Political Attitudes Camelia Florela Voinea, 2016-06-13 Political Science has traditionally employed empirical research and analytical resources to understand explain and predict political phenomena One of the long standing criticisms against empirical modeling targets the static perspective provided by the model invariant paradigm In political science research this issue has a particular relevance since political phenomena prove sophisticated degrees of context dependency whose complexity could be hardly captured by traditional approaches To cope with the complexity challenge a new modeling paradigm was needed This book is concerned with this challenge Moreover the book

aims to reveal the power of computational modeling of political attitudes to reinforce the political methodology in facing two fundamental challenges political culture modeling and polity modeling The book argues that an artificial polity model as a powerful research instrument could hardly be effective without the political attitude and by extension the political culture computational and simulation modeling theory experiments and practice This book Summarizes the state of the art in computational modeling of political attitudes with illustrations and examples featured throughout Explores the different approaches to computational modeling and how the complexity requirements of political science should determine the direction of research and evaluation methods Addresses the newly emerging discipline of computational political science Discusses modeling paradigms agent based modeling and simulation and complexity based modeling Discusses model classes in the fundamental areas of voting behavior and decision making collective action ideology and partisanship emergence of social uprisings and civil conflict international relations allocation of public resources polity and institutional function operation development and reform political attitude formation and change in democratic societies This book is ideal for students who need a conceptual and operational description of the political attitude computational modeling phases goals and outcomes in order to understand how political attitudes could be computationally modeled and simulated Researchers Governmental and international policy experts will also benefit from this book

**Civic Education in the Twenty-First Century** Donald M. Gooch, Michael T. Rogers, 2015-09-18 Imagine an America where politicians governmental institutions schools new technologies and interest groups work together to promote informed engaged citizens Civic Education in the Twenty First Century brings together scholars from various disciplines to show how such a United States is possible today Inspired by Alexis de Tocqueville's analysis of American democracy in the early 1800s this edited volume represents a multidimensional evaluation of civic education in its new and varied forms While some lament a civics crisis in America today Civic Education in the Twenty First Century raises hope that we can have an informed and active citizenry We find the activities of a number of politicians government institutions schools and interest groups as promising developments in the struggle to educate and engage Americans in their democracy New technologies and new innovations in civic education have laid the foundation for a revitalized American civic ecology With Civic Education in the Twenty First Century we call for the United States to make these practices less isolated and more common throughout the country The volume is broken into three major sections First there are four chapters exploring the history and philosophical debates about civic education particularly with respect to its role in America's educational institutions Then the second section provides seven groundbreaking inquiries into how politicians and political institutions can promote civic education and engagement through their routine operations As some examples this section explores how politicians through campaigns and judiciaries through community programs enhance civic knowledge and encourage civic engagement This section also explores how new technologies like the Internet and social media are increasingly used by government institutions and other entities to encourage a more politically informed and engaged citizenry Finally the third section contains six chapters that explore programs and practices in higher education that are enhancing civic education engagement and our knowledge of them From the virtual civics campus of Fort Hayes State to citizens academies throughout the country this section shows the possibilities for schools today to once again be civics actors and promoters

**Muslims, Identity, and American Politics** Brian Calfano, 2018-04-27 Calfano provides an examination of the pressures faced by Muslims often considered political and social outsiders in western nations especially in the United States Identity is a complex concept especially when considering the role that group attachments play in affecting how one sees her his role in the political environment of their country of residence Perhaps the greatest tension in this regard is felt by those who are often considered outsiders in their home country despite significant ties to their nation Though citizens and second generation residents in many cases American Muslims face a combination of suspicion government scrutiny and social segregation in the United States despite significant education and economic assimilation in America The crux of the investigation advanced here centres on how group influence emotions and religious interpretation contribute to the political

orientation and behaviour of a national sample of Muslims living in the American context A compelling explanation as to how members of an ostracized political group marshal the motivation to push through suspicion to become fully engaged political actors this book has wide relevance and will be of interest to scholars researching Muslims and political participation across the fields of political science history sociology and religion
