Scientific Credibility And Technical Standards:

Scientific Credibility and Technical Standards in 19th and early 20th century Germany and Britain Jed Z.

Buchwald, 2012-12-06 The articles in this first volume of ARCHIMEDES explicitly and intentionally cross boundaries between science and technology and they also illuminate one another The first three contributions concern optics and industry in 19th century Germany the fourth concerns electric standards in Germany during the same period the last essay in the volume examines a curious development in the early history of wireless signalling that took place in England and that has much to say about the establishment and enforcement of standard methods in a rapidly developing technology that emerged out of a scientific effect Historical work over the last few decades has shown that technology cannot be characterized simply or even usually as applied science The beliefs the devices and the natural objects that are created or discovered by scientists often play altogether minor roles in the construction of technologies Taking this realization as a given the essays in Scientific Credibility and Technical Standards effectively argue that we must now seek to go beyond it we must also begin to think carefully about the role that science actually did play when it was explicitly deployed by technologists Scientific

Physicist, Modern Philosopher D. Baird, R.I. Hughes, Alfred Nordmann, 1998-01-31 The sub title of this symposium is accurate and in a curious way promises more than it states Classical Physicist Modern Philosopher Heinrich Hertz as the consummate experimentalist of 19th century technique and as brilliant clarifying critic of physical theory of his time achieved one of the fulfilments but at the same time opened one of the transition points of classical physics Thus in his popular lecture On the Relations Between Light and Electricity at Heidelberg in the Fall of 1889 Hertz identified the ether as henceforth the most fundamental problem of physics as the conceptual mystery but also the key to understanding mass electric ity and gravity Of Hertz s demonstration of electric waves Helmholtz told the Physical Society of Berlin Gentlemen I have to

communicate to you today the most important physical discovery of the century Hertz philosophizing in his direct lucid pithy style once wrote We have to imagine Perhaps this is metaphysics on the horizon In the early pages of his Principles of Mechanics we read A doubt which makes an impression on our mind cannot be removed by calling it metaphysical every thoughtful mind as such has needs which scientific men are accustomed to denote as metaphysical PM23 And at another place concerning the terms force and electricity and the alleged mystery of their natures Hertz wrote We have an obscure feeling of this and want to have things cleared up The Oxford Guide to the History of Physics and Astronomy J. L. Heilbron, 2005-06-03 The entries follow an elaborate organizational plan which amounts to a new classification of knowledge its institutional settings and its applications This plan is reprinted in the opening pages of the Guide Thoroughly cross referenced and accented with attractive black and white artwork no other source is as systematic and authoritative or as informative and inviting in its coverage of physics astronomy and planetary science BOOK JACKET

A History of Physical Theories of Comets, From Aristotle to Whipple Tofigh Heidarzadeh, 2008-05-23 Although the development of ideas about the motion and trajectory of comets has been investigated piecemeal we lack a comprehensive and detailed survey of physical theories of comets The available works either illustrate relatively short periods in the history of physical cometology or portray a landscape view without adequate details The present study is an attempt to review with more details the major physical theories of comets in the past two millennia from Aristotle to Whipple My research however did not begin with antiquity The basic question from which this project originated was a simple inquiry about the cosmic identity of comets at the dawn of the astronomical revolution how did natural philosophers and astronomers define the nature and place of a new category of celestial objects comets after Brahe's estimation of cometary distances It was from this turning point in the history of cometary theories that I expanded my studies in both the pre modern and modern eras A study starting merely from Brahe and ending with Newton without covering classical and medieval thought about comets would be incomplete and leave the fascinating achievements of post Newtonian cometology unexplored

Wrong for the Right Reasons Jed Z. Buchwald, A. Franklin, 2006-03-30 The rapidity with which knowledge changes makes much of past science obsolete and often just wrong from the present's point of view We no longer think for example that heat is a material substance transferred from hot to cold bodies But is wrong science always or even usually bad science The essays in this volume argue by example that much of the past's rejected science wrong in retrospect though it may be and sometimes markedly so was nevertheless sound and exemplary of enduring standards that transcend the particularities of culture and locale Leadership and Creativity Dong-Won Kim, 2013-04-18 Historical accounts of successful laboratories often consist primarily of reminiscences by their directors and the eminent people who studied or worked in these laboratories Such recollections customarily are delivered at the celebration of a milestone in the history of the laboratory such as the institution's fiftieth or one hundredth anniversary Three such accounts of the Cavendish Laboratory at the University of Cambridge have been recorded The first of these A

History of the Cavendish Laboratory 1871 1910 was published in 1910 in honor of the twenty fifth anniversary of Joseph John Thomson s professorship there The second The Cavendish Laboratory 1874 1974 was published in 1974 to commemorate the one hundredth anniversary of the Cavendish The third A Hundred Years and More of Cambridge Physics is a short pamphlet also published at the centennial of the 1 Cavendish These accounts are filled with the names of great physicists such as James Clerk Maxwell Lord Rayleigh J J Thomson Ernest Rutherford and William Lawrence Bragg their glorious achievements for example the discoveries of the electron the neutron and DNA and interesting anecdotes about how these achievements were reached But surely a narrative that does justice to the history of a laboratory must recount more than past events Such a narrative should describe a living entity and provide not only details of the laboratory s personnel organization tools and tool kits but should also explain how these components interacted within 2 their wider historical cultural and social contexts

Reader's Guide to the History of Science Arne Hessenbruch,2013-12-16 The Reader s Guide to the History of Science looks at the literature of science in some 550 entries on individuals Einstein institutions and disciplines Mathematics general themes Romantic Science and central concepts Paradigm and Fact The history of science is construed widely to include the history of medicine and technology as is reflected in the range of disciplines from which the international team of 200 contributors are drawn

The Historical Turn in Analytic Philosophy E. Reck,2013-03-27 During the last 25 years a large number of publications on the history of analytic philosophy have appeared significantly more than in the preceding period As most of these works are by analytically trained authors it is tempting to speak of a historical turn in analytic philosophy The present volume constitutes both a contribution to this body of work and a reflection on what is or might be achieved in it The twelve new essays by an international group of contributors range from case studies on individual philosophers Russell Carnap Quine and Ryle through discussions of broader themes in the history of analytic philosophy in logic and philosophy of language philosophy of mathematics epistemology philosophy of mind and psychology to related methodological reflections on the relationship between doing analytic philosophy and studying the history of philosophy on various forms of philosophical history and on their respective benefits

David Paul von Hansemann: Contributions to Oncology Leon P. Bignold,Brian L. D. Coghlan,Hubertus P.A. Jersmann,2007-02-15 In 1890 just a few years after the discovery of the chromosomes David Paul Hansemann a pathologist in training with the famous Rudolph Virchow in Berlin produced a theory of the pathogenesis of cancer involving the key current concept that the first change which occurs in cancer is an alteration of the hereditary material of a normal cell at the site where the cancerous process begins In the process of linking cancer to chromosomal material Hansemann coined the terms anaplasia and dedifferentiation These terms have remained the basis of descriptive terms concerning the microscopical appearances of

tumours ever since Nevertheless despite the popularity of his terminology Hansemann s ideas were attacked vigorously by almost all proponents of rival theories of the nature of cancer Partly due to these disputes during his life time and partly due to other factors interest in von Hansemann s ideas diminished during the twentieth century and his works are rarely mentioned today This book presents translations of all the relevant German texts and analyses the background and context of Hansemann s theories as well as the reasons why he was almost completely forgotten It shows that some of Hansemann s ideas may still be relevant to cancer research today and that he deserves to be remembered in relation to cancer as Vordenker unter den f hrenden Denkern seiner Zeit The foremost of the leading thinkers of his time

Revisiting Discovery and Justification Jutta Schickore, Friedrich Steinle, 2006-01-27 The distinction between the contexts of discovery and justification has left a turbulent wake in the philosophy of science This book recognizes the need to re open the debate about the nature development and significance of the context distinction about its merits and flaws The discussion clears the ground for the productive and fruitful integration of these new developments into philosophy of science

Engineers and the Making of the Francoist Regime Lino Camprubi, 2014-05-02 How engineers and agricultural scientists became key actors in Franco's regime and Spain's forced modernization In this book Lino Camprub argues that science and technology were at the very center of the building of Franco's Spain Previous histories of early Francoist science and technology have described scientists and engineers as working under Francoism subject to censorship and bound by politically mandated research agendas Camprub offers a different perspective considering instead scientists and engineers active roles in producing those political mandates Many scientists and engineers had been exiled imprisoned or executed by the regime Camprub argues that those who remained made concrete the mission of redemption that Franco had invented for himself This gave them the opportunity to become key actors and mid level decision makers within the regime Camprub describes a series of projects across Spain undertaken by the civil engineers and agricultural scientists who placed themselves at the center of their country's forced modernization These include a coal silo built in 1953 viewed as an embodiment of Spain's industrialized landscape links between laboratories architects and the national Catholic church and between technology and authoritarian control vertically organized rice production and research on genetics river management and the contested meanings of self sufficiency and the circulation of construction standards by mobile laboratories as an engine for European integration Separately each chapter offers a fascinating microhistory that illustrates the coevolution of Francoist science technology and politics Taken together they reveal networks of people institutions knowledge artifacts and technological systems woven together to form a new state
