Abstract We study cowellpoweredness in the category **QUnif** of quasi-uniform spaces and uniformly continuous maps. A full subcategory \mathcal{A} of **QUnif** is cowellpowered when the cardinality of the codomains of any class of epimorphisms in \mathcal{A} , with a fixed common domain, is bounded. We use closure operators in the sense of Dikranjan–Giuli–Tholen which provide a convenient tool for describing the subcategories \mathcal{A} of **QUnif** and their epimorphisms. Some of the results are obtained by using the knowledge of closure operators, epimorphisms and cowellpoweredness of subcategories of the category **Top** of topological spaces and continuous maps. The transfer is realized by lifting these subcategories along the forgetful functor $T: \mathbf{QUnif} \rightarrow \mathbf{Top}$ and studying when epimorphisms and cowellpoweredness are preserved by the lifting. In other cases closure operators of **QUnif** are used to provide specific results for **QUnif** that have no counterpart in **Top**. This leads to a wealth of cowellpowered categories and a wealth of non-cowellpowered categories of quasi-uniform spaces, in contrast with the current situation in the case of the smaller category **Unif** of uniform spaces, where no example of a non-cowellpowered subcategory is known so far. Finally, we present our

Dedicated to the memory of Sérgio de Ornelas Salbany.

Quasi Uniform Spaces

Quasi Uniform Spaces:

Quasi-Uniform SPates Fletcher, 2018-04-27 Since quasi uniform spaces were defined in 1948 a diverse and widely dispersed literature concerning them has emerged In Quasi Uniform Spaces the authors present a comprehensive study of these structures together with the theory of quasi proximities In addition to new results unavailable elsewhere the volume unites fundamental material heretofore scattered throughout the literature Quasi Uniform Spaces shows by example that these structures provide a natural approach to the study of point set topology It is the only source for many results related to completeness and a primary source for the study of both transitive and quasi metric spaces Included are H Junnila's analogue of Tamano's theorem J Kofner's result showing that every GO space is transitive and R Fox's example of a non quasi metrizable r space In addition to numerous interesting problems mentioned throughout the text 22 formal research problems are featured The book nurtures a radically different viewpoint of topology leading to new insights into purely topological problems Since every topological space admits a quasi uniformity the study of quasi uniform spaces can be seen as no less general than the study of topological spaces For such study Quasi Uniform Spaces is a necessary self contained reference for both researchers and graduate students of general topology Information is made particularly accessible with the inclusion of an extensive index and bibliography

Quasi-uniform Spaces p; lindgren fletcher (wf), 1982 **Some Results on Quasi-uniform Spaces** Karen Sylvia Carter, 1973 The Scale of a Quasi-Uniform Space Olivier Olela Otafudu, 2010-12 We continue our investigations of the scale of a quasi uniform space which we had started in an earlier article We distinguish between the left sided scale and the two sided scale of a quasi uniform space While the behavior of the two sided scale of a quasi uniform space X shows similarities with the usual hyperspace of X equipped with its Hausdorff quasi uniformity the left handed scale generalizes the quasi uniform multifunction space of X into itself For instance the two sided scale of any totally bounded quasi uniform space X is totally bounded while total boundedness of the left sided scale of a quasi uniform space X implies that X is finite or indiscrete Either construction of the scale is based on the idea of the prefilter space of a quasi uniform space Prefilter spaces of quasi uniform spaces are shown to be bicomplete It follows that both the left sided and the two sided scale of a quasi uniform space are bicomplete Indeed these scales can be used to construct the bicompletion of the T_0 reflection of the Hausdorff quasi uniformity of a quasi uniform space *Transitive Quasi-uniform Spaces* Michael Norman Halpin, 1974 **Quasi-uniform Topological Spaces** M. G. Murdeshwar, S. A. Naimpally, 1966 **Uniformization of Quasi-uniform Spaces** Ivan L. Reilly, 1977 **Local Properties of Transitive Quasi-uniform Spaces** Massood Seyedin, 1972 *Functional Analysis in Asymmetric Normed Spaces* Stefan Cobzas, 2012-10-30 An asymmetric norm is a positive definite sublinear functional p on a real vector space X The topology generated by the asymmetric norm p is translation invariant so that the addition is continuous but the asymmetry of the norm implies that the multiplication by scalars is continuous only when restricted to non negative entries in the first argument The asymmetric dual of X meaning

the set of all real valued upper semi continuous linear functionals on X is merely a convex cone in the vector space of all linear functionals on X . In spite of these differences many results from classical functional analysis have their counterparts in the asymmetric case by taking care of the interplay between the asymmetric norm p and its conjugate. Among the positive results one can mention Hahn Banach type theorems and separation results for convex sets, Krein Milman type theorems, analogs of the fundamental principles open mapping, closed graph and uniform boundedness theorems, an analog of the Schauder's theorem on the compactness of the conjugate mapping. Applications are given to best approximation problems and as relevant examples one considers normed lattices equipped with asymmetric norms and spaces of semi Lipschitz functions on quasi metric spaces. Since the basic topological tools come from quasi metric spaces and quasi uniform spaces the first chapter of the book contains a detailed presentation of some basic results from the theory of these spaces. The focus is on results which are most used in functional analysis: completeness, compactness and Baire category which drastically differ from those in metric or uniform spaces. The book is fairly self contained, the prerequisites being the acquaintance with the basic results in topology and functional analysis so it may be used for an introduction to the subject. Since new results in the focus of current research are also included, researchers in the area can use it as a reference text.

Translated from the 1992 Russian edition. Proceedings of a conference held in Zagulba near Baku in October 1987. Papers discuss flows on surfaces, topological characteristics of infinite dimensional mappings and the solvability of nonlinear boundary value problems, combinatorics of a partial fraction decomposition, the theory of spaces of continuous functions and spectral asymptotics of the Laplacian on a fundamental domain in three dimensional hyperbolic space. No index. Annotation copyright by Book News Inc, Portland, OR. Recent Progress in General Topology II M. Husek, J. van Mill, 2002-11-13. The book presents surveys describing recent developments in most of the primary subfields of General Topology and its applications to Algebra and Analysis during the last decade. It follows freely the previous edition, North Holland 1992. Open Problems in Topology, North Holland 1990, and Handbook of Set Theoretic Topology, North Holland 1984. The book was prepared in connection with the Prague Topological Symposium held in 2001. During the last 10 years the focus in General Topology changed and therefore the selection of topics differs slightly from those chosen in 1992. The following areas experienced significant developments: Topological Groups, Function Spaces, Dimension Theory, Hyperspaces, Selections, Geometric Topology including Infinite Dimensional Topology and the Geometry of Banach Spaces. Of course not every important topic could be included in this book. Except surveys the book contains several historical essays written by such eminent topologists as R. D. Anderson, W. W. Comfort, M. Henriksen, S. Mardešić, J. Nagata, M. E. Rudin, J. M. Smirnov. Several reminiscences of L. Vietoris are added. In addition to extensive author and subject indexes, a list of all problems and questions posed in this book are added. List of all authors of surveys: A. Arhangel'skii, J. Baker and K. Kunen, H. Bennett and D. Lutzer, J.

 collection is to guide the non specialist through the basic theory of various generalizations of topology starting with clear
 motivations for their introduction Structures considered include closure spaces convergence spaces proximity spaces quasi

 chapter is self contained and accessible to the graduate student and focuses on motivations to introduce the generalization of

 structures and while kept as a tool rather than an object of study will be used throughout the book For this reason the book
 contains an introductory chapter on categorical topology Canadian Mathematical Bulletin ,1976-03 Handbook of the

 contributions dealing with the life and work of individual topologists with specific schools of topology with research in

 dealing with the various main directions in mathematics where a rather fine subdivision has been used The main
 requirement for these articles has been that they should give a reasonably complete up to date account of the current state of
 affairs in these areas and that they should be maximally accessible On the whole these articles should be understandable to
 mathematics students in their first specialization years to graduates from other mathematical areas and depending on the
 specific subject to specialists in other domains of science engineers and teachers of mathematics These articles treat their
 material at a fairly general level and aim to give an idea of the kind of problems techniques and concepts involved in the area
 in question They also contain background and motivation rather than precise statements of precise theorems with detailed

definitions and technical details on how to carry out proofs and constructions The second kind of article of medium length contains more detailed concrete problems results and techniques Library of Congress Subject Headings Library of Congress,2004 Library of Congress Subject Headings Library of Congress.
