Robben, Rick R. van Rijn, 2023-06-10 This excellently illustrated book now in a revised and extended second edition not only describes the radiological findings which can be found in child abuse cases but also places them in a forensic perspective a crucial aspect often underrepresented in radiological books The aim is to enable physicians involved in non accidental trauma cases to interpret radiological findings in light of the forensic circumstances under which these findings have arisen Accordingly the book will assist in determining whether a fracture is accidental or the result of abuse Fractures are addressed not only by anatomical location but also by trauma mechanism with careful attention to evidence regarding the reported mechanism and the clinical outcome Drawing on the latest literature the authors explain whether a particular form of trauma can cause a particular injury and identify where the reader can find the supporting evidence The book will be essential reading and a superb reference for all who are involved in the diagnosis of child abuse including pediatricians emergency room physicians and radiologists It will also be a valuable resource for legal medicine physicians lawyers and judges

Tumours in Children H. B. Marsden, J. K. Steward, 2012-12-06 Cancer in childhood is a rare disease but for many reasons attracts interest out of proportion to its frequency There is of course the parental anguish associated with a catastrophic illness in a son or daughter anguish shared in large measure by the physician This aspect no doubt has spurred on clinicians and investigators in their race to develop more effective means of treatment The rewards are great Not only is there the human element but there is also the fact that survival of the successfully treated child is measured in scores of years rather than the ordinary five to ten year survival rates cited for the adult Associated with this aspect of paediatric oncology is the responsibility to make those many years as trouble free as possible The challenge to the team organizing the care of children with cancer is clear Cure is to be obtained but not at the cost of progressively more severe somatic or psychic lesions as the child develops through adolescence to maturity The cured child of today must not become the chronically ill adult of tomorrow The spectrum of malignant diseases in childhood is not so varied as that of older patients The kinds of tumour seen in children are relatively few in number therefore concentrated attention can be focussed on each entity and specific strategies developed for clinical management
