neurophysiologiques assurant les fondements et validant les modalités d'action de l'auriculotherapie. Après un panorama exhaustif en neuroanatomie, l'ouvrage aborde chaque zone d'action sur l'oreille en l'associant aux stratégies de soins issues de ses propriétés générales et particulières biophysiques, biochimiques, électrophysiologiques et somatotopiques. Les modalités thérapeutiques et les champs d'application dans de nombreuses spécialités médicales sont abordés. De même, l'action spécifique de l'auriculotherapie comme traitement complémentaire de la douleur et des addictions est exposée avec des exemples précis en cancérologie, tabacologie et gestion du stress. Cette 2e édition s'enrichit des dernières avancées en neurosciences. Ces acquis récents de la neurophysiologie et de la neuroimagerie ont permis d'identifier de nouveaux mécanismes et propriétés au sein des tissus et réseaux cérébraux. Ces connaissances permettent d'adapter les stratégies d'auriculotherapie pour une meilleure efficacité. L'auteur expose dans une nouvelle partie la dynamique informationnelle des circuits neurologiques, mécanisme du push-pull, le cheminement bimodal des fileries, mode de capture informationnelle qui permet notamment de diminuer certains effets constatés précédemment, le potentiel des relations neurofonctionnelles des lobes cérébraux. De nombreuses illustrations, photographies, schémas et dessins accompagnent les exposés fondamentaux et viennent enrichir la compréhension du corpus des connaissances.

Rational Points on Algebraic Varieties

Emmanuel Peyre, Yuri Tschinkel, 2001-10-01. This book is devoted to the study of rational and integral points on higher dimensional algebraic varieties. It contains research papers addressing the arithmetic geometry of varieties which are not of general type with an emphasis on how rational points are distributed with respect to the classical Zariski and adelic topologies. The book gives a glimpse of the state of the art of this rapidly expanding domain in arithmetic geometry. The techniques involve explicit geometric constructions, ideas from the minimal model program in algebraic geometry as well as analytic number theory and harmonic analysis on adelic groups. In recent years there has been substantial progress in our understanding of the arithmetic of algebraic surfaces. Five papers are devoted to cubic surfaces. Basile and Fisher study the existence of rational points on certain diagonal cubics. Swinnerton-Dyer considers weak approximation and Broberg proves upper bounds on the number of rational points on the complement to lines on cubic surfaces. Peyre and Tschinkel compare numerical data with conjectures concerning asymptotics of rational points of bounded height on diagonal cubics of rank 2. Kanevsky and Manin investigate the composition of points on cubic surfaces. Satgé constructs rational curves on certain Kummer surfaces. Colliot-Thélène studies the Hasse principle for pencils of curves of genus 1. In an appendix to this paper Skorobogatov produces explicit examples of Enriques surfaces with a Zariski dense set of rational points.
