ever increasing specialization it is important to gain a broad appreciation of science Entertaining and informative Scientifically Speaking A Dictionary of Quotations Second Edition contains the words and wisdom of several hundred scientists writers philosophers poets and academics The largest compilation of published sci **The Human Being as a Logical Thinker** Noel Balzer,2021-11-01 The aim of this book is to explain human rationality The fundamental principles of human thought are stated in terms of Balzer s Principles and their operations in everyday life are illustrated The natural numbers are defined and explained in a fresh fashion Paradoxes including those of class theory and material implication which have signaled that all is not well in our logical systems are laid to rest here The explanation of human rationality has more than logical interest for it touches upon the human values embedded in our rationality The book carries the message that all human beings are fundamentally equal **Psychological and Social Structures** Sandor B. Brent,2020-09-10 Originally published in 1984 this work is organised in three parts Each part consists of several related chapters Each chapter explores the assumptions and implications of a closely related group of concepts in depth Part 1 explores what a structure is It considers such notions as content context constraint unity integrity and the hierarchical and nucleate forms of organization

Part 2 critically explores the dynamic energetic conceptualization of psychological and social phenomena. Thus this part considers such notions as energy, entropy, activity, confirmation, discrepancy, and resistance as they apply to and affect the stability, activity, and changes observed in psychological and social structures. The relationship among the biological, metabolic, psychological, and social levels of analysis are explored from a rather simplified thermodynamic point of view. In Part 3, all these earlier considerations bear upon the processes by which these structures grow and develop. It explores the concept of development itself and such related issues as the levels-by-stages model of development, the distinction between intrastructural and intergenerational development, the orthogenic principles, the process of primordial differentiation and integration, development as a dialectical process, and the relationship between growth and development. The Epilogue indicates briefly some of the implications of the present thesis for future empirical and theoretical investigations.

Alexander Romanovich Luria Evgenia D. Homskey, 2013-11-11 Alexander Romanovitch Luria is widely recognized as one of the most prominent neuropsychologists of the twentieth century. This book, written by his long-standing colleague and published in Russian by Moscow University Press in 1992, fifteen years after his death, is the first serious volume from outside the Luria family devoted to his life and work and includes the most comprehensive bibliography available anywhere of Luria's writings.

Visual Intelligence Ann Marie Seward Barry, 1997-06-30 Today our environment is dominated by the visual. This book explores visual intelligence as a basic and indispensable tool of cultural survival. The author offers a practical manual on a non-superficial level for those who seriously want to know how images are processed, how they function in relation to our innermost beings, and how they form the psychological fabric of our political, social, and economic environment. Barry defines how we derive meaning from images and examines perceptual process, how it has evolved, and the role it plays in our thinking. She critically examines the concept of rationality and explores how visual logic works to create meaning. The book goes behind the obvious and beyond the superficial as it critically examines the visual power and logic of images cutting across a variety of areas: perceptual psychology, art, television, film, literature, advertising, and politics. The second section of *Visual Intelligence* examines the role which various media play in creating the images which impact our lives: how visual images create a language with profound psychological meaning and how print, television, and film media manipulate images to create desired emotional effects. Close-ups explore visual subtleties in such areas as digital manipulation, camera attitudes, and contextual framing, as well as the social consequences of image as an abstract concept expressed in concrete visual terms. Part III looks critically at the most controversial areas of image persuasiveness today: advertising, politics, and entertainment.
