Quaternary Extinctions A Prehistoric Revolution:

Quaternary Extinctions Paul S. Martin, Richard G. Klein, 2022-01-04 What caused the extinction of so many animals at or near the end of the Pleistocene Was it overkill by human hunters the result of a major climatic change or was it just a part of some massive evolutionary turnover Questions such as these have plagued scientists for over one hundred years and are still being heatedly debated today Quaternary Extinctions presents the latest and most comprehensive examination of these questions Geological Magazine May be regarded as a kind of standard encyclopedia for Pleistocene vertebrate paleontology for years to come American Scientist Should be read by paleobiologists biologists wildlife managers ecologists archeologists and anyone concerned about the ongoing extinction of plants and animals Science Uncommonly readable and varied for watchers of paleontology and the rise of humankind Scientific American Represents a quantum leap in our knowledge of Pleistocene and Holocene palaeobiology Many volumes on our bookshelves are destined to gather dust rather than attention But not this one Nature Two strong impressions prevail when first looking into this epic compendium One is the judicious balance of views that range over the whole continuum between monocausal cultural or environmental explanations The second is that both the data base and theoretical sophistication of the protagonists in the debate have improved by a quantum leap since 1967 American Anthropologist

Extinctions in Near Time Ross D.E. MacPhee, Hans-Dieter Sues, 2013-11-09 Near time an interval that spans the last 100 000 years or so of earth history qualifies as a remarkable period for many reasons From an anthropocentric point of view the out standing feature of near time is the fact that the evolution cultural diversification and global spread of Homo sapiens have all occurred within it From a wider biological perspective however the hallmark of near time is better conceived of as being one of enduring repeated loss The point is important Despite the sense of uniqueness implicit in phrases like the biodiversity crisis meant to convey the notion that the present bout of extinctions is by far the worst endured in recent times substantial losses have occurred throughout near time In the majority of cases these losses occurred when and only when people began to expand across areas that had never before experienced their presence Although the explanation for these correlations in time and space may seem obvious it is one thing to rhetorically observe that there is a connection between humans and recent extinctions and quite another to demonstrate it scientifically How should this be done Traditionally the study of past extinctions has fallen largely to researchers steeped in such disciplines as paleontology systematics and paleoecology The evaluation of future losses by contrast has lain almost exclusively within the domain of conservation biologists Now more than ever there is opportunity for overlap and sharing of information

Native Americans and the Environment Michael Eugene Harkin, David Rich Lewis, 2007-01-01 Often cited as one of the most decisive campaigns in military history the Seven Days Battles were the first campaign in which Robert E Lee led the Army of Northern Virginia as well as the first in which Lee and Thomas Stonewall Jackson worked together

The Archaeology and Paleoecology of the Aubrey Clovis Site (41DN479) Denton County, Texas

C. Reid Ferring,2001 **Mass Extinctions and Their Aftermath** ,1997-09-11 Why do mass extinctions occur The demise of the dinosaurs has been discussed exhaustively but has never been out into the context of other extinction events This is the first systematic review of the mass extinctions of all organisms plant and animal terrestrial and marine that have occurred in the history of life This includes the major crisis 250 million years ago which nearly wiped out all life on Earth By examining current paleontological geological and sedimentological evidence of environmental changes the cases for explanations based on climate change marine regressions asteroid or comet impact anoxia and volcanic eruptions are all critically evaluated

The Early Settlement of North America Gary Haynes,2002-11-14 The Early Settlement of North America is an examination of the first recognisable culture in the New World the Clovis complex Gary Haynes begins his analysis with a discussion of the archaeology of Clovis fluted points in North America and a review of the history of the research on the topic He presents and evaluates all the evidence that is now available on the artefacts the human populations of the time and the environment and he examines the adaptation of the early human settlers in North America to the simultaneous disappearance of the mammoths and mastodons Haynes offers a compelling re appraisal of our current state of knowledge about the peopling of this continent and provides a significant new contribution to the debate with his own integrated theory of Clovis which incorporates vital new biological ecological behavioural and archaeological data **Ancient Peoples of the**

Great Basin and Colorado Plateau Steven R Simms,2016-07 Written to appeal to professional archaeologists students and the interested public alike this book is a long overdue introduction to the ancient peoples of the Great Basin and northern Colorado Plateau Through detailed syntheses the reader is drawn into the story of the habitation of the Great Basin from the entry of the first Native Americans through the arrival of Europeans Ancient Peoples is a major contribution to Great Basin archaeology and anthropology as well as the general study of foraging societies **Archaeology on the Great Plains** W.

Raymond Wood,1998 This synthesis of Great Plains archaeology brings together what is currently known about the inhabitants of the ancient Plains The essays review the Paleo Indian Archaic Woodland and Plains Village peoples providing information on technology diet settlement and adaptive patterns **Frozen in Time** Michael Oard,2004-11-01 Earth's past is littered with the mysterious and unexplained the pyramids Easter Island Stonehenge dinosaurs and the list goes on and on as science looks for clues to decipher these puzzles One such mystery surrounds the now extinct creature called the woolly mammoth Author and meteorologist Michael Oard has studied the mammoth and its equally mysterious time period the Ice Age for many years and has come to some fascinating conclusions to help lift the fog engulfing the facts Some of the questions he addresses include What would cause the summer temperatures of the northern United States and European to plummet more than 50 degrees Fahrenheit Why did mammoths become extinct across the entire earth at the same time as many other large mammals Why are the mammoth carcasses found generally in standing positions How could large lakes exist in what are today very dry desert like places What was the source of the abnormal of moisture necessary for heavy snow

What caused the cold summer temperatures and heavy snowfall to persist for hundreds of years In logical progression many other Ice Age topics are explained including super Ice Age floods ice cores man in the Ice Age and the number of ice ages This is one of the most difficult eras in geological history for a uniformitarian scientist one who believes the earth evolved by slow processes over millions of years to explain simply because long ages of evolution cannot explain it Provided here are plausible explanations of the seemingly unsolvable mysterious about the Ice Age and the woolly mammoths Frozen in Time

Murray Springs C. Vance Haynes, Bruce B. Huckell, 2022-04-05 The Murray Springs Site in the upper San Pedro River Valley of southeast Arizona is one of the most significant Clovis sites ever found It contained a multiple bison kill a mammoth kill and possibly a horse kill in a deeply stratified sedimentary context Scattered across the buried occupation surface with the bones of late Pleistocene animals were several thousand stone tools and waste flakes from their manufacture and repair Because of the unique occurrence of an algal black mat that buried the Clovis age surface immediately after abandonment the distributional integrity of the artifacts and debitage clusters is exceptional for Paleoindian sites Excavation of the Clovis hunters camp 50 to 150 meters south of the kills revealed artifactual evidence typical of hunting camp activity including hide working and weapons repair Impact flakes conjoining with Clovis points clearly tied the camp to the bison kill The unique nature of the site and this comprehensive study of the excavated material constitute one of the most important contributions to our knowledge of Paleoindian hunters in the New World *The World Environment 1972-1992* O. El-Kholy, 2012-12-06 Our planet is under siege Assaults on the atmosphere the greenhouse effect the depletion of the ozone layer and increasing air pollution pose a still unquantified threat to human life The dumping of hazardous wastes and land based sources of pollution present a similar threat to the oceans On land we are destroying a tropical forest the size of Austria every year and more than a hundred species of wild plants and animals are lost forever each day When the General Assembly of the United Nations established UNEP it charged us with reporting on the changing state of the world s environment tracking the underlying causes of change and working with governments to develop responses to those changes Every year since 1974 UNEP has produced a State of the Environment report focusing on one or more emerging environmental issues and always stressing the human factor the impact of environmental quality on people and society Three times since its inception 1982 1987 and 1992 UNEP has undertaken a more wide ranging study The results of the present study are the most disturbing of the three However not all the signs are negative Throughout the 1970s and into the 1980s UNEP was able to report progress in some important areas Environmental monitoring capacity was being rapidly improved in many parts of the world and Ministries of the Environment were being set up in an attempt to deal with environmental threats in a more coherent way

Environment and Development Stavros G. Pouloupoulos, Vassilis J. Inglezakis, 2016-05-23 Environment and Development Basic Principles Human Activities and Environmental Implications focuses on the adverse impact that human activities developments and economic growth have on both natural and inhabited environments The book presents the

Pyne, 2015-09-14 Pyne traces the impact of fire in Australia from its influence on vegetation to its use by Aborigines and European settlers Mr Pyne showing what a historian deeply schooled in environmental science can contribute to our awareness of nature and culture has produced a provocative work that is a major contribution to the literature of environmental studies New York Times Book Review

Past and Future Rapid Environmental Changes Brian Huntley, Wolfgang Cramer, Alan V. Morgan, Honor C. Prentice, Judy R.M. Allen, 2013-06-29 Numerous experts including ecologists geneticists paleontologists and climatologists investigate the response of terrestrial organisms to changes in their environment The volume comprises an introductory and a final chapter by the editors as well as another 35 contributions These are divided into six sections 1 past environmental changes the late Quaternary 2 spatial responses to past changes 3 mechanisms enabling spatial responses 4 evolutionary responses to past changes 5 mechanisms enabling evolutionary responses 6 predicted future environmental changes and simulated responses The overwhelming and unanimous conclusion of all contributors is that forecasted global environmental changes pose a severe threat to the integrity of ecosystems worldwide and to the survival of at least some species

Meltzer, 2009-05-27 More than 12 000 years ago in one of the greatest triumphs of prehistory humans colonized North America a continent that was then truly a new world Just when and how they did so has been one of the most perplexing and controversial questions in archaeology This dazzling cutting edge synthesis written for a wide audience by an archaeologist who has long been at the center of these debates tells the scientific story of the first Americans where they came from when they arrived and how they met the challenges of moving across the vast unknown landscapes of Ice Age North America David J Meltzer pulls together the latest ideas from archaeology geology linguistics skeletal biology genetics and other fields to trace the breakthroughs that have revolutionized our understanding in recent years Among many other topics he explores disputes over the hemisphere s oldest and most controversial sites and considers how the first Americans coped with changing global climates He also confronts some radical claims that the Americas were colonized from Europe or that a crashing comet obliterated the Pleistocene megafauna Full of entertaining descriptions of on
