Interaction and the Standardized Survey Interview Hanneke Houtkoop-Steenstra, 2000-08-03 This study investigates in detail the interaction between interviewers and respondents in standardised social survey interviews Applying the techniques of conversation analysis Hanneke Houtkoop Steenstra reveals how certain rules of normal conversation fail to apply in interviews based on a standard questionnaire and offers original empirical evidence to show what really happens Her book demonstrates that interview results can only be understood as products of the contingencies of the interview situation and not as is usually assumed the unmediated expressions of respondents real opinions Her conclusions have important implications for anyone interested in effective survey compilation and interpretation The book is highly accessible setting out the basic tools of conversation analysis simply and clearly and suggesting ways of improving questionnaire design wherever possible Its approach will be of great interest to students and researchers of survey methodology Surveying Memory Processes Daniel B. Wright, George Gaskell, 1998 A special issue of the journal Memory which forms Issue 4 of v 6 1998

addresses data quality sample selection measurement and non response error and new applications for collecting online data The issue of underrepresentation of certain groups in Internet research and the measures most effective at reducing it are also addressed The book concludes with a discussion of the importance of paradata and the Web data collection process in general followed by chapters with innovative experiments using eye tracking techniques and biomarker data This practical book appeals to practitioners from market survey research institutes and researchers in disciplines such as psychology education sociology political science health studies marketing economics and business who use the Internet for data collection but is also an ideal supplement for graduate and or upper level undergraduate courses on Internet research methods and or data collection taught in these fields

Walden, 2002-09-30 Survey research is one of the most widely used research methodologies across the social and behavioral sciences Two trends that have had a major impact on the development of survey methods over the last decade are 1 the application of techniques and theories from cognitive psychology to the understanding and reduction of survey measurement error and 2 the application of new computer and telephony technologies to data collection and analysis These trends and other emerging issues from the 1990 s literature on survey research methods are captured here in 617 detailed annotations to monographs journals government documents dissertations and ERIC documents Annotations include examples from business criminology education health and medicine law library science mass media military science political science psychology sociology social work religion and women s studies The bibliographic entries provide every useful element including series names complete subtitles and overall text page numbers as well as chapter page numbers The extensive annotations are more complete and more detailed than is typical for annotated bibliographies The descriptions include highlights of the study data and sufficient detail to enable the reader to make an informed choice as to whether to seek the full text Appendices include journals cited and the major survey

The Psychology of Survey Response Roger Tourangeau, Lance J. Rips, Kenneth Rasinski, 2000-03-13 This valuable book examines the complex psychological processes involved in answering different types of survey questions Drawing on both classic and modern research from cognitive psychology social psychology and survey methodology the authors examine how survey responses are formulated and they demonstrate how seemingly unimportant features of the survey can affect the answers obtained The book provides a comprehensive review of the sources of response errors in surveys and it offers a coherent theory of the relation between the underlying views of the public and the results of public opinion polls Topics include the comprehension of survey questions the recall of relevant facts and beliefs estimation and inferential processes people use to answer survey questions the sources of the apparent instability of public opinion the difficulties in getting responses into the required format and the distortions introduced into surveys by deliberate misreporting

Silent Voices Adam J. Berinsky, 2013-12-03 Over the past century opinion polls have come to pervade American politics Despite their shortcomings the notion prevails that polls broadly represent public sentiment But do they In *Silent Voices* Adam Berinsky presents a provocative argument that the very process of collecting information on public preferences through surveys may bias our picture of those preferences In particular he focuses on the many respondents who say they don't know when asked for their views on the political issues of the day Using opinion poll data collected over the past forty years Berinsky takes an increasingly technical area of research public opinion and synthesizes recent findings in a coherent and accessible manner while building on this with his own findings He moves from an in depth treatment of how citizens approach the survey interview to a discussion of how individuals come to form and then to express opinions on political matters in the context of such an interview to an examination of public opinion in three broad policy areas race social welfare and war He concludes that don't know responses are often the result of a systematic process that serves to exclude particular interests from the realm of recognized public opinion Thus surveys may then echo the inegalitarian shortcomings of other forms of political participation and even introduce new problems altogether ePro Brian Tiplady, 2016-05-13 Patient self reported data has become increasingly important in today's clinical trials Trials in some disease indications rely upon patient recorded diary data as the primary endpoint to demonstrate drug efficacy including for example indications such as insomnia migraine and pain In addition improvements in quality of life measured using patient questionnaires can now be included as claims on drug labelling Traditionally these data have been collected using paper

questionnaires and diaries issued to subjects Regulators and the industry have become increasingly aware of the limitations of recording patient reported outcomes data on paper including data quality and integrity issues As a result there is a growing interest in collection of patient reported outcomes data using electronic means ePRO Solutions include handheld PDAs Interactive Voice Response IVR systems and other site based hardware such as touchscreen PCs Recently there has been much open debate with the regulators around the use of ePRO in clinical drug submissions US and European agencies have approved new drugs that have included ePRO data in the submission dossier but there are many questions around the adoption of the technology that concern the community These include How should instruments developed on paper be adapted for electronic use and what degree of validation should be done between paper and electronic forms How can researchers ensure they are complying with regulatory requirements including the PRO guidance published by FDA in 2009 when using ePRO solutions Can fewer patients be exposed in a clinical trial as a result of improved data quality obtained using electronic diaries What type of solution should be used for certain patient populations and protocols and how can ePRO solutions be designed optimally to increase patient acceptability and compliance Bill Byrom and Brian Tiplady s ePro addresses all these issues reviews the new FDA guidance and provides a very contemporary view on this important subject
