The Utilization of Bioremediation to Reduce Soil Contamination: Problems and Solutions Václav Sasek, John A. Glaser, P. Baveye, 2012-12-06 Traditional reliance on chemical analysis to understand the direction and extent of treatment in a bioremediation process has been found to be inadequate Whereas the goal of bioremediation is toxicity reduction few direct reliable measures of this process are as yet available Another area of intense discussion is the assessment of market forces contributing to the acceptability of bioremediation Finally another important component is a series of lectures and lively exchanges devoted to practical applications of different bioremediation technologies The range of subjects covers a wide spectrum encompassing emerging technologies as well as actual full scale operations Examples discussed include landfarming biopiling composting phytoremediation and mycoremediation Each technology is explored for its utility and capability to provide desired treatment goals Advantages and limitations of each technology are discussed The concept of natural attenuation is also critically evaluated since in some cases where time to remediation is not a significant factor it may be an alternative to active bioremediation operations

Subcommittee on Investment, Jobs, and Prices,1987 **Environmental Forensics** R E Hester,R M Harrison,2008-06-27
Environmental forensics is a combination of analytical and environmental chemistry which is useful in the court room context It therefore involves field analytical studies and both data interpretation and modelling connected with the attribution of pollution events to their causes Recent decades have seen a burgeoning of legislation designed to protect the environment and as the costs of environmental damage and clean up are considerable not only are there prosecutions by regulatory agencies but the courts are also used as a means of adjudication of civil damage claims relating to environmental causes or environmental degradation As a result is the increasing number of prosecutions of companies who have breached regulations for environmental protection and in civil claims relating to harm caused by excessive pollutant releases to the environment Such cases can become extremely protracted as expert witnesses provide their sometimes conflicting interpretations of environmental measurement data and their meaning It is in this context that environmental forensics is developing as a specialism leading to greater formalisation of investigative methods which should lead to more definitive findings and less scope for experts to disagree Now a significant subject in its own right at least one journal devoted to the field and a number of degree courses have sprung up As a result of the topicality and rapid growth of the subject area is the publication of this book the 26th volume in the highly acclaimed Issues in Environmental Science and Technology Series This volume contains authoritative articles by a number of the leading practitioners across the globe in the environmental forensics field and aims

to cover some of the main techniques and areas to which environmental forensics are being applied The content is comprehensive and describes a number of the key areas within environmental forensics topics covered by the authors include Source identification issues Microbial techniques Metal contamination and methods of assigning liability The use of isotopes to determine sources and their applications Molecular biological methods Hydrocarbon fingerprinting techniques Oil chemistry and key compound identification The emerging role of environmental forensics in groundwater pollution Additionally the volume considers specific pollutants and long lived pollutants of groundwater such as halocarbons which have presented particular problems and which are described in some depth as well as the way in which chemical degradation processes can lead to compositional changes which provide valuable information The book provides a comprehensive overview of many of the key areas of environmental forensics written by some of the leading experts in the field It will be both of specialist use to those seeking expert insights into the field and its capabilities as well as of more general interest to those involved in both environmental analytical science and environmental law

Radiation Safety of Accelerator Based Radioisotope Production Facilities IAEA,2020-08-18 Radioisotopes are used worldwide in a range of medical industrial research and academic applications A large proportion of these radioisotopes are produced in particle accelerators and the number of institutions that operate linear accelerators or cyclotrons and manufacture and distribute radiopharmaceuticals for example is significant and increasing The production of radioisotopes using particle accelerators poses significant radiation hazards to workers members of the public and the environment when accelerators are operated without adequate radiation safety measures This Safety Guide provides practical guidance for implementing radiation protection and safety measures in such facilities involved in the production and use of radioisotopes

Immunization Safety Review Institute of Medicine,Board on Health Promotion and Disease Prevention,Immunization Safety Review Committee,2003-11-26 The Immunization Safety Review Committee was established by the Institute of Medicine IOM to evaluate the evidence on possible causal associations between immunizations and certain adverse outcomes and to then present conclusions and recommendations The committee s mandate also includes assessing the broader societal significance of these immunization safety issues While all the committee members share the view that immunization is generally beneficial none of them has a vested interest in the specific immunization safety issues that come before the group The committee reviews three immunization safety review topics each year addressing each one at a time In this fifth report in a series the committee examines the hypothesis that exposure to polio vaccine contaminated with simian virus 40 SV40 a virus that causes inapparent infection in some monkeys can cause certain types of cancer
