The Political Implications Of Human Genetic Technology Robert H. Blank, 2019-06-26 Human genetic technology has advanced rapidly in recent years to the point where amniocentesis is commonplace and in vitro fertilization has been successful. On the horizon looms the specter of human cloning and genetic engineering raising a storm of new moral and ethical questions. These questions asserts the author are not the only ones to be considered the impact and role of public policy are equally critical. What part should the state play in human genetic intervention? To what extent does a democratic society have the duty to take steps to reduce genetic disease and improve the quality of life through genetic engineering? If society has such responsibility at what stage does societal good preempt individual rights? What is society's obligation toward future generations and is genetic manipulation justifiable on these grounds? After surveying the state of the art the author grapples with these questions contending that decisions ultimately will not be based on ethical and moral grounds they will be fought out in the political arena.

Science, Technology, And Policy Decisions Anne L. Hiskes, Richard P. Hiskes, 2019-07-09 This text written by a philosopher of science and a political theorist introduces students to the issues and controversies surrounding science and technology policy in the United States. As the impact of technological advancement is increasingly felt the policy making process for science and technology is undergoing a marked transition. The making of this policy is no longer solely the function of government agencies and institutions. New actors in the policy arena are raising questions about the future of technological advancement in the United States and elsewhere and their voices are affecting sometimes obstructing the traditional policy process. This book surveys the entire domain of science and technology policy making with special emphasis on the growing role of citizen participation the ethical issues raised by modern policy problems and the general principles that guide current policy. The authors discuss current philosophical views about the nature of science and technology as social and political entities and also consider the history of the relations between these fields and political authority. They combine an issues and case study approach with a narrative discussion of how ethical participatory and institutional factors have merged in the policy process. Among the topics addressed are nuclear power and siting policy hazardous waste communications technology and biomedical technology. After reviewing the difficult problems facing the modern policy maker the authors assess the methods and ethical assumptions of the current policy making framework and consider alternatives that are more sensitive to the complexity of contemporary policy issues. Intended as a core text for courses in Science Technology and Public Policy the book can also be used in interdisciplinary courses focusing on the relationship between science technology and society. The text is also appropriate for courses in the philosophy of science and technology and for courses in social and political philosophy.

Redefining Human Life Robert H Blank, 2019-08-16 This book examines critical social policy issues emerging from recent developments in human reproductive technology. Although considerable

attention has been focused on the ethical dimensions of these developments the policy dimension has largely been obscured Dr Blank now provides a far ranging overview of the cumulative impact on society of a wide array of new reproductive technologies and the social patterns that accompany or precede their application The book begins with a description of the current context of reproductive decision making Dr Blank demonstrates how emerging technologies are producing complex and intense social policy concerns then reviews in detail human reproductive technologies and illustrates the significant consequences of technological innovations for political and legal concepts of rights and obligations Examples include recent cases involving torts for wrongful life He analyzes possible alterations in the moral and legal status of the fetus in light of apparent technological and social policy trends and presents a paradigm of fetal rights that reflects these changes A final case is made for a comprehensive assessment of reproductive technologies as well as for the urgent need to refine concepts of human life that in the past have been taken for granted but that now are being challenged **Psychology Library**

Editions: Social Psychology Various, 2021-07-09 Psychology Library Editions Social Psychology 30 volume set brings together an eclectic mix of titles from a wealth of authors with diverse backgrounds seeking to understand human behaviour and interaction from a socio psychological perspective The series of previously out of print titles originally published between 1908 and 1993 includes those from some authors considered to be founders of social psychology and traces the development of the subject from its early foundations Social Fabrics of the Mind Michael R.A. Chance, 2015-06-19 Originally published in 1988 this book outlines a new evolutionary paradigm for understanding human society and mental structure originating from the editor's work in primate ethology It is supported and further elaborated by the contributors Chance argues that two modes of social interaction the agonistic and hedonic underlie social life and corresponding mentality In the agonistic mode we are concerned with self security and our attention is much taken up with being accepted by a group This mode is based on a recently discovered state of inhibited braked mental arousal Social behaviour is either authoritarian or authority subservient and has a tendency to control or be controlled It curbs intelligence and restricts personality development In the hedonic mode we are freer to form a network of personal relationships that are typically mutually supportive The hedonic mode leads to the development of self confidence and a relaxed empathic and collaborative personality with intelligence enhanced The volume will still be of interest to all concerned with human affairs including those working in ethology primatology anthropology social psychology psychiatry and political sociology *Biology and Political Science* Robert Blank, Samuel M. Hines Jr., 2002-03-11 This book demonstrates the increasing interest of some social scientists in the theories research and findings of life sciences in building a more interdisciplinary approach to the study of politics It discusses the development of biopolitics as an academic perspective within political science reviews the growing literature in the field and presents a coherent view of biopolitics as a framework for structuring inquiry across the current subfields of political science

Human Rights and Biomedicine George P. Smith II, 2021-08-04 The eight chapters within this volume are structured

around an exploration of the fundamental issues in the field of biomedical human rights dignity and autonomy in not only procreative liberties but throughout the complete cycle of life and death the freedom of scientific inquiry into the new biotechnological methods of collaborative reproduction the right to genetic integrity at birth and throughout life and the equitable right to health or access to health care benefits during life and old age All these central issues are tested of necessity but utilitarian principles which in turn force the templates for decision making evaluate the gravity of harm deriving from a particular human right and its recognition and enforcement measured against the utility of the social economic or cultural good accruing from recognition of such a right in the first instance Ultimately cultural relativism will be seen more often than universality as the determinative point of balance This volume not only informs the ongoing debate on the role of human rights in biomedicine but will also provide enlightened responses to the troublesome issues presented in this new age of biotechnology

Regulating Reproduction Robert H. Blank, 1992-10-16 Examines the social context and current state of reproductive mediating technologies such as artificial insemination in vitro fertilization surrogate motherhood sex preselection DNA probes prenatal diagnosis and sterilization

Genetic Engineering Mark Y. Herring, 2005-12-30 Genetic engineering has quickly become one of the more controversial issues of our time Herring provides a detailed history of the debate in a fair and balanced manner using proponents points of view to make individual cases both pro and con Narrative chapters cover such topics as the Human Genome Project gene splicing cloning genetically altered foods and DNA and crime solving Students and the general public will find a comprehensive survey of the genetic engineering debate Appendices include statements from Robert P George and Peter Singer two of the most prominent scholars on the subject and a bibliography of print and electronic resources for further research

Reproductive Issues in America Janna Merrick, Robert H. Blank, 2003-08-06 A balanced and thoughtful analysis of human reproduction issues in the United States with emphasis on the ethical and policy implications of cutting edge reproductive technologies Few subjects are as divisive and partisan as the issues surrounding the propagation of the human species This thorough examination covers the full scope of the debates and offers an up to the minute survey of the controversial technologies that are at the heart of reproductive rights in the United States The areas explored range from abortion and sterilization to fetal research and human cloning The moral societal and public policy implications of each subject are examined thoroughly with emphasis on those areas where cutting edge technology has raced ahead of public policy thereby creating new concerns for ethicists and policy makers Legislative oversight or the freedom to pursue reproductive technologies at any cost this debate is far from over

Reproductive Tissue Banking Armand M. Karow, John K. Critser, 1997-03-20 Reproductive technologies to assist in both human conception and animal breeding are increasingly in demand These technologies along with the advent of tissue engineering have propelled the challenges of tissue collection preservation and banking to the research forefront Using examples drawn from reproductive technologies Reproductive Tissue Banking presents the scientific principles

underlying tissue banking These examples serve as models for the technology of banking other living tissues including blood bone marrow cornea and skin In discussing research emerging from their laboratories and those of others the authors meld fundamentals of biology chemistry and physics with the latest discoveries in the field to give the reader profound insight into research directions and ethical considerations crucial to the advancement of tissue banking With its emphasis on human applications and concerns this book provides a valuable supplement to short courses on tissue preservation and tissue engineering Researchers in reproductive medicine animal and veterinary science and cryobiology will find this book with its extensive bibliography a very handy reference Written by leading international researchers Provides insightful discussions on reproductive tissue banking Presents comprehensive citations to relevant literature both current and historic Discusses in vitro preservation of spermatozoa oocytes embryos and gonadal tissues of mammals Contains coverage of ethical considerations from a discussion of the splitting of embryos to an exploration of the protection of biodiversity *Politics and the Life Sciences* Robert H. Blank, Samuel M. Hines Jr., Odelia Funke, Joseph Losco, Patrick Stewart, 2014-10-21 This book examines the development of biopolitics as an academic perspective within political science It reviews the work of the leading proponents of this perspective and presents a comprehensive view of biopolitics as a framework to structure political inquiry

Genetics and the Law III Aubrey Milunsky, 2013-11-11 It was the best of times it was the worst of times it was the age of wisdom it was the age of foolishness it was the epoch of belief it was the epoch of incredulity it was the spring of hope it was the winter of despair Charles Dickens *A Tale of Two Cities* Dickens of course did not have the contemporary dilemmas of modern genetics in mind Indeed we need to remind ourselves how short the history of modern genetics really is Recognition that genetic traits are carried by deoxyribonucleic acid DNA occurred only about 40 years ago Knowledge of the three dimensional structure of DNA is only about 30 years old The correct number of human chromosomes was not determined until the mid 1950s and Down syndrome was recognized only in 1959 It was not until in 1968 that the exact location of a gene was determined on an autosomal chromosome and the study of genes rather than their protein products has been possible for barely a decade

Integrated Impact Assessment Frederick Rossini, 2019-03-01 An outgrowth of the recognition that the varieties of impact assessment have much in common and that the common elements are a sound basis for an intellectual framework this book incorporates contributions from leading practitioners of technology environmental and social impact assessment The authors describe integrated impact assessment address

Cloning Human Beings: no distinct title United States. National Bioethics Advisory Commission, 1997 Cultural Conceptions Valerie Hartouni, 1997 Examines the meaning of life in an era of emerging biotechnology What happens to prevailing beliefs about the uniqueness of individual life when life can be cloned Or to traditional understandings of family relationships when a child can have up to five parents These are some of the questions addressed by Valerie Hartouni in her consideration of the cultural effects of new reproductive technologies as reflected in video images popular journalism scientific debates legal briefs and policy decisions

In *Cultural Conceptions* Hartouni tracks the circulation and communication of various myths images and stories pertaining to new reproductive technologies and their effects both imagined and real during the past two decades While addressing topics ranging from surrogacy and cloning to adoption ultrasound imaging and abortion Hartouni looks to American popular culture for clues to what these new and not so new reproductive practices tell us about issues of personhood Hartouni investigates the emergence of new anxieties about the nature of selfhood as well as the recurrence of age old myths regarding individuality sexuality property and family She argues that both are being played out in cultural contests over the meaning and organization of women s reproductive capacity In her discussion of provocative issues such as The Bell Curve controversy and the Baby M case Hartouni traces the dialectic of crisis and containment unleashed by reproductive technologies Ultimately however *Cultural Conceptions* argues that the anxieties that surround new reproductive technologies provide openings for alternative understandings and practices of life to emerge and challenge those currently in place A thoughtful daring and original look at this complex set of issues *Cultural Conceptions* provides an much needed guide to our nation s psyche as we approach the new millennium *The Christian Religion and Biotechnology* George P. Smith, 2005-03-21 Religion is a dominant force in the lives of many Americans It animates challenges directs and shapes as well the legal political and scientific agendas of the new Age of Biotechnology In a very real way religion biomedical technology and law are epistemologically different Yet they are equal vectors of force in defining reality and approaching an understanding of it Indeed all three share a synergetic relationship for they seek to understand and improve the human condition This book strikes a rich balance between thorough analysis in the body anchored in sound references to religion law and medical scientific analysis and a strong scholarly direction in the end notes It presents new insights into the decision making processes of the new Age of Biotechnology and shows how religion law and medical science interact in shaping directing and informing the political processes This volume will be of interest to both scholars and practitioners in the fields of religion and theology philosophy ethics family law science medicine political science and public policy and gender studies It will serve as a reference source and can be used in graduate and undergraduate courses in law medicine and religion
