Encyclopedia of the Scientific Revolution Wilbur Applebaum, 2003-12-16 With unprecedented current coverage of the profound changes in the nature and practice of science in sixteenth and seventeenth century Europe this comprehensive reference work addresses the individuals ideas and institutions that defined culture in the age when the modern perception of nature of the universe and of our place in it is said to have emerged Covering the historiography of the period discussions of the Scientific Revolution s impact on its contemporaneous disciplines and in depth analyses of the importance of historical context to major developments in the sciences The Encyclopedia of the Scientific Revolution is an indispensable resource for students and researchers in the history and philosophy of science

The World in a Crucible Sally Newcomb, 2009-01-01 Geology coalesced as a discipline in the early part of the nineteenth century with the coming together of many strands of investigation and thought The theme of experimentation and or instrument aided observation is absent from most recent accounts of that time which rely on an admixture of theory and field observations informed by close examination of minerals James Hutton emerged as the person who had it right with suggestion of a central heat source for Earth while Abraham Gottlob Werner and his Neptunist supporters were derided as being blinded by overarching belief as opposed to sober application of observed facts However despite several claims that Hutton had won the day primary literature from both England and the Continent reveals that the question was by no means settled for decades after Hutton derided information derived from looking into a little crucible This Special Paper makes the case that it was just those parameters of heat pressure solution and composition discovered in the laboratory that prevented resolution of the overriding questions about rock origin

Instrumental in War Steven Walton, 2005-05-01 Scientific research and instrumentation are crucial for military action today but they have not always been so This collection investigates 500 years of the relationship between warfare research and instruments both physical and intellectual to understand this interaction With U S English and French examples contributors provide examples from army and naval history to show how governments and individuals made warfare scientific developing instruments stations and organizations that furthered the cause Some developments directly aided war efforts others were parts of normal science in peacetime and others were relatively ineffective in directly bringing about military change These developmental histories shed light on the origins of modern scientific warfare Contributors Steven A Walton William A Lynch Jamel Ostwald Seymour H Mauskopf James R Fleming Gerard P Scharfenberger William M McBride David Alan Grier Sebastien Soubiran Kenton Kroker Deborah J Warner Peter Galison

Science, Culture, and Modern State Formation Patrick Carroll, 2006-10-02 This highly original groundbreaking study explores the profound relationship between science and government to present a new understanding of modern state formation Beginning with the experimental science of Robert Boyle in seventeenth century England Patrick Carroll develops the concept of engine science

to capture the centrality of engineering practices and technologies in the emerging mechanical philosophy He traces the introduction of engine science into colonial Ireland showing how that country subsequently became a laboratory for experiments in statecraft Carroll s wide ranging study spanning institutions political philosophy and policy implementation demonstrates that a number of new technological developments from cartography statistics and natural history to geology public health and sanitary engineering reveal how modern science came to engineer land people and the built environment into a material political state in an unprecedented way creating the modern state Shedding new light on sociology the history of science and technology and on the history of British colonial projects in Ireland from the seventeenth to the nineteenth centuries his study has implications for understanding postcolonial occupations and nation building ventures today and on contemporary dilemmas such as the role of science and government in environmental sustainability This highly original groundbreaking study explores the profound relationship between science and government to present a new understanding of modern state formation Beginning with the experimental science of Robert Boyle in seventeenth century England

Empires of Knowledge Paula Findlen, 2018-10-26 Empires of Knowledge charts the emergence of different kinds of scientific networks local and long distance informal and institutional religious and secular as one of the important phenomena of the early modern world It seeks to answer questions about what role these networks played in making knowledge how information traveled how it was transformed by travel and who the brokers of this world were Bringing together an international group of historians of science and medicine this book looks at the changing relationship between knowledge and community in the early modern period through case studies connecting Europe Asia the Ottoman Empire and the Americas It explores a landscape of understanding and misunderstanding nature through examinations of well known intelligencers such as overseas missions trading companies and empires while incorporating more recent scholarship on the many less prominent go betweens such as translators and local experts which made these networks of knowledge vibrant and truly global institutions Empires of Knowledge is the perfect introduction to the global history of early modern science and medicine
