**The Big Questions in Science and Religion** Keith Ward, 2008-05 Can religious beliefs survive in the scientific age Are they resoundingly outdated Or is there something in them of great importance even if the way they are expressed will have to change given new scientific context These questions are among those at the core of the science religion dialogue An Anglican priest who was once an atheist offers compelling insights into the often contentious relationship between diverse religious views and new scientific knowledge He identifies ten basic questions about the nature of the universe and human life Among these are Does the universe have a goal or purpose Do the laws of nature exclude miracles Can science provide a wholly naturalistic explanation for moral and religious beliefs Has science made belief in God obsolete Are there any good science based arguments for God Ward considers concepts from Buddhism Confucianism Taoism Islam Hinduism Judaism and Christianity while featuring the speculations of cosmologists physicians mathematicians and philosophers Scientific Explanation and Religious Belief Michael G. Parker, Thomas M. Schmidt, 2005 Contributions from an international conference held December 11 13 2002 at the Institute for Philosophy of Religion at the Johann Wolfgang Goethe University in Frankfurt

complementary and mutually illuminating accounts of religious belief and practice Cognitive science has gained much from an interdisciplinary focus on mental function and this volume explores the benefits that can be gained from a similar approach to the scientific study of religion

**Scientism** Mikael Stenmark, 2017-03-02 Can science tell us everything there is to know about reality The intellectual and practical successes of science have led some scientists to

think that there are no real limits to the competence of science and no limits to what can be achieved in the name of science. Accordingly, science has no boundaries; it will eventually answer all our problems. This view and similar views have been called Scientism. In this important book, scientists' views about science and its relationship to knowledge, ethics, and religion are subjected to critical scrutiny. A number of distinguished natural scientists have advocated Scientism in one form or another: Francis Crick, Richard Dawkins, Carl Sagan, and Edward O. Wilson, and their impressive impact both inside and outside the sciences is considered. Clarifying what Scientism is, this book proceeds to evaluate its key claims expounded in questions such as: Is it the case that science can tell us everything there is to know about reality? Can science tell us how we morally ought to live and what the meaning of life is? Can science in fact be our new religion? Ought we to become science believers? Stenmark addresses these and similar issues, concluding that Scientism is not really science but disguised materialism or naturalism; its advocates fail to see this, not being sufficiently aware that their arguments presuppose the previous acceptance of certain extra-scientific or philosophical beliefs.

**Science and Nonbelief** Taner Edis, 2007. In this wide-ranging overview, physicist and acclaimed science writer Edis examines the relationship between today's sciences and religious nonbelief. He provides a very readable, nontechnical introduction to the leading scientific ideas that impinge upon religious belief.
