*Visualization in Mathematics, Reading and Science Education* Linda M.

Phillips, Stephen P. Norris, John S. Macnab, 2010-09-02 Science education at school level worldwide faces three perennial problems that have become more pressing of late. These are to a considerable extent interwoven with concerns about the entire school curriculum and its reception by students. The first problem is the increasing intellectual isolation of science from the other subjects in the school curriculum. Science is too often still taught didactically as a collection of pre-determined truths about which there can be no dispute. As a consequence many students do not feel any ownership of these ideas. Most other school subjects do somewhat better in these regards. For example in language classes students suggest different interpretations of a text and then debate the relative merits of the cases being put forward. Moreover ideas that are of use in science are presented to students elsewhere and then re-taught often using different terminology in science. For example algebra is taught in terms of  $x, y, z$  in mathematics classes but students are later unable to see the relevance of that to the meaning of the universal gas laws in physics where  $p, v, t$  are used. The result is that students are confused and too often alienated leading to their failure to achieve that extraction of an education from a scheme of instruction which Jerome Bruner thought so highly desirable.

Kreitz, JoAnn DeVries, 2013-04-03 Since the 1950s there has been a persistent shortage of sci-tech librarians and as more librarians retire or change positions the prospect looms that the profession will only depopulate further. Tackling this difficult challenge *Recruiting, Training, and Retention of Science and Technology Librarians* gathers together into one source the perspectives of top library administrators and managers as well as front-line librarians who present the latest research and practical strategies to find, train and keep those valuable specialized professionals. Several authors address the field's long-standing specialist vs generalist debate bringing new data and experience-driven perspectives to this challenging issue. Topics in *Recruiting, Training, and Retention of Science and Technology Librarians* include updating the cultural image of librarians to make the profession more appealing, a comprehensive literature review, how to cultivate candidates who are dedicated to service and love research and learning, practical approaches to improve the visibility and attractiveness of science librarianship, the skills and support needed to become a successful science librarian, an innovative program to recruit undergraduates, an in-depth survey of practicing science and technology librarians, the challenges of science librarianship in Africa, library and information science educators as recruiters for sci-tech librarians, creative strategies to recruit and retain librarians, adapting aspects of first-year student retention programs as a model for library retention programs, how professional competencies can be used for recruitment training and
