Brown, John Gregory Frelinger, 2022-01-24 The explosion of basic and applied immunology in the first decades of the 21st century has brought forth new opportunities and challenges for immunology education at all academic levels from professional to undergraduate medical graduate and post graduate instruction Moreover developing methods and techniques for educating general audiences on the importance and benefits of immunology will be critical for increasing public awareness and support One major immediate challenge consists in accommodating within the confines of traditional immunology curricula a body of knowledge that continues to grow exponentially in both size and complexity Furthermore the practical toolbox of immunological research has vastly expanded and even in the present environment of highly interdisciplinary and collaborative science future immunologists will likely need to be at least conversant in for instance computational structural

and system biology nanotechnology and tissue engineering At the same time our perspective of the immune system has progressively developed from primarily a host defense mechanism to a fundamental homeostatic system with organism wide physiological and clinical significance and with potentially transformative biotechnological and therapeutic applications As a consequence in addition to stand alone courses immunology is increasingly integrated into other courses or distributed longitudinally throughout a multi year curriculum This necessitates inter disciplinary approaches to reach an expanding range of disciplines as diverse as neurobiology cancer biology oncology infectious diseases pharmacology orthopedics and bioengineering Creative approaches and pedagogical flexibility will be needed to avoid the pitfall of one size fits all instruction and to tailor level and discipline appropriate content to different types of students using multiple teaching formats Finally like most other disciplines immunology education is also under strong pressure to introduce new didactic strategies that are relevant and meaningful to a generation of students who are digital natives comfortable with and expect on demand and multi modal learning diversified sources and active engagement Thankfully the dynamic and interactive behavior of immune system cells now visualized with striking immediacy by in vivo imaging has the ability to capture and hold the interest of even the most jaded learner The need for an increasingly immunology knowledgeable workforce not just academic and industry scientists but also clinical and research lab technicians biomedical engineers and physicians in a growing array of specialties will also expand job opportunities for immunologists as educators and for content creators dedicated to generating new didactic tools in this field Acknowledgement We acknowledge the initiation and support of this Research Topic by the International Union of Immunological Societies IUIS

**Growing Spine** Behrooz A. Akbarnia,Muharrem Yazici,George H. Thompson,2010-12-31 Spinal disorders in very young  
 children may be caused by a variety of conditions The treatment of such conditions is often challenging due to the age of the  
 patient and the progressive nature of the deformity There also may be associated problems such as congenital anomalies  
 respiratory insufficiency and neurological problems Depending on the etiology of the deformity these children are often cared  
 for by multiple specialists including pediatricians pediatric orthopaedists or orthopaedic spine surgeons neurologists  
 pediatric surgeons pediatric neurosurgeons oncologists and or pulmonologists Health professionals in all of the mentioned  
 disciplines are involved in the management of these patients which is why compiling a comprehensive textbook that is not  
 limited to orthopedic specialists is essential This textbook will effectively help to standardize the care of these patients  
 Furthermore other professionals such as nurses physical therapists and healthcare professionals in training are usually not  
 familiar with these conditions and are in need of a reference book to consult when caring for children with spinal deformities
