Quality of life (QoL) is a broad concept that has many definitions and meanings depending on the context under consideration. It can be perceived as the overall enjoyment of life and a multidimensional concept which emphasizes the self-perceptions of an individual's current state of mind, which is affected in a complex way by the person's physical health, psychological state, personal beliefs, social relationships, and their relationship to salient features of their environment. On the other hand, demographic data suggests an increased need for workers worldwide and a rapid aging trend in the active workforce, as well as in general. This trend of workforce deficit and population aging will be even more prominent in the future. Therefore, in order to have and sustain a healthy, motivated, and productive workforce, but also healthy, independent, and active elderly adults, one must improve their QoL, and vice versa. Improving QoL will improve general public health and in turn create communities who can contribute in diverse and positive ways to both promote and sustain health for future generations. **Immigration Act of 1989** United States.
