Polar Oceans:

Polar Oceans Bobbie Kalman, Molly Aloian, 2003 Despite the extreme climates of the North and South Poles an amazing diversity of wildlife thrive there Young readers will be amazed by the differences between Arctic and Antarctic waters how they connect to other seas how creatures adapt food chains and webs permanent ice and the global consequences of environmental changes

Polar Oceans from Space Josefino Comiso, 2010-03-24 Only a few centuries ago we knew very little about our planet Earth The Earth was considered flat by many although it was postulated by a few like Aristotle that it is spherical based on observations that included the study of lunar eclipses Much later Christopher Columbus successfully sailed to the West to discover the New World and Ferdinand Magellan's ship circumnavigated the globe to prove once and for all that the Earth is indeed a sphere Worldwide navigation and explorations that followed made it clear that the Earth is huge and rather impossible to study solely by foot or by water The advent of air travel made it a lot easier to do exploratory studies and enabled the mapping of the boundaries of continents and the oceans But aircraft coverage was limited and it was not until the satellite era that full coverage of the Earth's surface became available Many of the early satellites were research satellites and that meant in part the development of engineering measurement systems with no definite applications in mind The Nimbus 5 Electrically Scanning Microwave Radiometer ESMR was a classic case in point The sensor was built with the idea that it may be useful for meteorological research and especially rainfall studies over the oceans but success in this area of study was very limited

The Law of the Sea and Polar Maritime Delimitation and Jurisdiction Alex G. Oude Elferink,Donald R. Rothwell,2021-10-18 The climate and other characteristics of the polar regions have been major factors in shaping the legal regime applicable to the polar oceans In Antarctica states have had to grapple with the question of how to account for developments in the law of the sea while preserving the compromise over sovereignty contained in the Antarctic Treaty The Arctic also has presented challenges for the law of the sea as illustrated by the continued attention given to special rules for polar shipping The 1982 United Nations Convention on the Law of the Sea has led to substantial agreement on the legal regime of ocean spaces The present volume explores the impact the Convention has had on the polar regions in this respect including after its entry into force in 1994 To this end it looks at a number of issue areas in the field of maritime delimitation baselines maritime zones delimitation of maritime zones between neighboring

states and jurisdiction environmental protection navigation and fisheries from a bipolar perspective It is strongly suggested that the legal regime of the polar oceans will be further elaborated to more effectively deal with existing activities or to accommodate new activities It is likely that the United Nations Convention on the Law of the Sea will continue to provide the basic legal framework for this exercise and that states will be careful not to unravel the delicate balance contained in it

Changing Arctic Ocean Roxana Sührling, Christian März, Penelope Lindeque, Kirsty Crocket, 2021-05-25 The Arctic is the most northern part of our Earth It is a huge area that spans over several countries including Canada Denmark Greenland Finland Iceland Norway Sweden Russia and the USA However the largest part of the Arctic is not on land but is covered by water the Arctic Ocean For hundreds of thousands of years large parts of the Arctic Ocean were covered by ice all year around Many animals such as polar bears Arctic foxes seals fish and birds and even some people have made this icy place their home They have learned to live with the ice and some animals even need it to live But recently things in the Arctic have been changing You have probably already heard a lot about Climate Change Climate Change impacts the long term weather climate everywhere on our planet Many areas get warmer some get colder and everywhere we see more extreme or unusual weather such as storms floods or droughts But nowhere is Climate Change happening as fast as in the Arctic You might have also heard about the 2 C goal This is a goal that many governments around the world have agreed to The plan is essentially to make sure the average global warming of our atmosphere stays at less than 2 C compared to what people like to call pre industrial time the year 1948 is used as a reference Right now most of the world is at around 0.8 C warming In the Arctic we are already at 2.3 C warming that is 0.3 C above what should be the absolute maximum according to the 2 C goal Now you probably ask why it is so bad that the Arctic is getting a bit warmer That should make it a nicer place to live right Unfortunately the warm temperature means that the ice that has covered the Arctic Ocean for all this time is melting It looks like that will change the Arctic Ocean forever and with it the animals and people that call the Arctic their home In this collection we want to tell you what we as scientists know about the changes in the Arctic how we investigate these changes and what we have learned from our travels to the Arctic and the analyses we do in our research institutes We will tell you about how the higher temperatures in the Arctic change the ice How very tiny animals can have a huge impact We want to introduce you to life in the ice under the ice and at the seafloor We will talk about processes that make the Arctic Ocean so special and chemicals that can travel from our homes and cities all the way to the Arctic

Opportunities and Priorities in Arctic Geoscience National Research Council, Division on Earth and Life Studies, Commission on Geosciences, Environment and Resources, Committee on Arctic Solid-Earth Geosciences, 1991-02-01 There is broad agreement in the scientific community that the solid earth beneath the Arctic Ocean basin contains answers to major unsolved problems in the earth sciences and that many of these pertain to questions that are of global scientific significance or pressing societal concern Recent political

and technological developments including the end of the Cold War and the prospective availability of nuclear submarines and powerful icebreakers for use as research platforms appear to provide remedies for formidable obstacles of communication and access in harsh environmental conditions This book recommends that the Arctic Ocean basin and its margins be the focus of a research program in three stages of study based on selected criteria geologic framework and tectonic evolution the sedimentary record and environmental history and arctic geologic processes and environmental indicators
