Sir Charles Lyell's Scientific Journals on the Species Question Charles Lyell,1970 Lyell's Scientific Journals on the Species Question Charles Lyell,1970 **The Species Problem** Richard A. Richards,2010-07-01 There is long standing disagreement among systematists about how to divide biodiversity into species Over twenty different species concepts are used to group organisms according to criteria as diverse as morphological or molecular similarity interbreeding and genealogical relationships This combined with the implications of evolutionary biology raises the worry that either there is no single kind of species or that species are not real This book surveys the history of thinking about species from Aristotle to modern systematics in order to understand the origin of the problem and advocates a solution based on the idea of the division of conceptual labor whereby species concepts function in different ways theoretically and operationally It also considers related topics such as individuality and the metaphysics of evolution and how scientific terms get their meaning This important addition to the current debate will be essential for philosophers and historians of science and for biologists

Scientific Journals on the Species Question Charles Lyell,1970 *The Development of Darwin's Theory* Dov Ospovat,1995-04-28 In this highly acclaimed book Ospovat shows that Darwin's views changed radically from his first formulation of evolution to the publication of the full theory in 1859 *Handbook of Epistemology* I. Niiniluoto,Matti Sintonen,Jan Wolenski,2004-03-31 Epistemology or theory of knowledge has always been one of the most important if not the most important field of philosophy New arguments are constantly brought to bear on old views new variants are marshalled to revive ancient stands new concepts and distinctions increase the sophistication of epistemological theories There are a great many excellent textbooks monographs as well as anthologies consisting of articles in epistemology Similarly there are useful philosophical dictionaries which contain a great number of relatively short entries and general philosophical handbooks which also touch epistemological issues This volume of 27 essays grew out from the interest to see a handbook which is devoted entirely to the historical roots and systematic development of theory of knowledge It is not intended to compete but to supplement the already existing literature It aims at giving both beginners and more advanced students as well as professionals in epistemology and other areas of philosophy an overview of the central problems and solutions of epistemology The essays are self contained and still often rather extensive discussions of the chosen aspects of knowledge The contributions presuppose very little familiarity with previous literature and only a few of them require the mastery of even elementary logical notation This we hope makes the volume also accessible to the philosophically interested wider audience The contributors were asked to provide substantial up to date self contained and balanced surveys of the various subareas and more specific topics of epistemology with reference to literature Until Darwin, Science, Human Variety and the Origins of Race B Ricardo Brown,2015-10-06 This work fills a gap in recent studies on the history of race and science Focusing on both the classification systems of human variety and the development of science as the arbiter of truth Brown

looks at the rise of the emerging sciences of life and society biology and sociology as well as the debate surrounding slavery and abolition **The Age of Doubt** Christopher Lane,2011-01-01 The Victorian era was the first great Age of Doubt and a critical moment in the history of Western ideas Leading nineteenth century intellectuals battled the Church and struggled to absorb radical scientific discoveries that upended everything the Bible had taught them about the world In The Age of Doubt distinguished scholar Christopher Lane tells the fascinating story of a society under strain as virtually all aspects of life changed abruptly In deft portraits of scientific literary and intellectual icons who challenged the prevailing religious orthodoxy from Robert Chambers and Anne Bronte to Charles Darwin and Thomas H Huxley Lane demonstrates how they and other Victorians succeeded in turning doubt from a religious sin into an ethical necessity The dramatic adjustment of Victorian society has echoes today as technology science and religion grapple with moral issues that seemed unimaginable even a decade ago Yet the Victorians crisis of faith generated a far more searching engagement with religious belief than the new atheism that has evolved today More profoundly than any generation before them the Victorians came to view doubt as inseparable from belief thought and debate as well as a much needed antidote to fanaticism and unbridled certainty By contrast a look at today s extremes from the biblical literalists behind the Creation Museum to the dogmatic rigidity of Richard Dawkins s atheism highlights our modern day inability to embrace doubt Oswaal CBSE Question Bank Class 11
