Pharmacology

Drug Fundamentals, Plus the Most Frequently Prescribed Drug Classifications—including Indications, Reactions, Examples & More

definitions

- pharmacodynamics** Study of the mechanisms of action of drugs within the body and how drugs produce their effects in the body
- pharmacogenetics** Study of drug reactions in the body that are unanticipated or unusual, and may have a hereditary basis for the response
- pharmacokinetics** Study of drug actions as they move through the body; the way the body absorbs, distributes, metabolizes and excretes drugs; mathematical study of drugs based on time and dose
- pharmacology** Study of biologically active compounds, how they react in the body and how the body reacts to them
- pharmacotherapeutics** Study of drugs used to prevent, treat or diagnose disease
- pharmacy** Preparation and dispensing of drugs
- toxicology** Study of harmful or poisonous effects of drugs

drug names

DRUG

pharmacodynamics

Receptors

- Proteins molecules with one or more binding sites, located on cell membranes
- Receive a signal from the body's chemicals: neurotransmitters, hormones, enzymes
- Signal will cause a molecular event on the inside of the cell to occur
- Drugs Enhance (agonist)**, diminish (**partial agonist**) or block (**antagonist**) the generation, transmission or receiving of the signal
- Affinity** Attraction between a drug and a receptor
- High affinity** Drug will bind easily to the receptor
- Low affinity** Requires a higher concentration of the drug to get a therapeutic response

Drug Potency

- Amount of drug required to produce a therapeutic response

Dose Response Curve

- Effective Dose (ED)** Amount of drug that produces a therapeutic response in 50% of the people taking it
- Toxic Dose (TD)** Amount of drug that produces adverse effects in 50% of the people taking it
- Therapeutic Index (TI)** Margin of safety; ratio between the TD and the ED
- The higher the TI, the safer the drug is considered to be;** In general, nonprescription drugs have much higher TIs than prescription drugs

pharmacokinetics

Routes drugs take to get into the body

- Oral**
 - Enters the body through the GI tract
 - Taken by mouth, through the rectum, under the tongue or held in the cheeks
- Parenteral**
 - Enters the body through a different means (i.e., other than the GI tract)
 - Can be injected into the veins, arteries, muscles, spinal cord, or under the skin; inhaled through the lungs; transdermally through the skin via ointment or patch

Absorption

- Bioavailability** Percent absorbed into systemic circulation after administration
 - Bioavailability depends on route of administration as well as the drug's ability to cross membranes and reach its target
 - First Pass Effect:**
 - Drugs absorbed through the stomach and small intestine must pass through the liver before circulating systemically
 - Liver can inactivate the drug, making less of the drug available to reach the target organ
- Absorption** at cellular level occurs through passive transport, active transport, pinocytosis and facilitated diffusion

Distribution

- Influenced by several factors:**
 - Tissue permeability:** Ability of drug to pass through the membranes rapidly affects the extent to which the drug moves around in the body
 - Blood flow:** Once in the blood stream, will get to the organs and tissues that are highly perfused
 - Plasma proteins binding:** Drug can bind to a protein that will render the drug inactive; only an unbound drug can attach to the receptors
 - Binding to subcellular components
 - blood pH

Drug Storage Sites

- Adipose Tissue** Primary site; lipid-soluble drugs tend to remain for long periods of time due to low metabolic rates of drugs and poor blood perfusion of tissue
- Bone** Toxic agents like heavy metals
- Muscle** Binding can cause muscle to store drugs
- Organs** Liver and kidney

Metabolism

- Biotransformation** Chemical changes that occur in the drug following administration
- Metabolite** Altered version of the chemical compound
- Can have a higher or lower rate of activity than the original drug; if higher, drug is given as an inactive or prodrug form
- Prodrug** Requires metabolism or activation of drug in order for it to act within the body

Excretion

- First-order** Rate of removal of drug from the body is proportional to the concentration of the drug in the plasma
- Half-life** Time required to decrease the blood levels of a drug by one-half
- A one-time drug dosage will be eliminated almost completely by 5 half-lives
- A drug given on a continuous dosage schedule will reach steady state concentration after 5 half-lives
- Steady state** Rate of drug administration is equal to the rate of drug excretion
- Organs that excrete drugs:** Kidneys, lungs, sweat glands, mammary glands, salivary glands, skin and GI tract

schedule drugs

Schedule Class

Schedule 1: C-I

Schedule 2: C-II

Schedule 3: C-III

Schedule 4: C-IV

Schedule 5: C-V

Characteristics

- High abuse potential; not legal; no acceptable medical use; no prescriptions available
- High abuse potential and severe dependence liability; current, accepted medical use; prescription drug-aligned; not stamped prescription; 30-day supply; no refills
- Less abuse potential; low-moderate physical dependence; high psychological dependence; by prescription only; expires within 6 months; max. 5 refills on one script
- Less abuse potential than C-III drugs; accepted medical use; limited physical and psychological dependence; written or verbal prescription, expires in 6 months; max. 5 refills on one script
- Limited abuse potential; accepted medical use; small amounts of narcotics used as antitussives (cough medicine) or antidiarrheals; may not need a prescription but must be recorded as a transaction

Examples (C-I to C-IV)

- Heroin, LSD, cocaine, marijuana, methaqualone
- Opium, morphine, coca, methadone
- Amphetamines, codeine, barbiturates, Valium, Xanax, anabolic steroids
- Chloral hydrate, meperidine, paraldehyde, phenobarbital

Handbook of Drug-Nutrient Interactions Joseph I. Boullata, Vincent T. Armenti, 2004-04-17 Although there is a great deal of literature regarding drug-nutrient interactions (DNIs) there are limited sources of up-to-date comprehensive information The Handbook of Drug-Nutrient Interactions admirably fills this gap The editors Dr Joseph I. Boullata and Dr Vincent T. Armenti have a wealth of experience in this therapeutic area and have assembled a fine cadre of chapter authors who have individually contributed their high level of expertise As treatment for many diseases becomes increasingly complex with multiple drug therapies scheduled at varying times the need to identify clinically significant DNIs is an essential part of medication management This is a shared responsibility between health care professionals to interpret available data and individualize an approach to therapy that is compatible with the patient's disease state life stage and dietary intake Awareness of the significance of drug-food interactions is generally lacking Although many texts contain lengthy lists of possible interactions few data are provided for the clinician to gain an understanding of the mechanism of action of the interaction and subsequently apply the information to a particular patient or group of patients For example in the management of patients with HIV/AIDS who are taking complex prescribed drug regimens herbal products and nutritional supplements many of which are affected by dietary intake careful attention to DNIs is a critical component of therapy Clinicians need to take account of not only the well-documented interactions between drugs and nutrients but also the less obvious effects on drug-nutrient disposition and metabolism

Pharmacology for the Prehospital Professional Jeffrey S. Guy, 2019-05-30 Fully revised to meet current guidelines Pharmacology for the Prehospital Professional Second Edition offers a complete and practical understanding of pharmacology in the prehospital setting The Second Edition provides a unique problem-based approach to ensure that you as a prehospital provider are prepared to effectively administer the drugs your patients need Clinical scenarios present case information just as you will learn it in the classroom and encounter it in the field By placing each drug in its relevant context this text teaches you to identify the proper drug for a specific patient in a

specific situation This Second Edition includes Contextualized profiles of over 90 drugs used in prehospital care for quick identification at critical moments Problem oriented approaches to real scenarios encountered in the field Step by step procedural descriptions of pharmacologic processes commonly performed in the prehospital setting A Medication Math chapter that strengthens your dosage calculation skills Legal Aspects and Risk Management coverage to help you avoid common mistakes made in prehospital care Review questions that reinforce important chapter concepts and test your understanding
