Informed Decision Making About Prostate-Specific Antigen (PSA) Testing: Findings and Implications from Formative Testing of a Multimodal Intervention Cindy S. Soloe, Lauren A. McCormack, Katherine Treiman, David Driscoll, Shelly Harris, 2009-02-01 We created the You Decide multimodal intervention to provide men with the information skills and reinforcement needed to engage in informed decision making IDM related to prostate cancer screening We developed intervention materials based on three rounds of formative research conducted with 145 members of the intended recipient audience through 10 focus groups and more than 50 individual in depth interviews This report documents key findings from our formative research that may apply to the development of other IDM interventions especially those related to prostate cancer Our findings underscored 1 the difficulty of promoting IDM for cancer screening given people's high affinity for such screenings and 2 the challenge of graphically communicating risk related tradeoffs We found that pretest participants had a preference for full story narratives conveying personal experiences and interpersonal learning opportunities Our formative research findings also supported the need to use plain language to address a range of health literacy levels We describe our efforts to apply these formative research findings in our final intervention materials and discuss implications for future intervention research Our findings underscore the importance of involving the intended audience in the process of developing intervention materials

Aging Men, Masculinities and Modern Medicine Antje Kampf, Barbara L. Questions in Daily Urologic Practice Ryoichi Oyasu, Ximing J. Yang, Osamu Yoshida, 2009-02-21 The principal role of the diagnostic surgical pathologist is to serve a patient by assisting the clinician in charge of the patient's care In that capacity the pathologist provides the vital information that should be directly and indirectly useful in guiding the clinician toward the most appropriate therapy The material pathologists receive most commonly is a biopsy or a part of an organ removed after a definitive procedure To extract useful information pathological evaluation proceeds according to a set of guidelines Simply reporting a diagnosis of cancer is inadequate Detailed additional information is needed so that the clinician can go on to establish a therapeutic plan as needed To best serve the patient close interaction between the clinician and the pathologist is vital In the field of urological pathology there are problems specific to this system Typically in the prostate because of its location there is little room for a surgeon to work to obtain adequate resection margins unlike with many other organs As a result questions arise such as What

constitutes an adequate surgical margin What is the significance of extraprostatic extension of neoplasm that is still inside the resection margin and What is the significance of neoplastic glands found on the resection margin marked with the ink It has been shown that a prostate needle core biopsy can generate much information that is immediately useful in predicting the extent of cancer in the prostate and consequently the outcome for the patient **Quantitative Health Research:**

better than anyone else Gigerenzer reports a study in which doctors were told the results of breast cancer screenings and then were asked to explain the risks of contracting breast cancer to a woman who received a positive result from a screening The actual risk was small because the test gives many false positives But nearly every physician in the study overstated the risk Yet many people will have to make important health decisions based on such information and the interpretation of that information by their doctors Gigerenzer explains that a major obstacle to our understanding of numbers is that we live with an illusion of certainty Many of us believe that HIV tests DNA fingerprinting and the growing number of genetic tests are absolutely certain But even DNA evidence can produce spurious matches We cling to our illusion of certainty because the medical industry insurance companies investment advisers and election campaigns have become purveyors of certainty marketing it like a commodity To avoid confusion says Gigerenzer we should rely on more understandable representations of risk such as absolute risks For example it is said that a mammography screening reduces the risk of breast cancer by 25 percent But in absolute risks that means that out of every 1 000 women who do not participate in screening 4 will die while out of 1 000 women who do 3 will die A 25 percent risk reduction sounds much more significant than a benefit that 1 out of 1 000 women will reap This eye opening book explains how we can overcome our ignorance of numbers and better understand the risks we may be taking with our money our health and our lives
