methods and academic and research libraries serving these audiences **Making the Transition to E-Learning: Strategies and Issues** Bullen, Mark,Janes, Diane,2006-09-30 Higher education institutions around the world are increasingly turning to e learning as a way of dealing with growing and changing student populations Education for the knowledge society means new skills and knowledge are needed and it means that lifelong learning has become a necessity Higher education institutions are looking to e learning to provide convenient and flexible access to high quality education and training that is needed to meet these emerging demands As they implement e learning however institutions are struggling with the many pedagogical organizational and technological issues Making the Transition to E learning Strategies and Issues provides insights and experiences from e learning experts from around the world It addresses the institutional pedagogical and technological issues that higher education institutions are grappling with as they move from conventional face to face teaching to e learning in its diverse forms Years of Conflict Jason Hart,2008-09-01 Recent years have witnessed a significant growth of interest in the consequences of political violence and displacement for the young However when speaking of children commentators have often taken the situation of those in early and middle childhood as representative of all young people under eighteen years of age As a consequence the specific situation of adolescents negotiating the processes of transition towards social adulthood amidst conditions of violence and displacement is commonly overlooked Years of Conflict provides a much needed corrective Drawing upon perspectives from anthropology psychology and media studies as well as the insights of those involved in programmatic interventions it describes and analyses the experiences of older children facing the challenges of daily life in settings of conflict post conflict and refuge Several authors also reflect upon methodological issues in pursuing research with young people in such settings The accounts span the globe taking in Liberia Afghanistan South Africa Peru Jordan UK Western Europe Eastern Africa Iran USA and Colombia This book will be invaluable to those seeking a fuller understanding of conflict and displacement and its effects upon adolescents It will also be welcomed by practitioners concerned to develop more effective ways of providing support to this group
