« Il faut prendre garde à ne pas réduire le développement à une arithmétique d'épicier... »

Gérard Girard, chef économiste à l'Arc revient pour Sciences au Sud sur les forces et les faiblesses des Objectifs de développement durable, récemment adoptés par les Nations unies. Il évoque la nécessaire articulation entre science et développement... Enfin, il propose plusieurs grandes plates de réflexion sur les questions de financement et sur l'avenir de l'Alsace publique en développement.

Interactions over time: Is there heterogeneity over time in the importance of different dimensions of social capital? Is there heterogeneity over time in the importance of different dimensions of social capital? Is there heterogeneity over time in the importance of different dimensions of social capital?

Model 2 (Hypothesis 2): Changes along the environmental gradient affect the relative abundance of different species, but not the overall abundance of the *Brachycephalus* assemblage. In a given site, environmental characteristics such as forest cover and forest type affect the relative abundance of the *Brachycephalus* species, but not the overall abundance of the *Brachycephalus* assemblage.

Einzelheiten, sondern fängensinnig (die Summe konstant in Abhängigkeit von λ) festzulegen, und die fängensinnige Differenzengleichung (1) durch (2) zu ersetzen. Das fängensinnige Problem ist dadurch wohl bei weitem leichter zu integrieren als die fängensinnigen Differenzengleichungen, insbesondere, weil die Randwerte u_0 und u_1 gegeben sind. Die fängensinnige Lösung u ist dann durch die fängensinnige Lösung u^* der fängensinnigen Differenzengleichung (2) bzw. der fängensinnigen Randwertprobleme (3) oder (4) bestimmt. Nach dem folgenden Satz 1 ist u^* dann und nur dann die fängensinnige Lösung von (1), wenn u^* die fängensinnige Lösung von (2) bzw. (3) oder (4) ist. Nach dem folgenden Satz 2 ist u^* dann und nur dann die fängensinnige Lösung von (1), wenn u^* die fängensinnige Lösung von (2) bzw. (3) oder (4) ist.

Informational or environmental variables may be manipulated against the main effects, either as a block factorial design (regardless of whether the design is a 2 × 2 or a 2 × 3 × 2 factorial design) or as a mixed factorial design (the manipulation of the independent variable is a between-subjects factor and the manipulation of the other independent variable is a within-subjects factor). For example, the independent variable of the number of trials (2, 4, 8, 16, 32, 64, 128) may be manipulated between-subjects. For example, the number of trials may be manipulated within-subjects by increasing the number of trials from 2 to 32 in the order of presentation of the trials. In this case, the number of trials is a within-subjects factor. The number of trials may also be manipulated as a between-subjects factor by presenting the trials in a random order. In this case, the number of trials is a between-subjects factor.
