 radiation facilities of all types safety procedures for protecting radiation workers and the general public must be carefully
 planned and supervised and controlled by a qualified staff member To meet currently accepted standards for protection the
 potential exposures of workers and anyone else in or near a radiation area are evaluated and precautions taken to avert the
 possibility of exceeding or even approaching the permissible radiation levels Radiation workers employed in these facilities
 are informed about these safety procedures However there are various individuals involved in the delivery of medical care or
 in research who are not usually categorized as radiation workers Their duties may occasionally take them into areas where
 radiation or radioactive materials are present For want of a better term we may group many of these individuals under the

title of allied health personnel Among these are physicians nurses technicians and others who are not classified as radiation workers but who occasionally have to deal with radioactive materials or with patients who have received radiopharmaceuticals In addition there are others not directly involved in the care of patients or research who may incidentally be exposed to radiation in the course of their work Such for instance are personnel in institutional shipping and receiving rooms and those engaged in hospital maintenance work Many of these people are concerned about radiation hazards and often suffer misconceptions regarding the subject They sometimes work without instruction or guidance Sometimes they seek out someone to ask questions about radiation and do receive from them careful answers to their questions Too often however they are simply told that everything is all right and that they have no cause to worry One purpose of this report is to note the types of problems encountered and try to give approaches to handling them The Radiation Protection Supervisor is usually aware of potential hazards within an institution but sometimes the problems are not evident even to him From Preface pages iii iv

Clinical Radiotherapy Physics Subramania Jayaraman, Lawrence H. Lanzl, 2011-06-27 This book provides an in depth introduction to radiotherapy physics The emphasis in much of the work is on the clinical aspects of the field Uniquely useful for both the physicist and non physicist Clinical Radiotherapy Physics gradually and sequentially develops each of its topics in clear concise language It includes important mathematical analyses yet is written so that these sections can be skipped if desired without compromising understanding The book is divided into seven parts covering basic physics Parts I II equipment for radiotherapy Part III radiation dosimetry Parts IV V radiation treatment planning Part VI and radiation safety and shielding Part VII For radiation oncologists radiation therapists and clinical physicists *Technical Reports Series*, 1990 **NUREG/CR**. Accelerator Health Physics H. Wade Patterson, 2012-12-02 Accelerator Health Physics tackles the importance of health physics in the field of nuclear physics especially to those involved with the use of particle accelerators The book first explores concepts in nuclear physics such as fundamental particles radiation fields and the responses of the human body to radiation exposure The book then shifts to its intended purpose and discusses the uses of particle accelerators and the radiation they emit the measurement of the radiation fields radiation detectors the history design and application of accelerator shielding and measures in the implementation of a health physics program The text is recommended for health physicists who want to learn more about particle accelerators their effects and how these effects can be prevented The book is also beneficial to physicists whose work involves particle accelerators as the book aims to educate them about the hazards they face in the workplace **Veterans' Claims for Disabilities from Nuclear Weapons Testing** United States.
